

Supplemental figure 1

Local sequence alignment of *Arabidopsis* 20 MAPKs.

Alignment was performed using ClustalX. Homologous position of MPK6 Y144 residue is shown in orange. Homologous positions of MPK6 D218 and E222 residues are shown in blue. MPK6 sequence is in red.

Accession number for the sequences: At1g10210 (MPK1), At1g59580 (MPK2), At3g45640 (MPK3), At4g01370 (MPK4), At4g11330 (MPK5), At2g43790 (MPK6), At2g18170 (MPK7), At1g18150 (MPK8), At3g18040 (MPK9), At3g59790 (MPK10), At1g01560 (MPK11), At2g46070 (MPK12), At1g07880 (MPK13), At4g36450 (MPK14), At1g73670 (MPK15), At5g19010 (MPK16), At2g01450 (MPK17), At1g53510 (MPK18), At3g14720 (MPK19), and At2g42880 (MPK20).

Supplemental table 3

Plasmids used in this study.

Name	Description	Origin
pDR195gtw	Yeast strong expression vector	Oomen <i>et al.</i> , 2009. New Phytol. 181:637-50
pDEST17	Expression of His tagged protein in Coli	Invitrogen
Peri-HIS-MBP	Expression of Peri-His-MBP tagged protein in Coli	Nallamsetty <i>et al.</i> , 2005. Protein Sci. 14:2964-71
pDEST22	Yeast 2 hybrid vector	Invitrogen
pDEST32 modified	Yeast 2 hybrid vector	Modified from invitrogen to carry a Kanamycin Resistant gene
