TREND Statement Checklist

Paper Section/ Topic	Item No	Descriptor	Reported?	
			\checkmark	Pg #
Title and Abst	ract			
Title and Abstract	1	 Information on how unit were allocated to interventions 	v	abstrac
		Structured abstract recommended	v	abstrac
		Information on target population or study sample	v	abstra
Introduction				
Background	2	Scientific background and explanation of rationale	v	introdu
		Theories used in designing behavioral interventions		
Mathada				
Methods Participants	3	Eligibility criteria for participants, including criteria at different levels in	v	L
		recruitment/sampling plan (e.g., cities, clinics, subjects)	V	Inclusi criteri
		 Method of recruitment (e.g., referral, self-selection), including the 		Inclusi
		sampling method if a systematic sampling plan was implemented	v	criteri
		Recruitment setting	v	Inclusi
		 Settings and locations where the data were collected 	v	criteri
Interventions	4	Details of the interventions intended for each study condition and how	v	Study d
		and when they were actually administered, specifically including:	v	Study d
		 Content: what was given? 	v	Study de
		 Delivery method: how was the content given? 	v	Study d
		 Unit of delivery: how were the subjects grouped during delivery? 	v	Study
		 Deliverer: who delivered the intervention? 	v	designSt
		 Setting: where was the intervention delivered? 	v	design
		 Exposure quantity and duration: how many sessions or episodes or 	v	a. 1 1
		events were intended to be delivered? How long were they intended to last?		Study d
		 Time span: how long was it intended to take to deliver the intervention to each unit? 	v	Study d
		 Activities to increase compliance or adherence (e.g., incentives) 		
Objectives	5	 Specific objectives and hypotheses 		Introdu
Outcomes	6	 Clearly defined primary and secondary outcome measures 	v v	Analysi
		 Methods used to collect data and any methods used to enhance the quality of measurements 	v	Study d
		 Information on validated instruments such as psychometric and biometric properties 	v	Study d
Sample Size	7	 How sample size was determined and, when applicable, explanation of any interim analyses and stopping rules 		
Assignment Method	8	 Unit of assignment (the unit being assigned to study condition, e.g., individual, group, community) 	v	Study d
Wethou		 Method used to assign units to study conditions, including details of any restriction (e.g., blocking, stratification, minimization) 	na	
		 Inclusion of aspects employed to help minimize potential bias induced due to non-randomization (e.g., matching) 	na	

TREND Statement Checklist

Blinding (masking)	9	 Whether or not participants, those administering the interventions, and those assessing the outcomes were blinded to study condition assignment; if so, statement regarding how the blinding was accomplished and how it was assessed. 	v	Study d
Unit of Analysis	10	 Description of the smallest unit that is being analyzed to assess intervention effects (e.g., individual, group, or community) 	v	Analysi
		 If the unit of analysis differs from the unit of assignment, the analytical method used to account for this (e.g., adjusting the standard error 		
Ctatistical	11	estimates by the design effect or using multilevel analysis)		
Statistical Methods	11	 Statistical methods used to compare study groups for primary methods outcome(s), including complex methods of correlated data 	v	Analys
		 Statistical methods used for additional analyses, such as a subgroup analyses and adjusted analysis 		
		 Methods for imputing missing data, if used 		
		Statistical software or programs used		
Dogulta				1
Results Participant flow	12	Flow of participants through each stage of the study: enrollment,		
•		assignment, allocation, and intervention exposure, follow-up, analysis (a	v	Study de
		diagram is strongly recommended)		Results
		 Enrollment: the numbers of participants screened for eligibility, 		
		found to be eligible or not eligible, declined to be enrolled, and enrolled in the study	v	Results
		 Assignment: the numbers of participants assigned to a study condition 	v	Results
		 Allocation and intervention exposure: the number of participants assigned to each study condition and the number of participants who received each intervention 	v	Results
		 Follow-up: the number of participants who completed the follow- up or did not complete the follow-up (i.e., lost to follow-up), by study condition 	v	Results
		 Analysis: the number of participants included in or excluded from the main analysis, by study condition 	v	Results
		 Description of protocol deviations from study as planned, along with reasons 		
Recruitment	13	Dates defining the periods of recruitment and follow-up		
Baseline Data	14	 Baseline demographic and clinical characteristics of participants in each study condition 	v	Results table 1
		Baseline characteristics for each study condition relevant to specific		
		disease prevention research		
		Baseline comparisons of those lost to follow-up and those retained, overall	+	
		 and by study condition Comparison between study population at baseline and target population 		
		of interest		
Baseline	15	• Data on study group equivalence at baseline and statistical methods used	1	

