

Supplementary information, Table S1

Table S1 Concentration of GM-CSF, M-CSF and G-CSF in murine serum

	GM-CSF (pg/ml)	M-CSF (pg/ml)	G-CSF (pg/ml)
Tumor-free ^a	2.42±0.01	76.20±8.76	3.07±0.38
Tumor-bearing ^b	246.40±38.95	1474.55±102.33	8531.29±143.34

a. 6~8 weeks old female WT mice were chosen.

b. 4T1 tumor cells were injected into the mammary gland of female WT mice. When tumor diameter reached about 15 mm, mice were sacrificed and GM-CSF, M-CSF and G-CSF level in the serum were measured by ELISA. Each group had three mice.
