Supplementary Figure

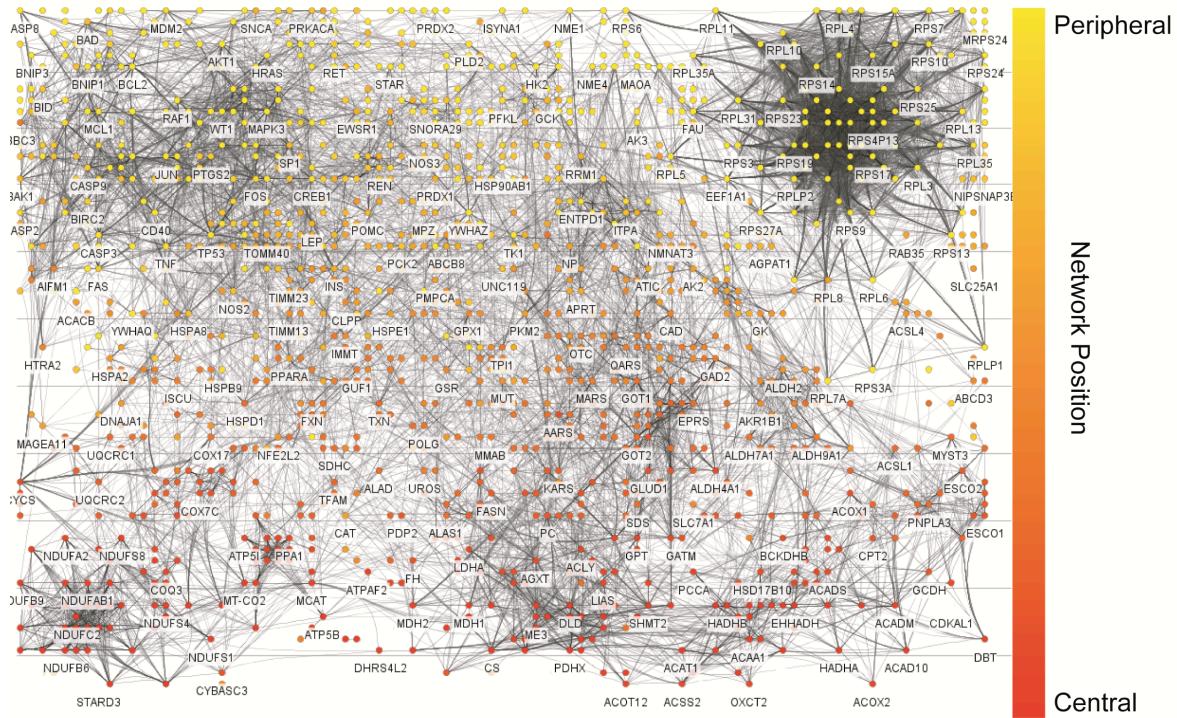

Figure. S1. Spatial organization of the MPF network according to network position.

