Yi Qing He, Elissa L. Sutcliffe, Karen L. Bunting, Jasmine Li, Katharine J. Goodall, Ivan K.A. Poon, et al. The endoglycosidase heparanase enters the nucleus of T lymphocytes and modulates H3 methylation at actively transcribed genes via the interplay with key chromatin modifying enzymes. *Transcription* 2012; 3(3); <http://dx.doi.org/10.4161/trns.19998>; <http://www.landesbioscience.com/journals/transcription/article/19998/>

Figure S1

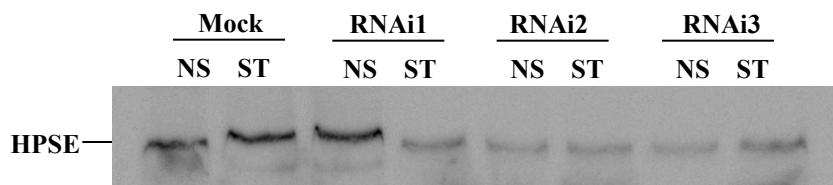

Figure S1. Heparanase Protein Production is Prevented by Heparanase siRNA Transfection

Jurkat T cells were transfected with a single heparanase siRNA (RNAi1, RNAi2, and RNAi3) or a negative control siRNA (Mock) (Ambion) at a concentration of 50 nM using Lipofectamine 2000 reagent (Invitrogen) for 2 days and subsequently left untreated (NS) or stimulated with PI for 2 hr (ST). Whole cell protein extracts were made and Western blotting analysis was used to detect heparanase protein in the cells. Minimal heparanase protein could be detected in resting or activated Jurkat cells that had been transfected with the heparanase siRNAs.

Figure S2

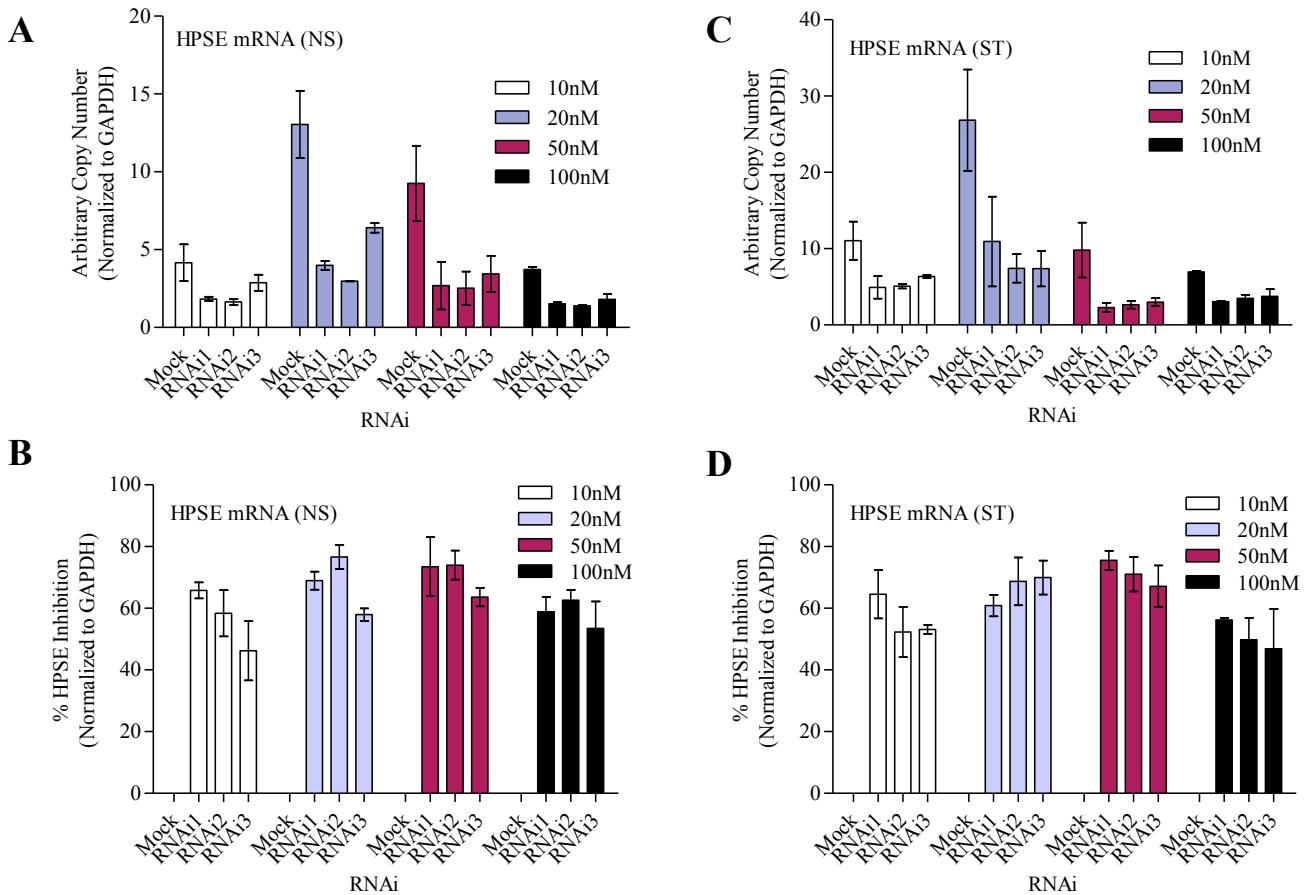

Figure S2. Heparanase mRNA Production is Reduced by Heparanase siRNA transfection

