

# OptiTope

Target Antigens	Target Population	Constraints	Results
-----------------	-------------------	-------------	---------

In this final step the optimization problem is summarized and the results are displayed. 

## Input summary

Number of candidate epitopes: 2930  
 Number of target alleles: 19  
 Number of antigens: 10  
 Prediction method: BIMAS

## Constraints

Maximum number of epitopes to select = 10  
 Epitope conservation  $\geq$  20.0 %  
 Covered alleles  $\geq$  10  
 Covered antigens  $\geq$  5

## Results

[Click here for more information](#)

Selected epitopes: 10  
 Covered alleles: 10 of 19  
 Covered antigens: 5 of 10  
 Locus coverage:

A	54.01 %
B	19.87 %
Cw	35.11 %

Population coverage: 94.28 %

Epitope	Fraction of overall immunogenicity	Covered alleles	Covered antigens