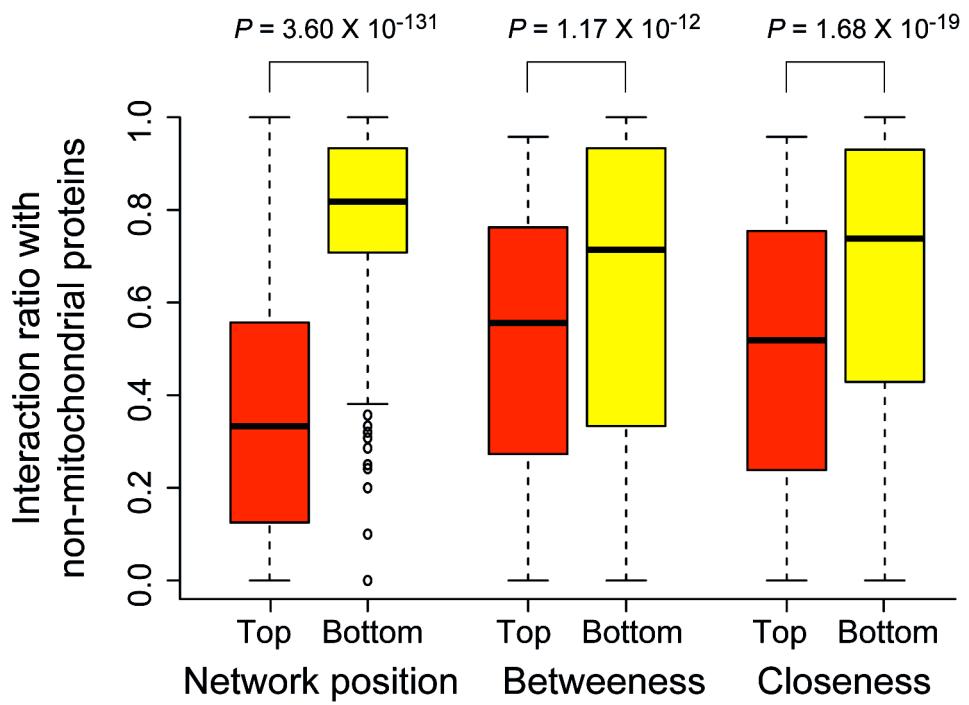

Figure. S2. Comparison of the interactions with non-mitochondrial protein partners. Top represent the top 50% of central proteins, whereas bottom represents the bottom 50 % of peripheral proteins.