Jurkat T cells were transfected with a single heparanase siRNA (RNAi1, RNAi2 or RNAi3) or a combination of the three siRNAs or mock siRNA at different concentrations (10 nM, 20 nM, 30 nM, 50 nM and 100 nM) using Lipofectamine 2000 reagent for 2 days and subsequently left untreated (NS) or stimulated with PI for 2 hr (ST). Total RNA was extracted and Taqman real Time PCR analysis was used to detect the efficiency of heparanase mRNA knockdown by heparanase siRNA transfection. Heparanase cDNA levels were significantly reduced in both resting (A, B) and activated (C, D) Jurkat cells transfected with any of the three heparanase siRNAs. The inhibition efficiency ranged from 57% to 80% (B and D). No significant difference was seen between the three heparanase siRNAs. The heparanase siRNAs were generally effective at all concentrations tested but a concentration of 50 nM was chosen for all subsequent experiments. Data represent the mean \pm SE of three independent experiments.

Figure S3

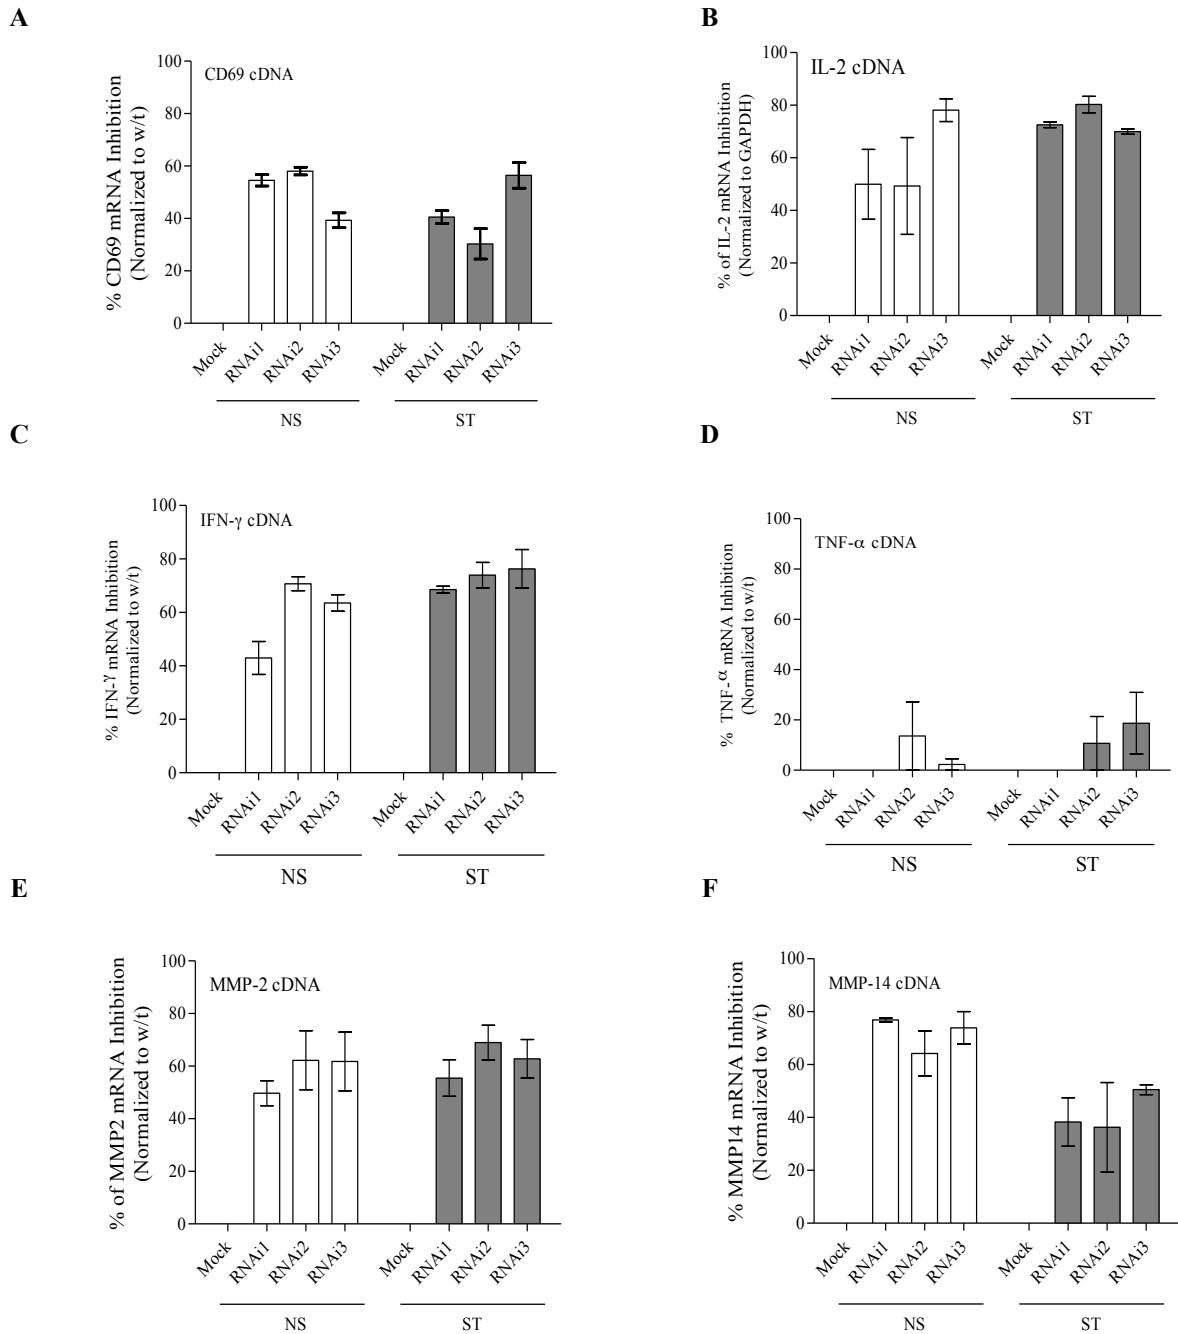

Figure S3 Heparanase is Essential for Inducible Gene Transcription in T cells

Jurkat T cells were transfected with validated heparanase siRNAs (RNAi1, RNAi2 and RNAi3) or a negative control siRNA (Mock) using Lipofectamine 2000 reagent (Invitrogen). At 48 hr post-transfection, Jurkat T cells were either left untreated (NS) or stimulated with PI for 2 hr (ST). Total RNA was extracted and TaqMan real-time PCR performed for CD69 (A), IL-2 (B), IFN- γ (C), TNF- α (D), MMP-2 (E) and MMP-14 (F). The arbitrary copies were normalised to GAPDH and results plotted as percentage inhibition. Data represent the mean \pm SE of three independent experiments.

