

A Treg suppressive curves, raw data from 3 patients

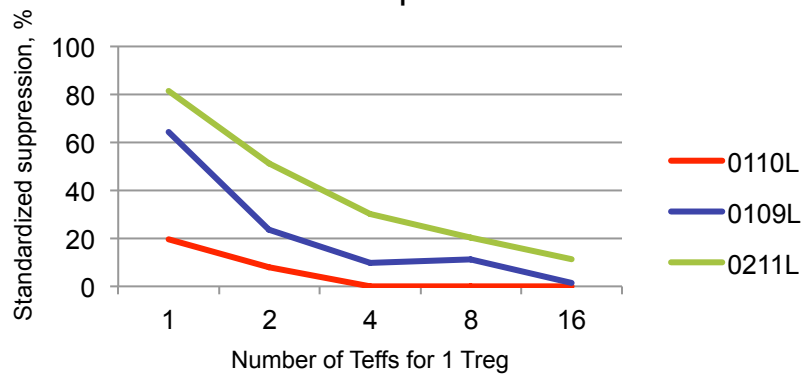

B Standardized suppression = $\frac{(\% \text{ div. without Tregs} - \% \text{ div. at current ratio})}{\% \text{ of div. without Tregs}} \times 100$

An example of calculation for Tregs from patient 0211L

N of Teffs for 1 Treg	Divisions of Teffs, %	Standardized suppression, %
1	13.46	81.28
2	35.05	51.27
4	50.31	30.05
8	57.32	20.30
16	63.78	11.32
No Tregs	71.92	0

