Table S1 Details of TRIM proteins included in the study. All TRIM expression constructs obtained from Reymond et al 2001, Sebastian Nisole and cDNA were in pcDNA3. The cDNA was from mix of RNA samples obtained from PRR agonist-stimulated THP-1, PBMC derived macrophages and dendritic cells. Constructs from Open Biosystems (OB: Catalog number) were in or cloned into pCMVSPORT6 (**). The subgroup column denotes the assigned class [1-11 or unclassified (UC)] for each TRIM based on classification carried out by Short and Cox 2003. Key: Rh, Macaca mulatta; R, Really interesting new gene domain; BB, Bbox 1 and 2; PRY/SPRY, SPLa/RYanodine domain; BROMO, Bromodomain; CC, Predicted Coiled Coil domain; COS, C-terminal subgroup one signature; FN3, Fibronectin III like domain; FIL, Filamin-type immunoglobulin domain; MATH, Meprin and TRAF homology domain; NHL, NHL repeat; PHD, Plant homeodomain; TM, Transmembrane domain; PYR, pyrin; ARF, ADP ribosylation factor like.

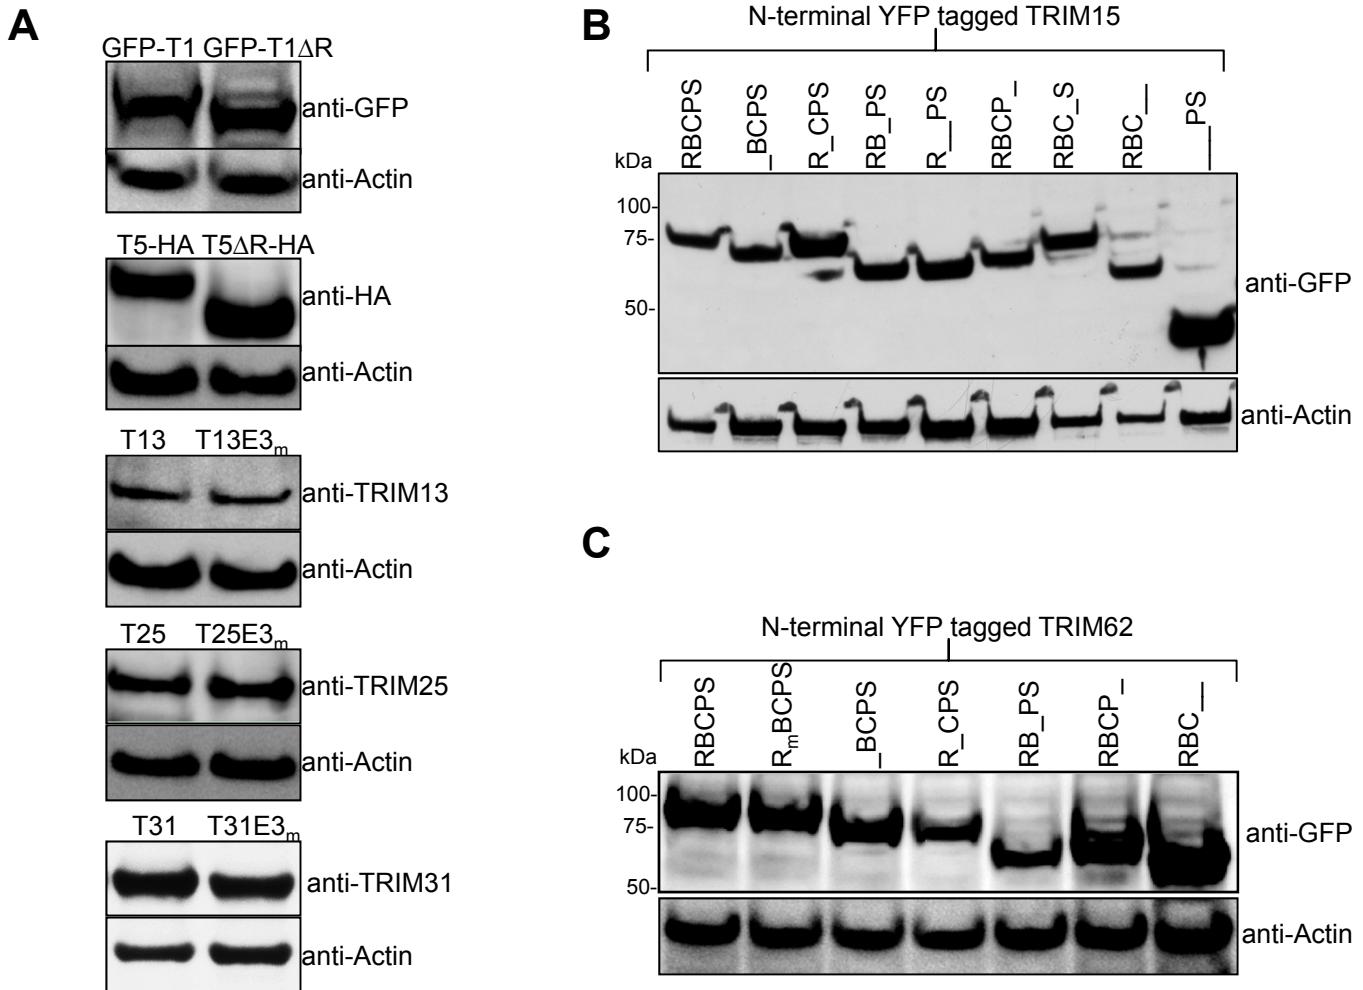

FIG S1 Expression analysis of TRIM proteins and their derivatives. (A) Western blot analysis of HEK293 cell lysates expressing indicated tagged or untagged TRIM proteins and their RING domain deleted (Δ R) or E3 mutant (E3 $_m$) versions 24 h post transfection with 50 ng of TRIM expression constructs using specified antibodies. Western blot analysis of HEK293 cell lysates expressing N-terminal YFP tagged versions of TRIM15 (B) and TRIM62 (C), 24 h post transfection with 50 ng of TRIM expression constructs using specified antibodies. R, B, C, P and S represent the RING, B-Box, Coiled coil, PRY and SPRY domains. The E3 ligase inactive mutant (C11A/C14A) is denoted as R $_m$. Actin was used as loading control.