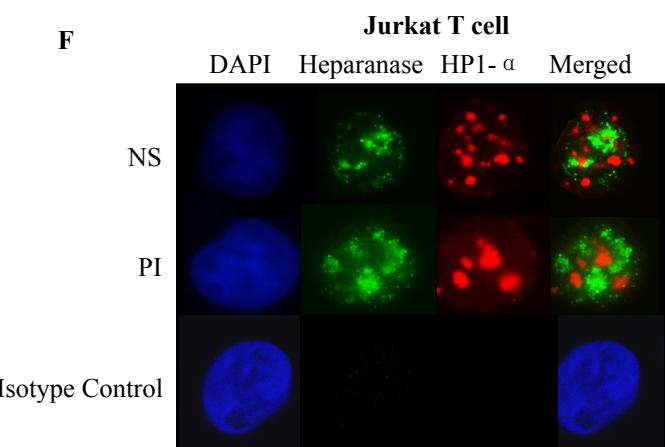

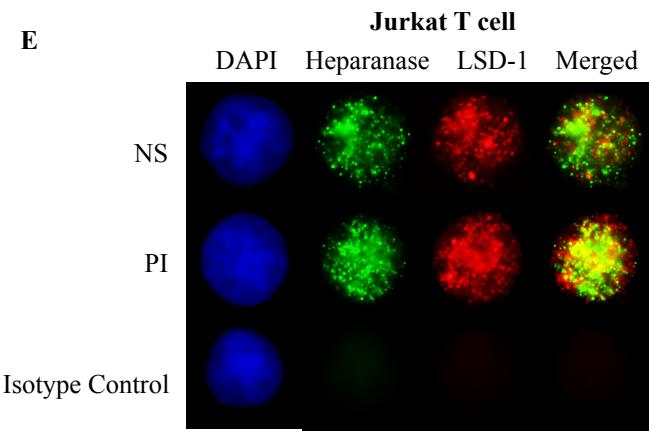

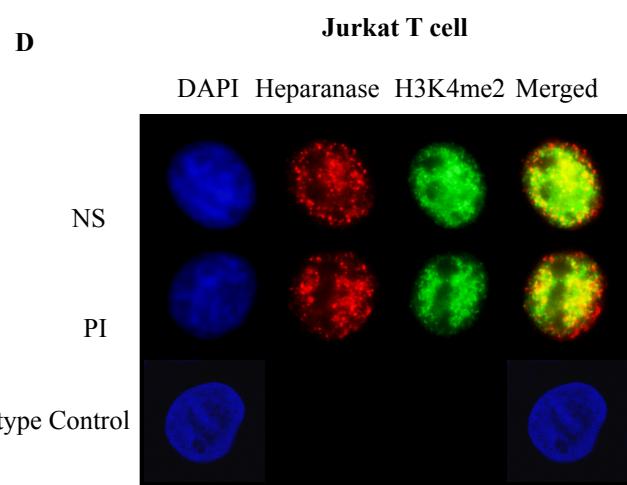

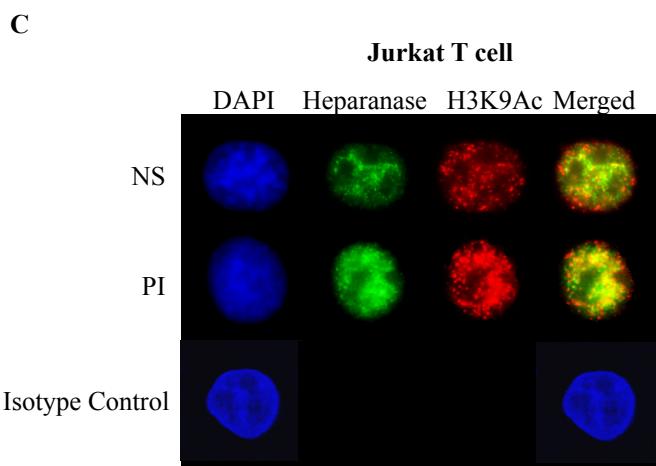

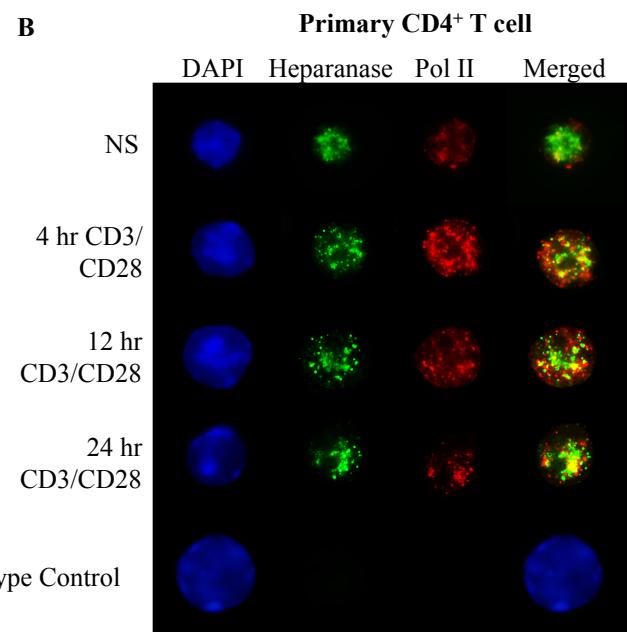

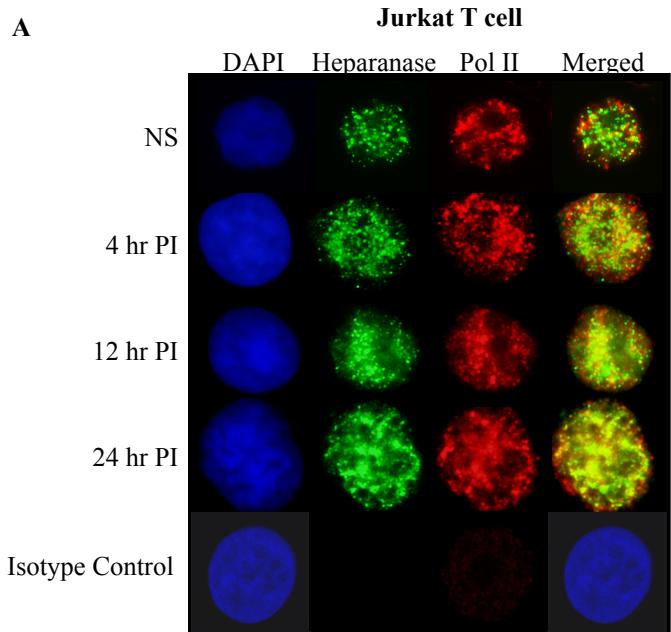

Figure S4

Figure S4. Nuclear Heparanase Associates with Discrete Chromatin Regions

(A) Fluorescence microscopy of fixed nuclei from Jurkat T cells (NS or PI-stimulated for the indicated time points) stained with DAPI and rabbit anti-heparanase or mouse anti-Pol II antibodies. A rabbit isotype of equivalent concentration was used as a control and showed no fluorescence.

