Potential use of Folate-appended Methyl- β -Cyclodextrin as an Anticancer Agent

Risako Onodera, Keiichi Motoyama, Ayaka Okamatsu, Taishi Higashi and Hidetoshi Arima

Graduate School of Pharmaceutical Sciences, Kumamoto University, 5-1 Oe-honmachi, Chuo-ku, Kumamoto 862-0973, Japan.

Supplementary Figure 1. DNA content (A) and mitochondrial transmembrane potential (B) in the presence of M-β-CyD in A549 Cells (FR (-)). A549 cells were treated M-β-CyD for 2 h. Thereafter, cells were treated with PI or rhodamine 123, then the percentage of cells showing DNA content and mitochondrial transmembrane was quantified by flow cytometry. Each value represents the mean \pm S.E.M. of 3-4 experiments. * $p < 0.05$, compared with control.