C Standardized suppression curves, data from 3 patients

D Area under curve (AUC) for Tregs from 0211L patient

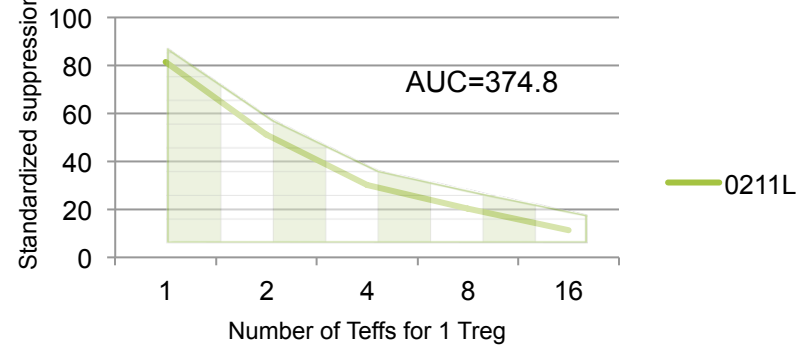

Figure S1

Abnormal patterns of FOXP3 expression in Tregs of Tx recipients

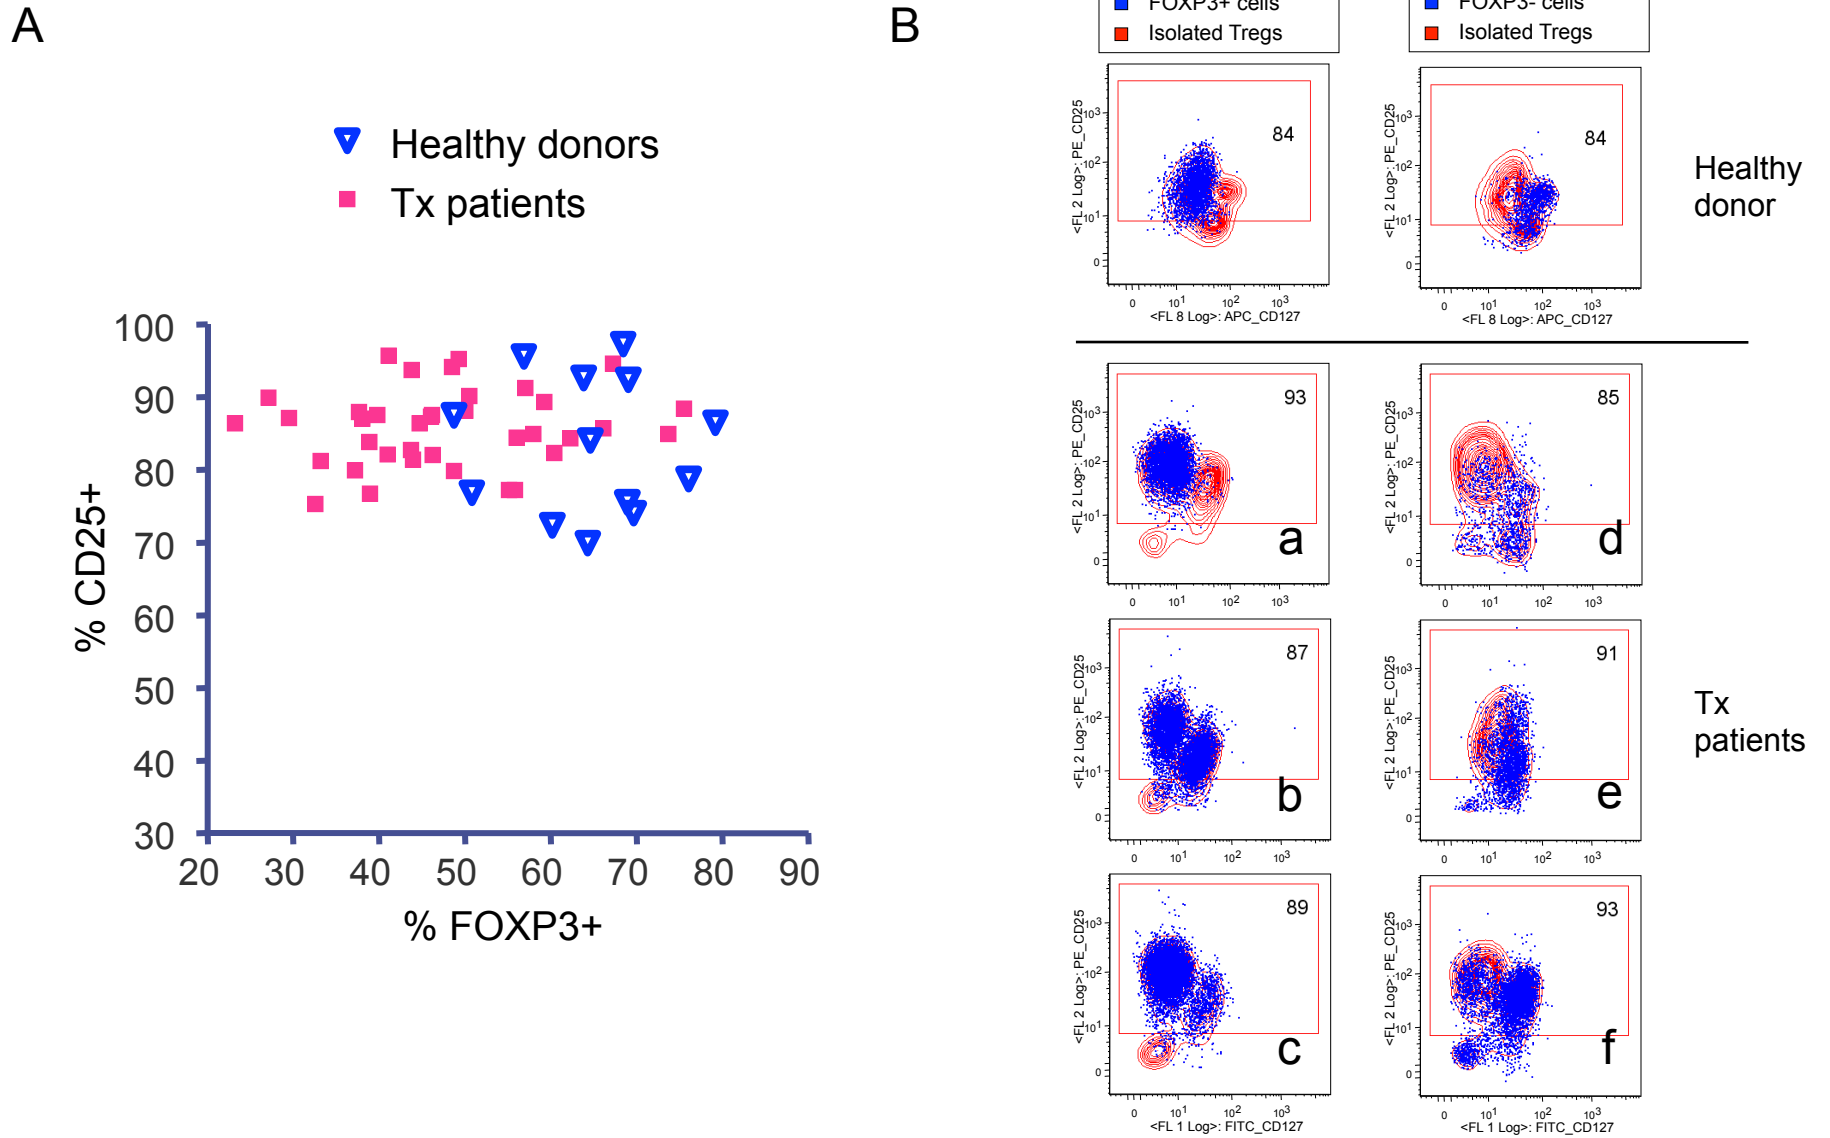

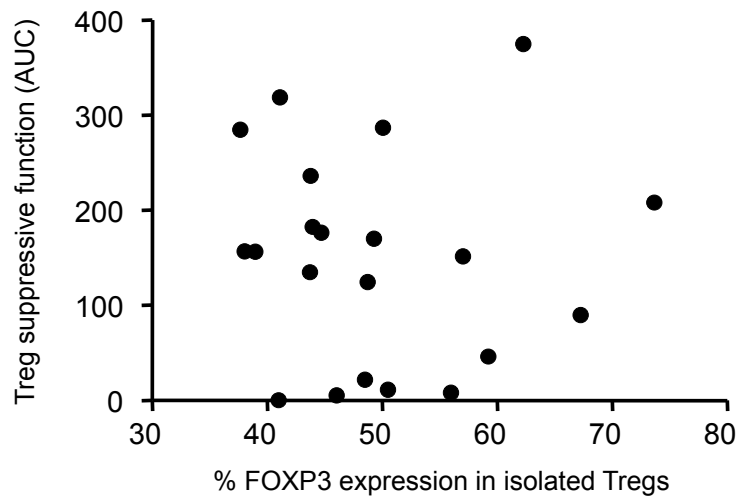

Figure S2

Lack of correlation between Treg expression of FOXP3 and their suppression of normal CD4 T cell proliferation