(B) Fluorescence microscopy was performed as above using purified mouse primary CD4+ T cells that were NS or stimulated with anti-CD3 and anti-CD28 antibodies for the indicated time points.

(C-F) Fluorescence microscopy was performed as in A, using rabbit polyclonal antibodies against H3K9ac (C) and H3K4me2 (D) and mouse monoclonal antibodies against LSD1 (E) and HP-1 α (F).

Figure S5

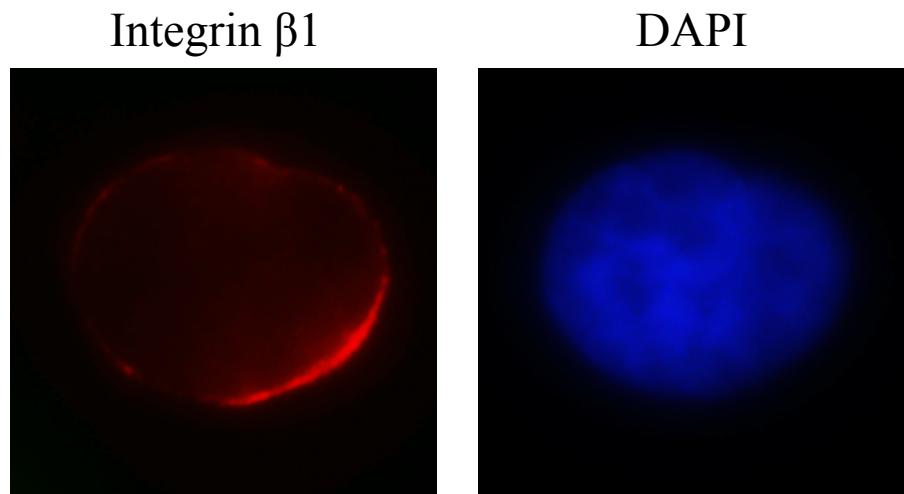

Figure S5. Fluorescence microscopy on fixed whole cells and nuclei
Whole cells and nuclei from Jurkat T cells were stained with the monoclonal mouse anti-human integrin $\beta 1$ (Abcam, ab8238) followed by Cy3-conjugated donkey anti-mouse (Jackson ImmunoResearch, 715-165-151) and DAPI.

