

Supplemental Table 1. Association of UGT haplotypes with microsomal acetaminophen glucuronidation activity measured at 3 different substrate concentrations in human liver bank samples. Haplotypes evaluated included the UGT1A-3'UTR haplotype with SNPs c.1813C>T, c.1941C>G, and c.2042C>G; and the UGT1A6/UGT1A1 haplotype with variants UGT1A6 c.19T>G, c.541A>G, c.552A>C, and UGT1A1 -53TA6>TA7.
