

Figure S4: HA does not induce cardiogenic gene expression of MNCs under hypoxic condition. Cardiogenic gene expression of bone marrow mononuclear cells cultured on different coating materials under hypoxia were analyzed by real-time RT-PCR after 2 days. Data are presented as mean \pm SEM. * $P < 0.05$, ** $P < 0.01$, *** $P < 0.001$. $n = 4$ per group.