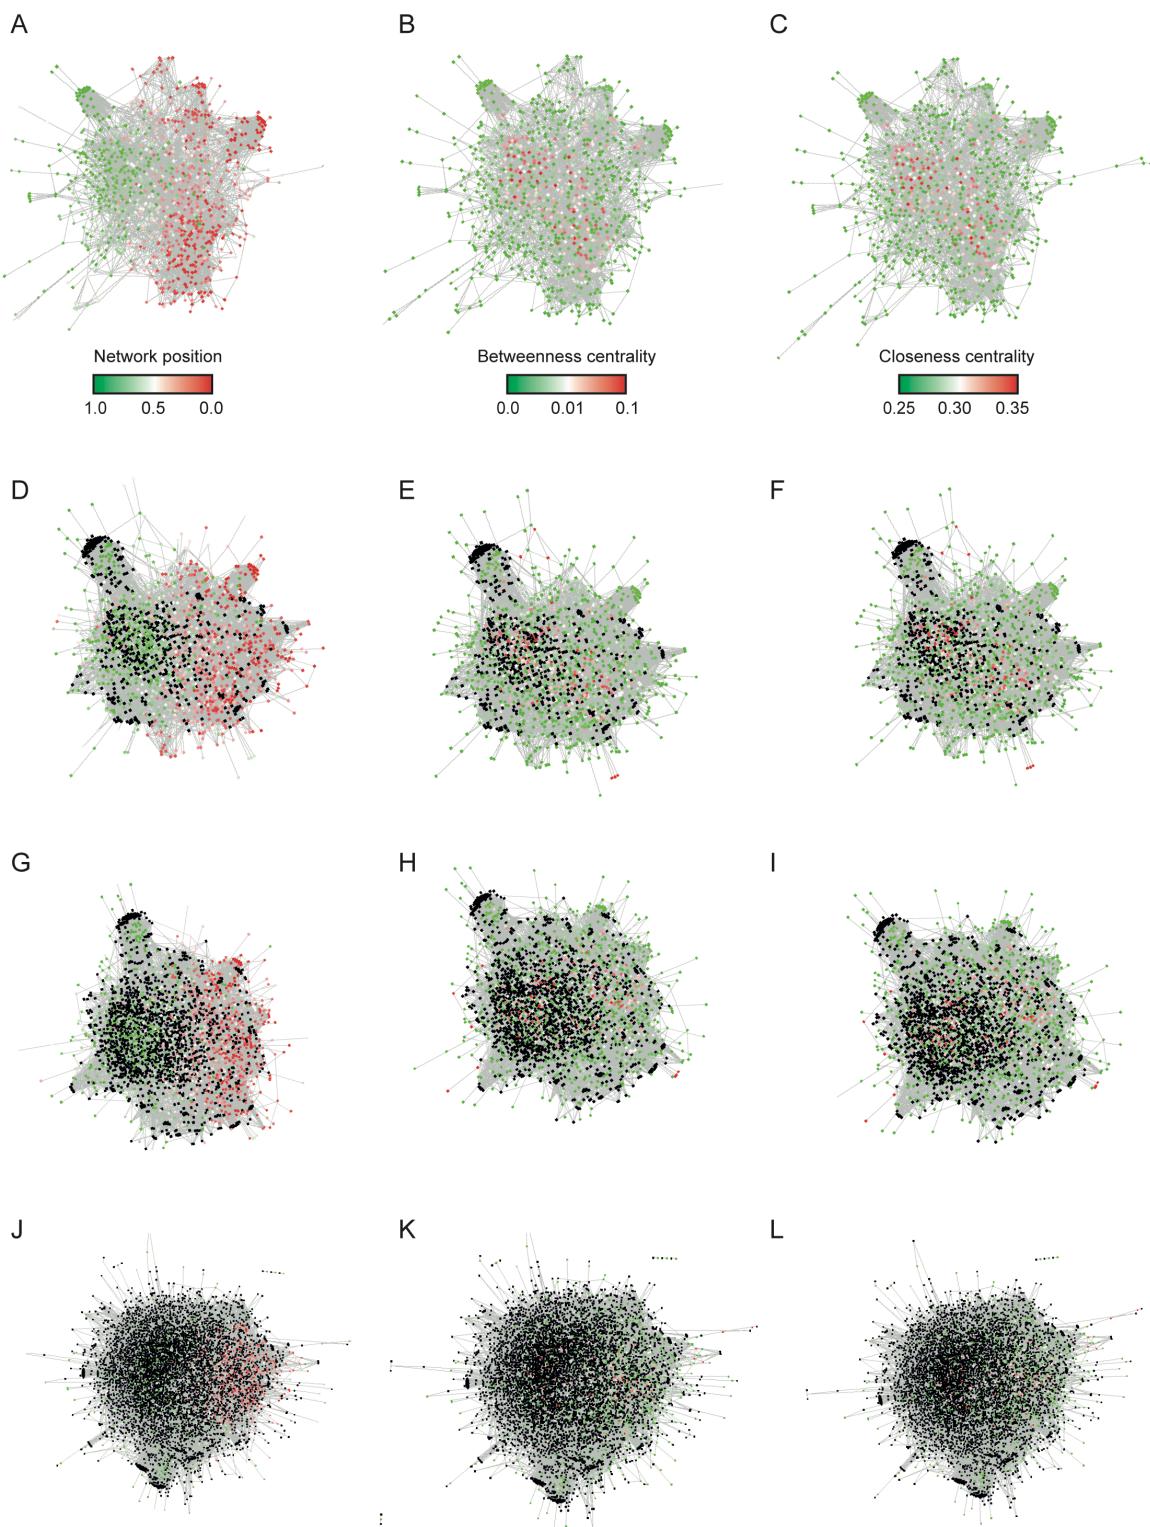

Figure. S3. MPF networks and non-mitochondrial protein partners by different centrality measures. A, B, and C. MPF networks. D, E, and F. MPF network with non-mitochondrial partners (black nodes). Non-mitochondrial proteins that have more than 10 links with mitochondrial proteins were shown. G, H, and I. Non-mitochondrial proteins that have more than 5 links with mitochondrial proteins were shown. J, K, and L. Non-mitochondrial proteins that have more than 1 links with mitochondrial proteins were shown.

