

SUPPLEMENTARY FIG. S1. Mesenchymal stromal cells (MSCs) do not increase the percentage of Tregs in purified CD4⁺ T-cells stimulated by allogeneic mature dendritic cells (mDCs). CD4⁺ T-cells were isolated from fresh peripheral blood mononuclear cells and stimulated or not in the presence or absence of MSCs ($n=3$). $*p \leq 0.05$, paired t -test. n.s., non significant.