Figure S6

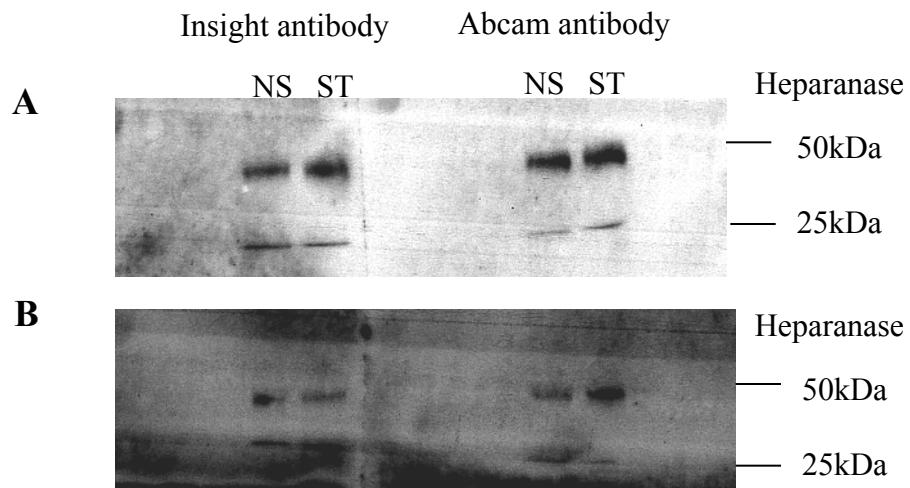

Figure S6. Nuclear Heparanase detected with two different antibodies

(A) Immunoblot analysis of heparanase protein levels in nuclear extracts prepared from non-stimulated (NS) and stimulated (ST) Jurkat T cells. Western blotting analysis was used to detect heparanase protein using a rabbit polyclonal heparanase antibody either from Insight (Insight, Ins-AB-04002) or Abcam (Ab85543).

(B) Repeat experiment is shown.

