

SUPPLEMENTARY FIG. S5. Venn diagrams comparing gene lists of up- or downregulated genes (1.5-fold cutoff vs. MEFs) in iPS1, iPS2, and OF. *P* values for 2- way overlap between conditions include overlapping genes between the 2 indicated cell types and also include genes common to all cell types. All regions of overlap were found to be significant to $P < 0.0001$. OF, oncogenic foci.
