

S2A. Clustal alignment of GcvB in Enterobacteriaceae

S2B. Complementarities between *gcvB* sRNAs and *phoP* mRNAs of several enterobacterial families.

The complementarities were found with the Mfold program using the default parameters and GcvB sequences in the R3 region and *phoP* sequences from -90 to +30 (+1 being the first nt of the translation initiation codon). In some cases, complementarities were lengthened by eye (in blue). The Shine-Dalgarno sequence and the initiation codon are in red. The maximum continuous complementarity length is given under each sequence.