Figure S7

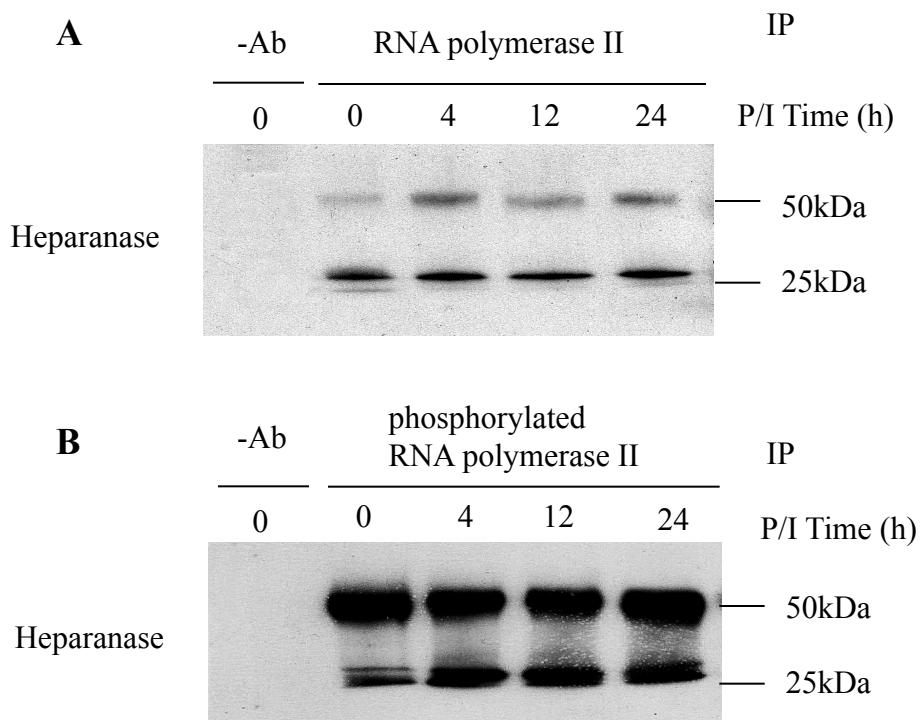

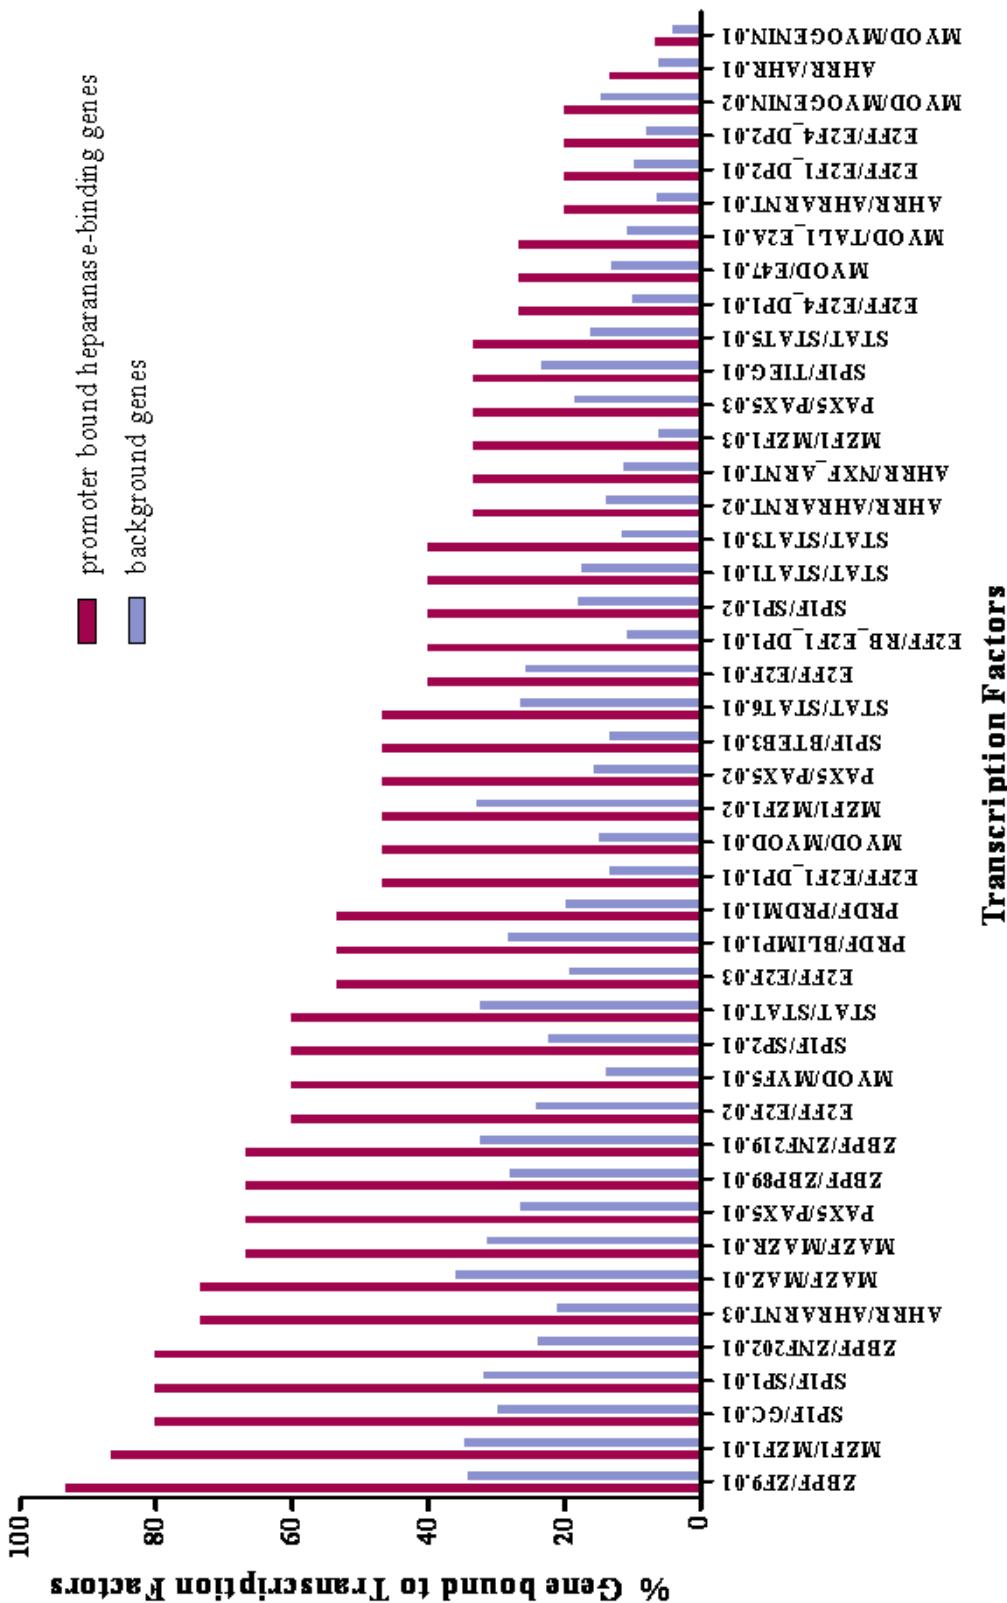

Figure S7. Nuclear Heparanase Associates with RNA polymerase II
Immunoprecipitation of (A) RNA polymerase II or (B) RNA polymerase II phosphorylated from cross-linked sonicated nuclear lysates of either resting (0) or PI-treated T cells for the times indicated followed by immunoblot analysis for heparanase. No antibody (-Ab) was used as a negative control.

Figure S8**Figure S8 Genomatix analysis showing transcription factor binding sites on heparanase target genes**

Bar graph of the most significant transcription factor modules predicted to bind heparanase within promoter regions of heparanase-bound genes identified by ChIP-on-Chip.

