

Supplementary material for ‘Multiple binding modes for palmitate to barley lipid transfer protein facilitated by the presence of proline 12’.

Comparison of r^{-3} averaged distances calculated from the simulation trajectories with the 25 inter-proton distances between palmitate and barley LTP derived from the experimental NOE cross-peak intensities. In each case the difference between the distance averaged over the simulation and the corresponding NMR-derived upper distance bound is listed (in nm). A negative value indicates that the distance in the simulation is shorter than the NMR-derived upper distance bound and so there is no violation. The data for the 1be2 NMR structure are given for comparison.

NOE number	Atom 1	Atom 2	NMR structure	WT_LA_310	WT_LA_NOE_310	WT_LAHL_310	WT_LB_NOE_400	M12_LAHL_310	M12,70_LAHL_310
