

Low dose induced cellular function (top 10)

inflammatory response
defense response
immune system process
response to wounding
immune response
response to stimulus
response to stress
blood coagulation
coagulation
regulation of immune effector process

Low dose reduced cellular function (top 10)

IL7 receptor activity
IL7 binding
2'-5'-oligoadenylate synthetase activity
negative regulation of T cell mediated cytotoxicity
positive regulation of T cell differentiation in the thymus
cAMP response element binding protein binding
negative regulation of leukocyte mediated cytotoxicity
negative regulation of T cell mediated immunity
negative regulation of cell killing
fibrinogen complex
