

Figure S3 Interstripe 1-2 expression is elevated in w^{1118} males. Boxplots show normalized Eve expression in the 1-2 (A) and 2-3 (B) interstripes. See legend of Fig. 1 for an explanation of boxplot. Note that *greater* expression in an interstripe implies less repression, that is, *lower* values of relative repression. Sample size is the same as Fig. 1E.
