

SUPPLEMENTARY FIG. S5. Synthetic TP upregulate protein levels of Nrf2/ARE genes in the ventral mid-brain. Western blot analysis (A) and densitometry analysis (B) showing relative changes of Nrf2 and downstream ARE proteins in ventral midbrain after TP-319 and TP-500 administration. Bars represent mean \pm SEM. * $p < 0.05$ compared to controls ($n = 5$ /time point).
