

Supporting Information Figure S3. The AM inhibits the growth and induces apoptosis of human prostate carcinoma PC-3 cells in vitro. A, The effect of 48h or 72h treatment with the indicated concentration of CM or AM on cell proliferation as measured by WST-1 assay. * $P < 0.05$; ** $P < 0.001$ (ANOVA). B, Percentage of live (Annexin V⁻/PI⁻), early apoptotic (Annexin V⁺/PI⁻) and late apoptotic (Annexin V⁺/PI⁺) cells after treatment with CM or AM. ** $P < 0.001$ (ANOVA). Data are presented as mean \pm SEM of three independent experiments.
