

SUPPLEMENTAL FIGURE 1

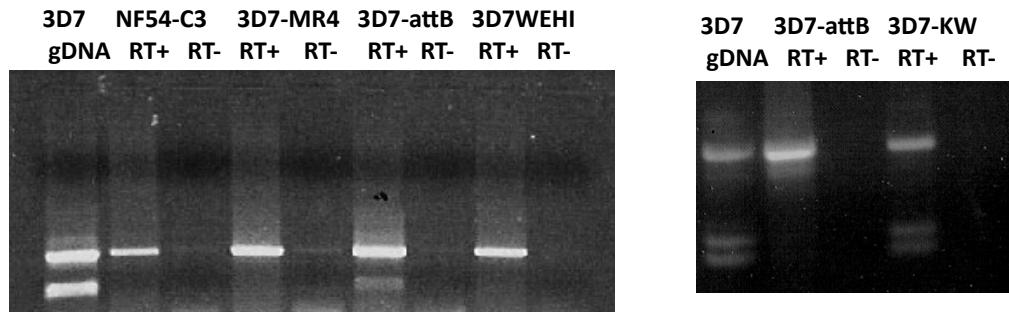

Supplemental figure 1: Schematic of *clag 3* PCR-RFLP assay.

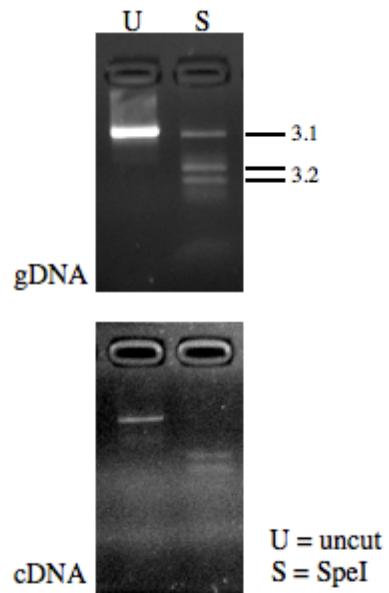

A. Diagram of the chromosome 3 region containing both *clag 3* paralogs with the 3' region amplified from each *clag 3* gene with conserved primers marked with thin black arrows.

B. Sequence alignment of the resulting amplicon of *clag 3.1* and *clag 3.2*, with primer binding regions and sites of restriction enzymes used in assay denoted. A Spel site that is present in both sequences is marked by a black line both above and below the sequence, whereas the unique Spel site found only in *clag 3.2* is denoted by a single black line.