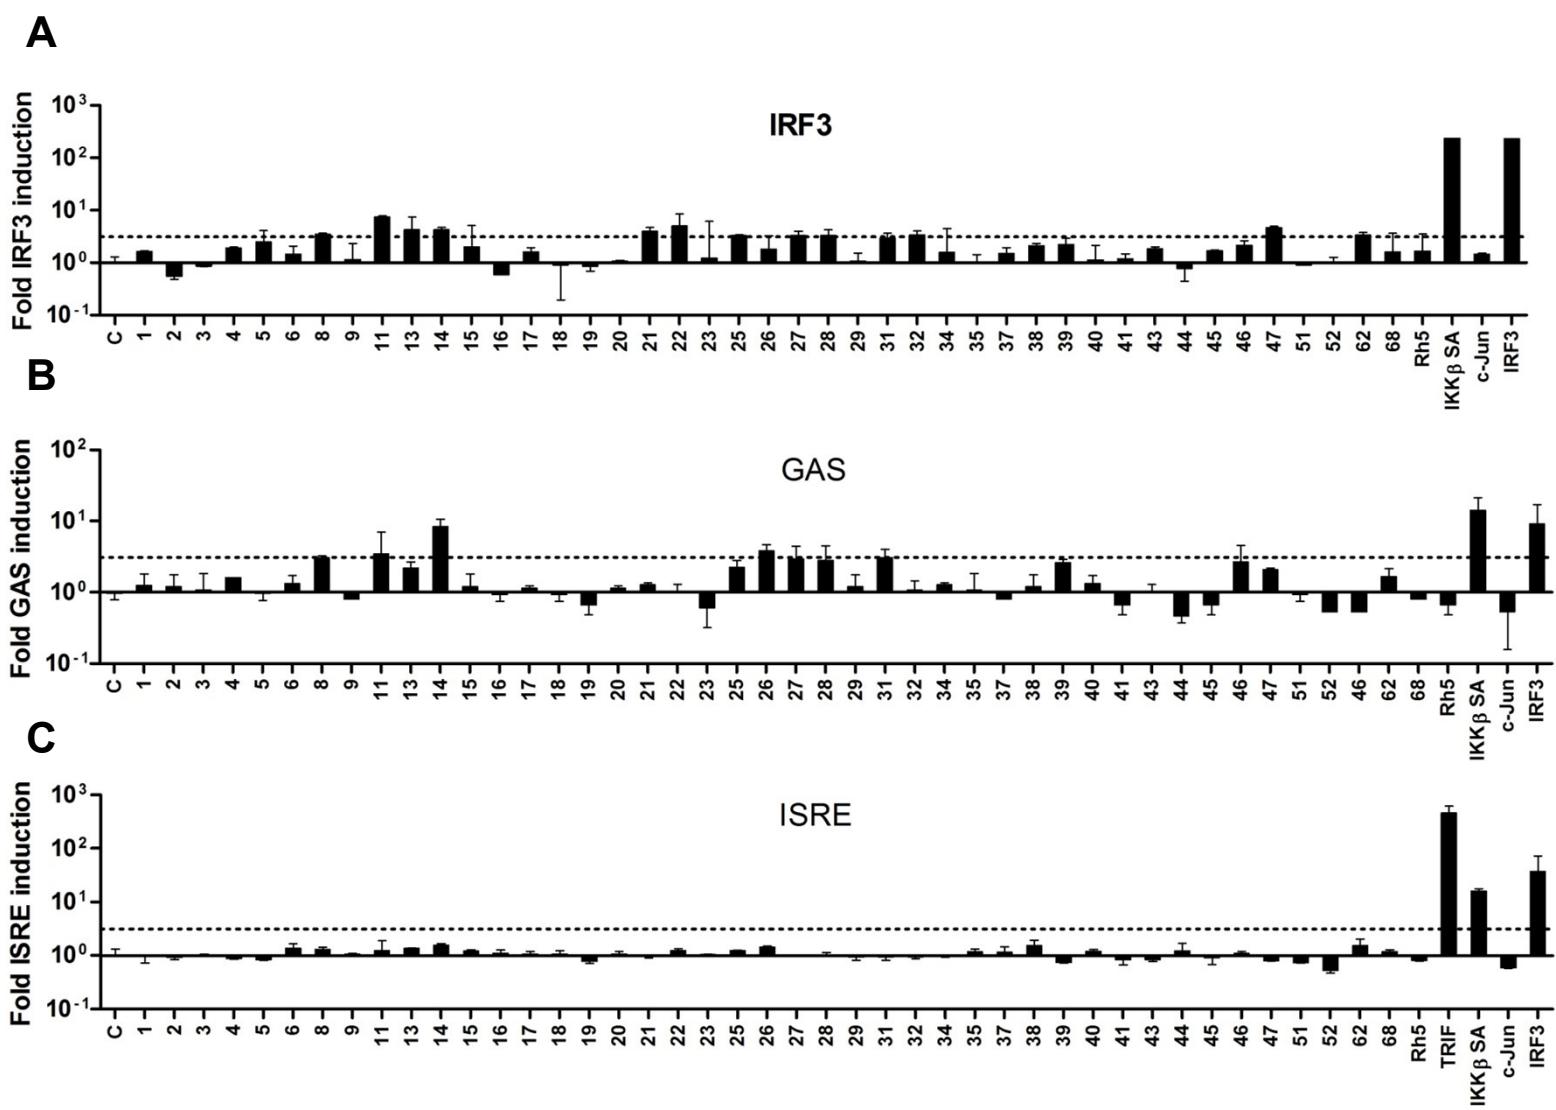

FIG S2 A screen for TRIM expression mediated induction of interferon-related luciferase reporters. (A-C) HEK293 cells were transfected with 5 or 25 ng of plasmids expressing indicated TRIM proteins, bona fide inducers, renilla luciferase and IRF3, Gamma activation sequence (GAS) or Interferon Stimulated Responsive Element (ISRE) firefly luciferase reporter construct and luciferase activities measured at 48 h post transfection. Firefly luciferase were normalized to Renilla luciferase readings in each well, and the data plotted as fold-change compared to empty pcDNA/vector (+/- the standard deviation) for at least two triplicate experiments carried out on separate days. 95% significance cut-off values (3.1 for IRF3, 2.3 for GAS and 2.5 for ISRE) were determined based variations in values obtained for empty vector samples.
