

Supplementary information, Figure S3

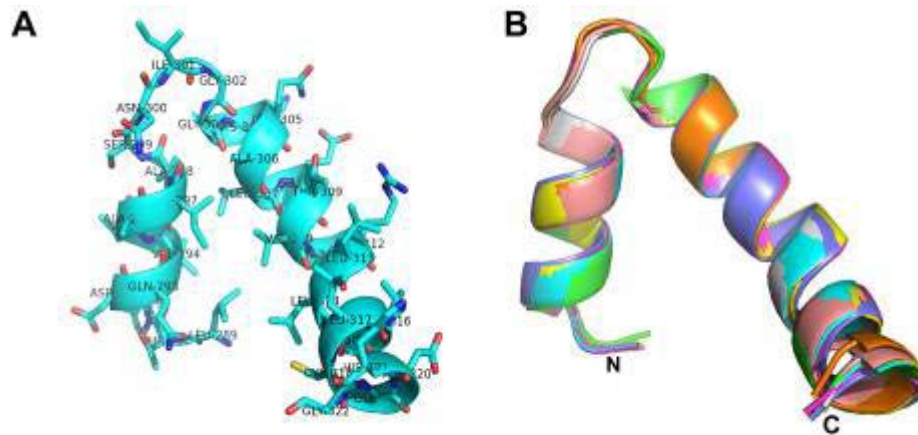

Figure S3 The structure of dTale2 repeats. **(A)** The overall structure of dTale2 first repeat is formed by two α -helices with the RVD loop as the intervening linker, the 34 residues are labeled. **(B)** All 8 repeats of dTale2 reveal an almost identical conformation (shown as cartoon representation). Molecular graphics figures were prepared with PyMOL (<http://www.pymol.org/>).