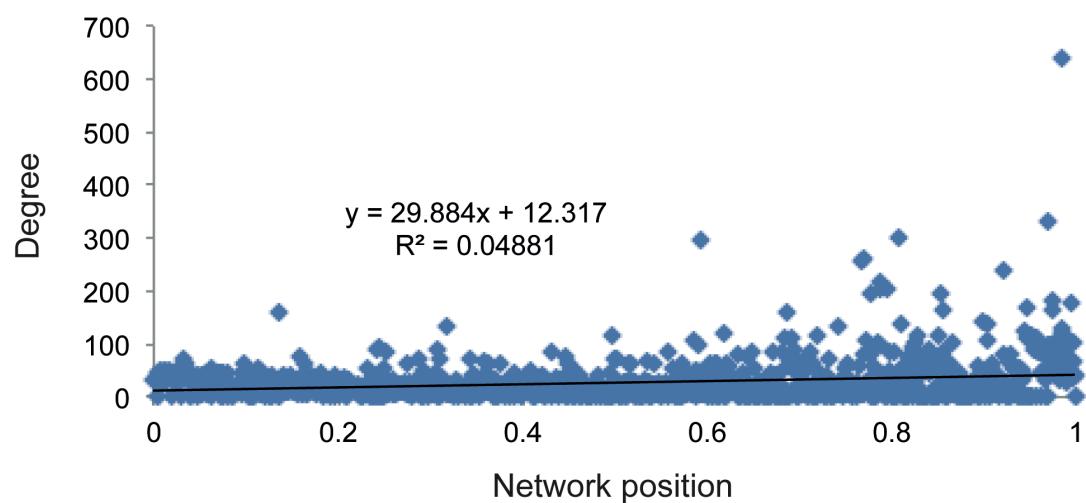

Figure. S4. Degree distribution according to network position. There is no significant correlation between degrees and network positions.

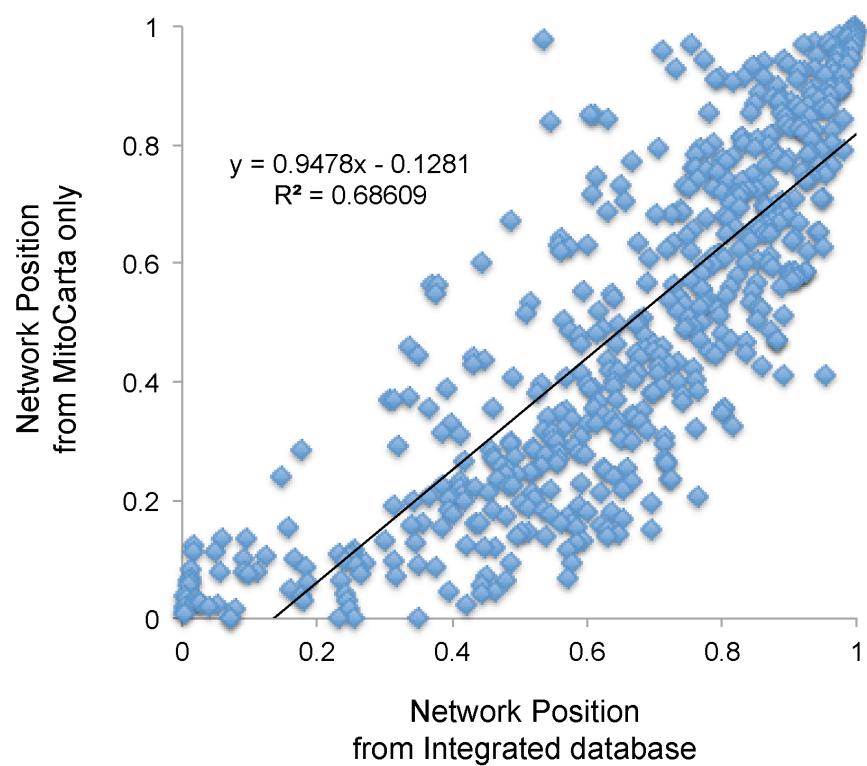

Figure. S5. Comparison of network positions obtained from Integrated database and MitoCarta.

