

Supplemental Figure 1

Supplemental Figure 1: Dose response of LeTx-induced IL-1 β release in MH-S cells. MH-S cell cultures were treated with increasing concentrations of LeTx as shown (0, 100, 500, 1000ng/ml). Released IL-1 β was measured by ELISA (R&D Systems, Minneapolis, MN) in duplicates following 5hr treatment. Each value represents the mean \pm SEM of data from three experiments done with duplicate macrophage cell cultures on three separate days.