Figure S9

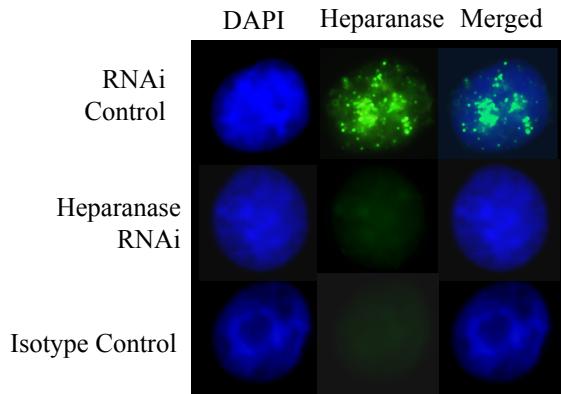

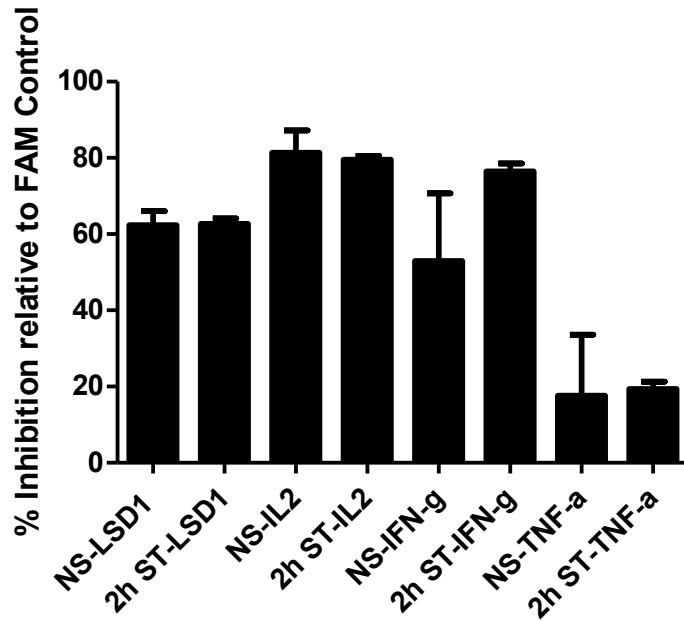

Figure S9. Nuclear localisation of heparanase in Jurkat T cells

(A) Fluorescence microscopy of fixed Jurkat T cells transfected with heparanase siRNA or a negative control siRNA (Ambion) at a concentration of 50 nM using Lipofectamine 2000 reagent (Invitrogen) for 2 days and subsequently stained with DAPI and rabbit polyclonal anti-heparanase. A rabbit isotype of equivalent concentration was used as a control to show no non-specific fluorescence.

Figure S10**Figure S10. LSD1 is Essential for Inducible Gene Transcription in T cells**

Jurkat T cells were transfected with 30 nM LSD1 siRNA (sc-60970) or a negative control siRNA (Mock). At 48 hr post-transfection, Jurkat T cells were either left untreated (NS) or stimulated with PI for 2 hr (ST). Total RNA was extracted and TaqMan real-time PCR performed for *LSD1*, *IL-2*, *IFN- γ* and *TNF- α* . Results are plotted as percentage inhibition relative to corresponding FAM control.

