

**Appendix 2 (as supplied by the authors): Price increase per pack of cigarettes from baseline as a predictor of cessation outcomes at 6 months and 1 year**

Outcome	Risk associated with a \$1 increase per 20 cigarettes, RR (95% CI)*	
	Unadjusted	Adjusted†
<b>Attempt to quit</b>		
6 mo	1.08 (1.02–1.14)	1.06 (0.98–1.15)
1 yr	1.09 (1.04–1.15)	1.04 (0.98–1.11)
<b>30-day cessation</b>		
6 mo	1.08 (0.99–1.17)	1.06 (0.98–1.15)
1 yr	1.10 (0.99–1.22)	1.07 (0.98–1.15)
<b>Long-term cessation</b>		
1 yr	1.11 (0.97–1.27)	1.12 (1.01–1.25)
Note: CI = confidence interval, RR = relative risk. *Sample size for unadjusted analyses was 881; sample size for adjusted analyses was 721. †Adjusted for all covariates listed in Table 1.