Lack of correlation between Treg expression of FOXP3 and their suppression of normal CD8 T cell proliferation

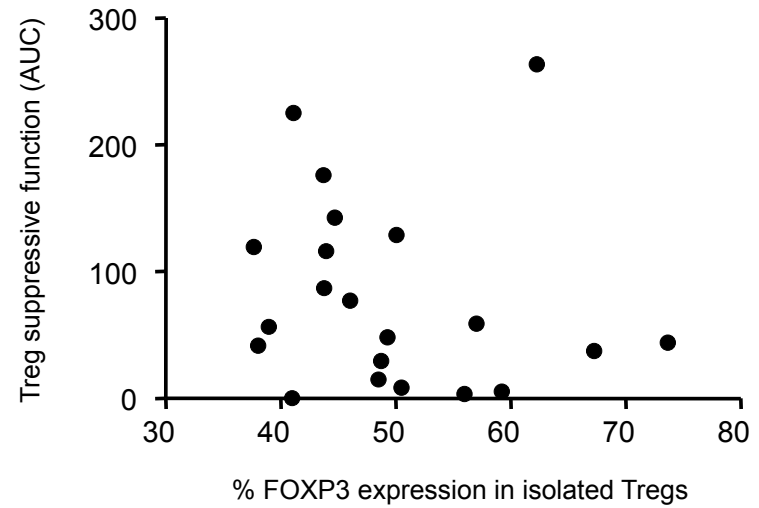

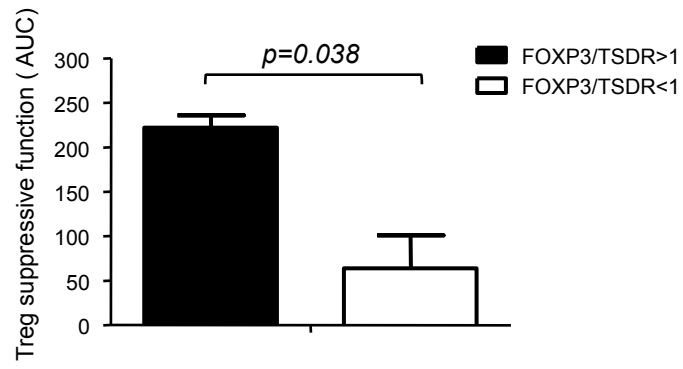

Figure S3

A Tregs with FOXP3/TSDR ratio >1 are more suppressive

B Tregs with FOXP3/TSDR ratio >1 have higher CTLA4+ expression

Figure S4