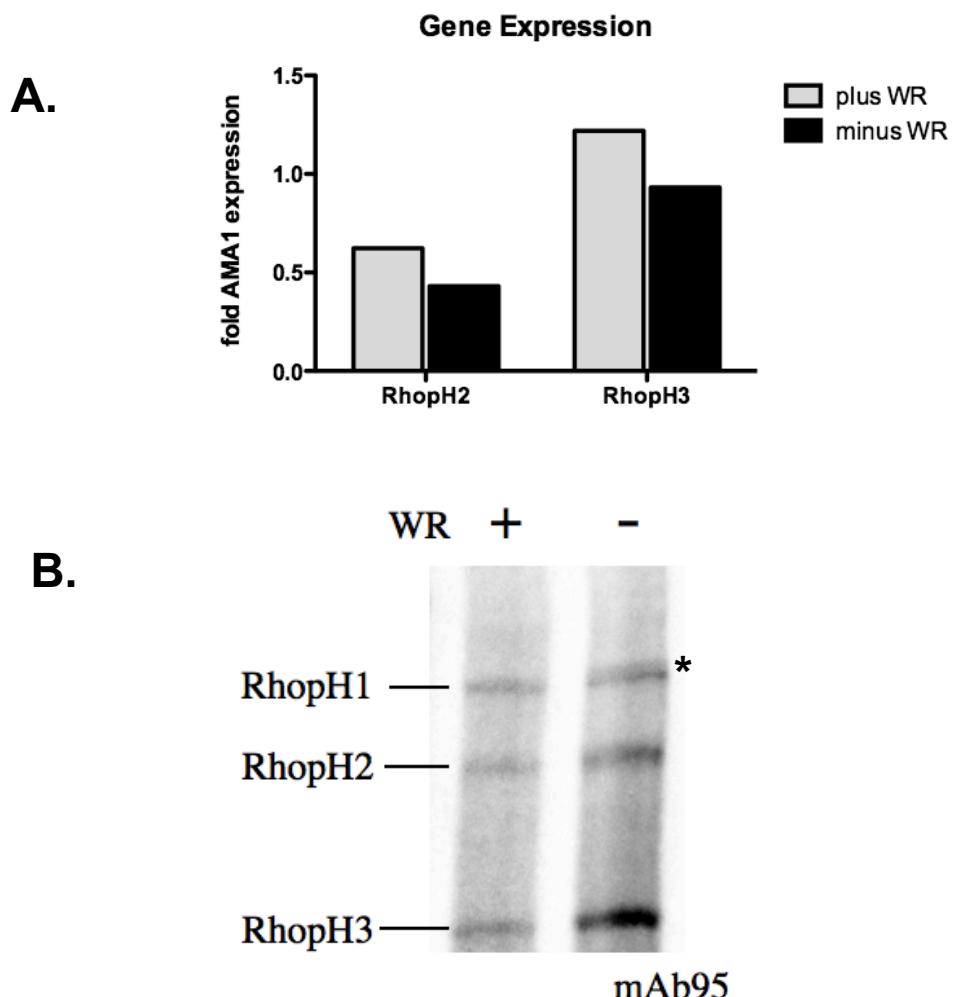

SUPPLEMENTAL FIGURE 2

Supplemental figure 2: Screen of 4 3D7 isogenic lines (3D7 sources and NF54) for clag 3.2 expression. Only 3D7-attB appears to express a low level of 3.2. Further experimentation with 3D7attB after additional time in culture (6 weeks between these gels) revealed only minimal 3.2 expression; B. An additional source of 3D7 (3D7-KW) expressed clag 3.1 and clag 3.2 in an approximately 1:1 ratio, making recovering clag 3.2 expressing clones more feasible.

Supplementary Figure 3. RFLP analysis of Clag3.1 and Clag3.2 from the parasite strain T9/94. Top panel. RFLP (digestion with SpeI) of Clag 3 amplified from genomic DNA. Restriction digestion reveals one copy of Clag 3.1 and one copy of Clag 3.2 Lower panel. RFLP (digestion with SpeI) of Clag 3 amplified from schizont cDNA of T9/94. Only clag 3.2 is expressed.

Supplementary Figure 4.

A. RhopH2 and RhopH3 expression is unchanged in Clag3.2ins cl5 WR + and WR- lines

B. Immunoprecipitation of RhopH complex members with antibodies specific to RhopH2 (mAb95). This was carried out by the method described in Baldi et al. Infection & Immunity, 70, 5236-45, 2002.

*:Clag 3.1 band that is only present in WR- and not in WR+. Quantity of members of RhopH1 complex does not change in Clag3.2 cl5 WR + and WR- lines. Clag3.1 is lost in the Clag3.2 cl5 WR +, IPed with mAb95 (described in Doury et al. Parasitology, 108, 269-280,1994, a kind gift from Dr. Dubremetz INSERM, France).

SUPPLEMENTAL TABLE 1: qRT-PCR primers for measuring RhopH expression levels

Primer name	Gene	Sequence (5'→3')
clag2ccF/R	PFB0935w	gaagtgttctaaatgacag catcggtattatctgattgag
clag3.1ccF/R	PFC0120w (5'UTR)	tggacaaaatatgatttgtac gtacagaattgaatagtac
clag3.2ccF/R	PFC0110w (5'UTR)	ggtcatcatcggtattgtac ccgtattcaaaaaggaggtacac
clag8ccF/R	MAL7P1.229	ctgtcgacatatgttag gccttactatttgacg
clag9ccF/R	PFI1730w	ggctatgtcaagagct ggagtaatgtcagtacc
RhopH2ccF/R	PFI1445w	cacatatcttacagaacc ttggatcctcagatac
RhopH3ccF/R		
AMA1F/R	PF11_0344	tccccatcccatcgaagttgaa tgatgcaattataatttcat

Supplemental table: qPCR primers for *c^lag 3* ChIP assays

Primer name	Relative position to region's genes	Sequence (5'→3')
c3chip1F/R	Far upstream <i>c^lag3.2</i>	acgatgatgattacgaggag gatcagccatcatgttcttgtc
c3chip2F/R	Far upstream <i>c^lag3.2</i>	atagagatgaccagaatg ctgttatatatttactttag
c3chip3F/R	Close upstream <i>c^lag3.2</i>	ggtcatcatcggtattgtac ccgtattcaaaaaggagtgacac
c3chip4F/R	Within 3' coding region of <i>c^lag 3.2</i>	atccccaaagatgtactcctg gttctgaactaggaggccaa
c3chip5F/R	Within 3' coding region of <i>varC</i> pseudogene	cgattagtactaatcgattatgc gttgagatcctcaatcg
c3chip6F/R	Middle coding region of <i>varC</i> pseudogene	cgtgccattccatcaacca cgaacttacaaaaacatcacc
c3chip7F/R	Upstream <i>varC</i> /far upstream <i>c^lag 3.1</i>	ctataataaatccattattgc aatggttattaactattatgc
c3chip8F/R	Upstream <i>varC</i> /far upstream <i>c^lag 3.1</i>	tctgcaggtttatattatcc tcattcagatggagaaaatg
c3chip9F/R	Upstream <i>varC</i> /far upstream <i>c^lag 3.1</i>	gagacagctgtatcaccca cacaacattttaggtgtcatg
c3chip10F/R	Upstream <i>c^lag 3.1</i> / far upstream <i>varC</i>	agaatcccttgcaatac gcacttaattctgttgcac
