Daily kinetics of autofluorescence in downy mildew infected grapevine leaves

Supplementary Fig. S1. Images of sporulating leaves before and after removal of sporangiophores. Images of the abaxial side of an attached *V. vinifera* leaf before (top) and after sporangiophores were washed off (bottom). Left column, white-light transmission images; middle column, UV-excited visible autofluorescence images; right column, blue-excited green autofluorescence. Bar, 500 μm .
