

Supplementary information, Figure S13

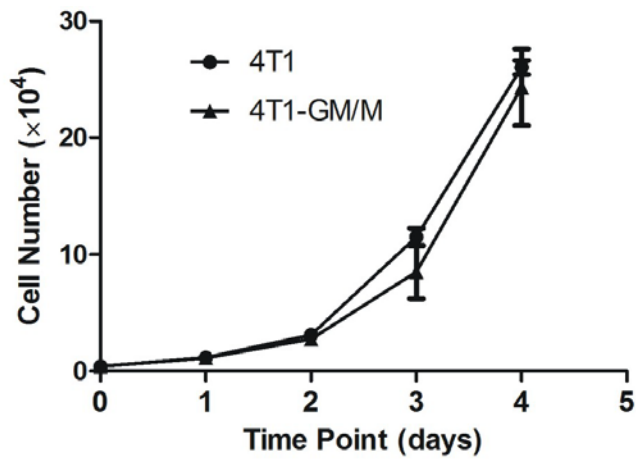

Figure S13 *In vitro* cell growth of 4T1 and 4T1-GM/M. Cells were plated in 24-well tissue culture plates at a density of 1.5×10^3 cells/well. Cells in each treatment group were plated in sextuplicates and cultured for 5 days. Cells were harvested by trypsinization at 24h intervals and stained with 4% trypan blue. Viable cells were counted with a hemocytometer.
