Figure S8

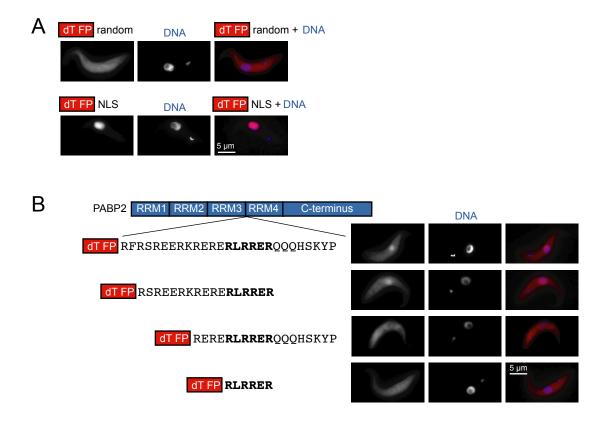

Figure S8

A+B) Inducible expression of double tomato fluorescent protein (dTFP) fused to different fragments of the region of PABP2 that lies between RRM3 and RRM4 and contains the predicted NLS (**B**). A random sequence as well as the NLS of the LA protein (Marchetti et al., 2000) served as negative and positive controls, respectively (**A**).

Marchetti MA, Tschudi C, Kwon H, Wolin SL, Ullu E (2000) Import of proteins into the trypanosome nucleus and their distribution at karyokinesis. J Cell Sci 113 (Pt 5): 899-906.
