

Supplemental Table 1. Serial Categorical Change in Ulceration Severity

1a. Categorical change in ulceration from Baseline to W10

Ulceration category at Week 0	Improvement at Week 10	No change at Week 10	Worsening at Week 10
Deep (n=72)	36 (51%)*	35 (49%)	NA
Superficial (n=6)	0	5 (83%)	1 (17%)

*32 from deep to superficial and 4 from deep to absent. One patient with deep ulceration had no ulceration observed at Week 10 but could not be categorized as absent because not all segments were evaluated

1b. Categorical change in ulceration from W10 to W54

Ulceration category at Week 10	Improvement at Week 54	No change at Week 54	Worsening at Week 54
Deep (n=24)	7 (29%)*	17 (71%)	NA
Superficial (n=25)	5 (20%)	15 (60%)	5 (20%)
None (n=4)	NA	2 (50%)	2 (50%)†

*All 7 from deep to superficial, †Both from absent to superficial
