<sup>a</sup>GSHU *lys2::AluIR* contains the GSHU cassette (including the I-*SceI* gene under the inducible *GAL1* promoter, the hygromycin resistance gene *hyg*, and the counterselectable marker gene *KIURA3*) and the I-*SceI* site (HOT site) in *TRP5*.

<sup>b</sup>A3-UR amplicon cassette derivative from YRpKM1 plasmid containing an autonomous replicating sequence (*ARS1*), bacterial origin of replication (ORI), ampicillin resistance gene (*Amp*<sup>R</sup>), the green fluorescence protein (GFP) gene and the split *URA3* gene (A3-UR).

<sup>c</sup>*LEU2* is integrated downstream of UR.

<sup>d</sup>GSHdw cassette (including the I-*SceI* gene under the inducible *GAL1* promoter and *hyg*) and the I-*SceI* (HOT) site are integrated 10 kb downstream of the UR sequence.

<sup>e</sup>GSHup cassette (including the I-*SceI* gene under the inducible *GAL1* promoter and *hyg*) and the I-*SceI* (HOT) site are integrated 10 kb upstream of the A3 sequence.

<sup>f</sup>Single deletion strains contain the *kanMX4* module in place of the chosen gene, and are all derivatives of KM-201,203 or KM-221,222 strains.