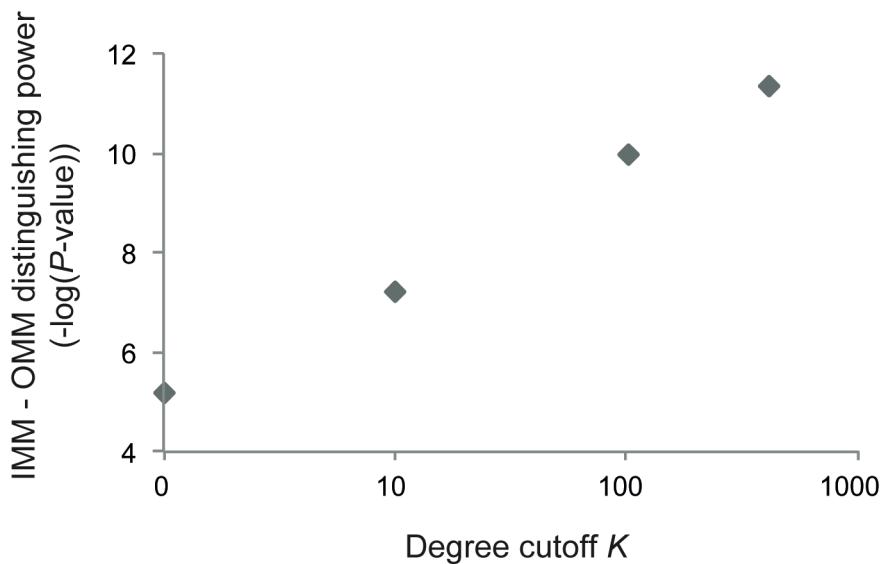

Figure. S6. Performance of distinguishing IMM-OMM proteins according to degree cutoff K . The performance was measured by Mann-Whitney test to separate IMM and OMM proteins.

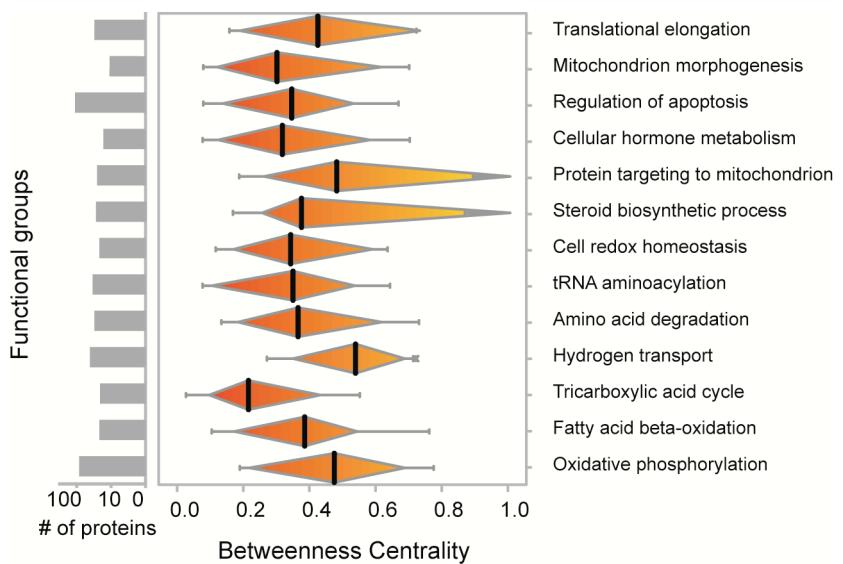

Figure. S7. Distribution of mitochondrial functional groups based on betweenness centrality.

Table S1. Network positions of mitochondrial proteins.
