Abbreviations:

a: MRglc = glucose metabolic rate measured with Simplified kinetic method (SKM); b: S2 = 10-12 days after radiotherapy or chemoradiotherapy; c: SUVmax = maximum standard uptake value and it is given as reference; d: 1 = tumor controlled at 12 months; e: 0 = tumor recurred within 12 months; f: Model prediction is based on residual MRglc measured with SKM.
