

Supplemental Figure S5. Effects of stability of Ams2 on genotoxic stresses.

Asynchronous WT *myc-ams2⁺* (HYY908), *myc-ams2-dKm* (HYY909), *pof3 Δ* (HYY1054), *pof3 Δ myc-ams2-dKm* (HYY1067) and *pof3 Δ myc-ams2⁺* (HYY1094) cells were spotted with decreasing cell number onto rich medium containing various DNA damaging agents and incubated at 30°C for 4 days. 4 μ M camptothecin (CPT), 3 mM hydroxyurea (HU) and 0.005% MMS were used as DNA damaging agents.