Figure S11

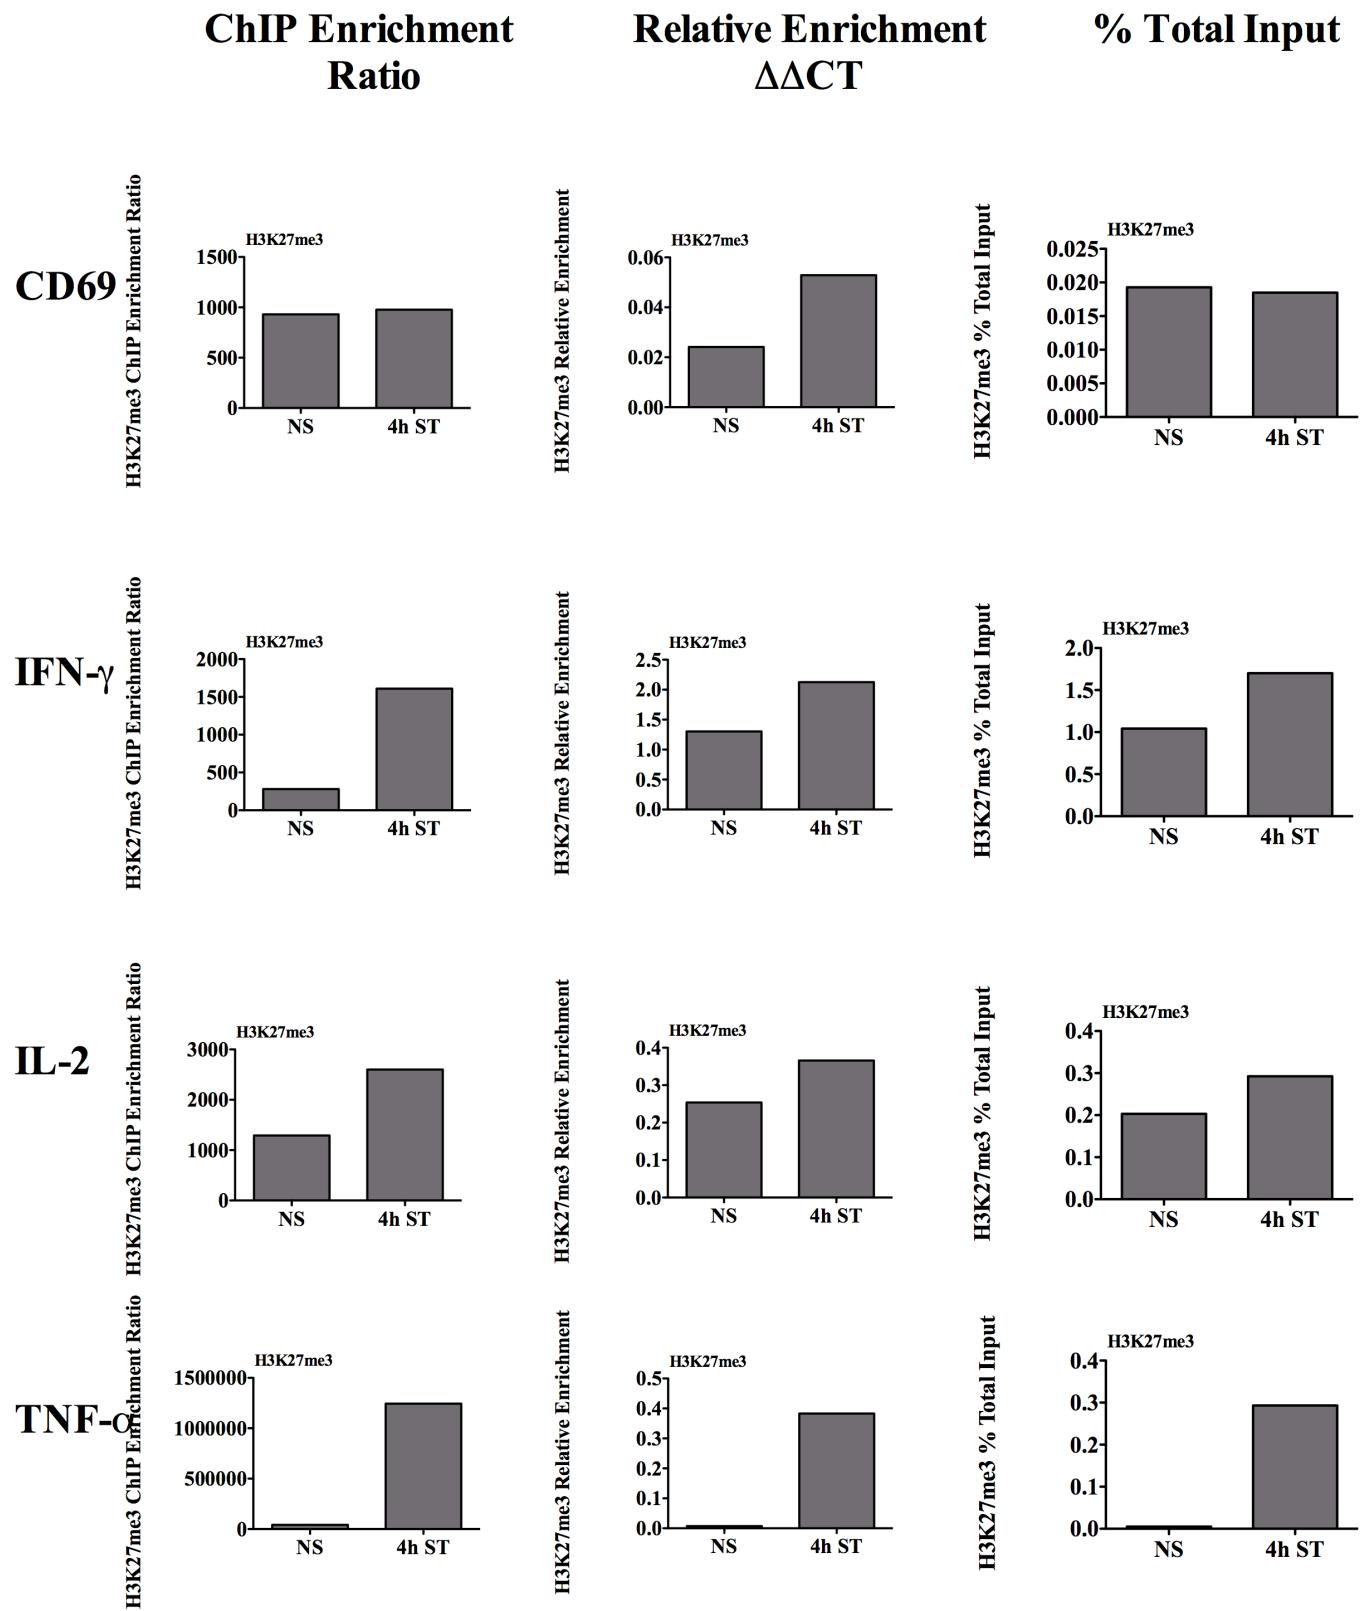

Figure S11. ChIP Analysis Comparison For H3K27me3

ChIP assays were carried out on Jurkat T cells either non-stimulated (NS) or stimulated with PMA/CaI for 4 hours (4h ST). Real-time PCR analysis was performed on immunoprecipitated DNA recovered with the anti-H3K27me3 antibody (Abcam, ab6002) using primers covering the proximal promoter of *CD69*, *IFN-g*, *IL-2* and *TNF-a*. ChIP data were analysed by 3 different methods: 1) For ChIP enrichment ratio, Ct values were converted to arbitrary copies and data graphed as the fold enrichment ratio of immunoprecipitated DNA relative to the no antibody control and normalised against the total input DNA. 2) Relative enrichment was calculated using the $\Delta\Delta Ct$ method. 3) Percentage total input involved subtraction of the no antibody control from the H3K27me3 samples and the data graphed by converting this value into a percentage out of the total genomic input DNA for each respective sample.

Table S1**Table S1 Genes in Resting and Activated Jurkat T cells with Bound Heparanase that also Carry RNA Polymerase II**

Data based on a ChIP-on-chip assay performed on resting (NS) and 12 hr PI activated (ST) Jurkat T cells using heparanase and Pol II specific antibodies.

Enrichment ratio	Binding region	Promoter			5'-transcribed region			3'-transcribed region		
		NS	NS & ST	ST	NS	NS & ST	ST	NS	NS & ST	ST
R>2 (6182)	heparanase	644	1387	469	969	1961	691	18	35	8
