

Supplementary Figure 1.

Distributions of optical density values of individual CTL-K9.3 clone against HapMap B-LCLs assayed by ELISA.

HapMap CEU B-LCLs were transduced with HLA-B*07:02 cDNA and assayed for their minor H antigen status by interferon- γ ELISA at a predetermined Responder: Stimulator ratio. Assays were performed at least in duplicate. Dotted lines indicate threshold for antigen-negative and positive subjects.