TREND Statement Checklist

Numbers	16	• Number of participants (denominator) included in each analysis for each		
analyzed	-•	study condition, particularly when the denominators change for different	v	Results
Outcomes and		outcomes; statement of the results in absolute numbers when feasible		
		 Indication of whether the analysis strategy was "intention to treat" or, if 	†	
		not, description of how non-compliers were treated in the analyses		
	17	 For each primary and secondary outcome, a summary of results for each 		
estimation		estimation study condition, and the estimated effect size and a confidence	v	Results
		interval to indicate the precision		
		 Inclusion of null and negative findings 	v	Results
		 Inclusion of results from testing pre-specified causal pathways through 		
		which the intervention was intended to operate, if any		
Ancillary	18	• Summary of other analyses performed, including subgroup or restricted		Results
analyses		analyses, indicating which are pre-specified or exploratory	v	Results
Adverse events	19	Summary of all important adverse events or unintended effects in each		Results
		study condition (including summary measures, effect size estimates, and	v	icoure
		study condition (including summary measures, effect size estimates, and		
		confidence intervals)		
DISCUSSION		confidence intervals)		
DISCUSSION Interpretation	20	 confidence intervals) Interpretation of the results, taking into account study hypotheses, 	v	Discuss
	20	 confidence intervals) Interpretation of the results, taking into account study hypotheses, sources of potential bias, imprecision of measures, multiplicative analyses, 	v	Discuss
	20	 confidence intervals) Interpretation of the results, taking into account study hypotheses, sources of potential bias, imprecision of measures, multiplicative analyses, and other limitations or weaknesses of the study 	v	Discuss
	20	 confidence intervals) Interpretation of the results, taking into account study hypotheses, sources of potential bias, imprecision of measures, multiplicative analyses, and other limitations or weaknesses of the study Discussion of results taking into account the mechanism by which the 	v	
	20	 Interpretation of the results, taking into account study hypotheses, sources of potential bias, imprecision of measures, multiplicative analyses, and other limitations or weaknesses of the study Discussion of results taking into account the mechanism by which the intervention was intended to work (causal pathways) or alternative 		Discuss
	20	 confidence intervals) Interpretation of the results, taking into account study hypotheses, sources of potential bias, imprecision of measures, multiplicative analyses, and other limitations or weaknesses of the study Discussion of results taking into account the mechanism by which the intervention was intended to work (causal pathways) or alternative mechanisms or explanations 		
	20	 confidence intervals) Interpretation of the results, taking into account study hypotheses, sources of potential bias, imprecision of measures, multiplicative analyses, and other limitations or weaknesses of the study Discussion of results taking into account the mechanism by which the intervention was intended to work (causal pathways) or alternative mechanisms or explanations Discussion of the success of and barriers to implementing the intervention, 		
	20	 confidence intervals) Interpretation of the results, taking into account study hypotheses, sources of potential bias, imprecision of measures, multiplicative analyses, and other limitations or weaknesses of the study Discussion of results taking into account the mechanism by which the intervention was intended to work (causal pathways) or alternative mechanisms or explanations Discussion of the success of and barriers to implementing the intervention, fidelity of implementation 	v	Discuss
Interpretation		 confidence intervals) Interpretation of the results, taking into account study hypotheses, sources of potential bias, imprecision of measures, multiplicative analyses, and other limitations or weaknesses of the study Discussion of results taking into account the mechanism by which the intervention was intended to work (causal pathways) or alternative mechanisms or explanations Discussion of the success of and barriers to implementing the intervention, fidelity of implementation Discussion of research, programmatic, or policy implications 	v	Discuss
	20	 confidence intervals) Interpretation of the results, taking into account study hypotheses, sources of potential bias, imprecision of measures, multiplicative analyses, and other limitations or weaknesses of the study Discussion of results taking into account the mechanism by which the intervention was intended to work (causal pathways) or alternative mechanisms or explanations Discussion of the success of and barriers to implementing the intervention, fidelity of implementation Discussion of research, programmatic, or policy implications Generalizability (external validity) of the trial findings, taking into account 	v	Discuss
Interpretation		 confidence intervals) Interpretation of the results, taking into account study hypotheses, sources of potential bias, imprecision of measures, multiplicative analyses, and other limitations or weaknesses of the study Discussion of results taking into account the mechanism by which the intervention was intended to work (causal pathways) or alternative mechanisms or explanations Discussion of the success of and barriers to implementing the intervention, fidelity of implementation Discussion of research, programmatic, or policy implications Generalizability (external validity) of the trial findings, taking into account the study population, the characteristics of the intervention, length of 	v	Discuss
Interpretation		 confidence intervals) Interpretation of the results, taking into account study hypotheses, sources of potential bias, imprecision of measures, multiplicative analyses, and other limitations or weaknesses of the study Discussion of results taking into account the mechanism by which the intervention was intended to work (causal pathways) or alternative mechanisms or explanations Discussion of the success of and barriers to implementing the intervention, fidelity of implementation Discussion of research, programmatic, or policy implications Generalizability (external validity) of the trial findings, taking into account the study population, the characteristics of the intervention, length of follow-up, incentives, compliance rates, specific sites/settings involved in 	v	Discuss
Interpretation	21	 confidence intervals) Interpretation of the results, taking into account study hypotheses, sources of potential bias, imprecision of measures, multiplicative analyses, and other limitations or weaknesses of the study Discussion of results taking into account the mechanism by which the intervention was intended to work (causal pathways) or alternative mechanisms or explanations Discussion of the success of and barriers to implementing the intervention, fidelity of implementation Discussion of research, programmatic, or policy implications Generalizability (external validity) of the trial findings, taking into account the study population, the characteristics of the intervention, length of follow-up, incentives, compliance rates, specific sites/settings involved in the study, and other contextual issues 	v	Discuss
Interpretation		 confidence intervals) Interpretation of the results, taking into account study hypotheses, sources of potential bias, imprecision of measures, multiplicative analyses, and other limitations or weaknesses of the study Discussion of results taking into account the mechanism by which the intervention was intended to work (causal pathways) or alternative mechanisms or explanations Discussion of the success of and barriers to implementing the intervention, fidelity of implementation Discussion of research, programmatic, or policy implications Generalizability (external validity) of the trial findings, taking into account the study population, the characteristics of the intervention, length of follow-up, incentives, compliance rates, specific sites/settings involved in 	v	Discuss
