

## Supplemental Data

### FOXP2 Targets Show Evidence of Positive Selection in European Populations

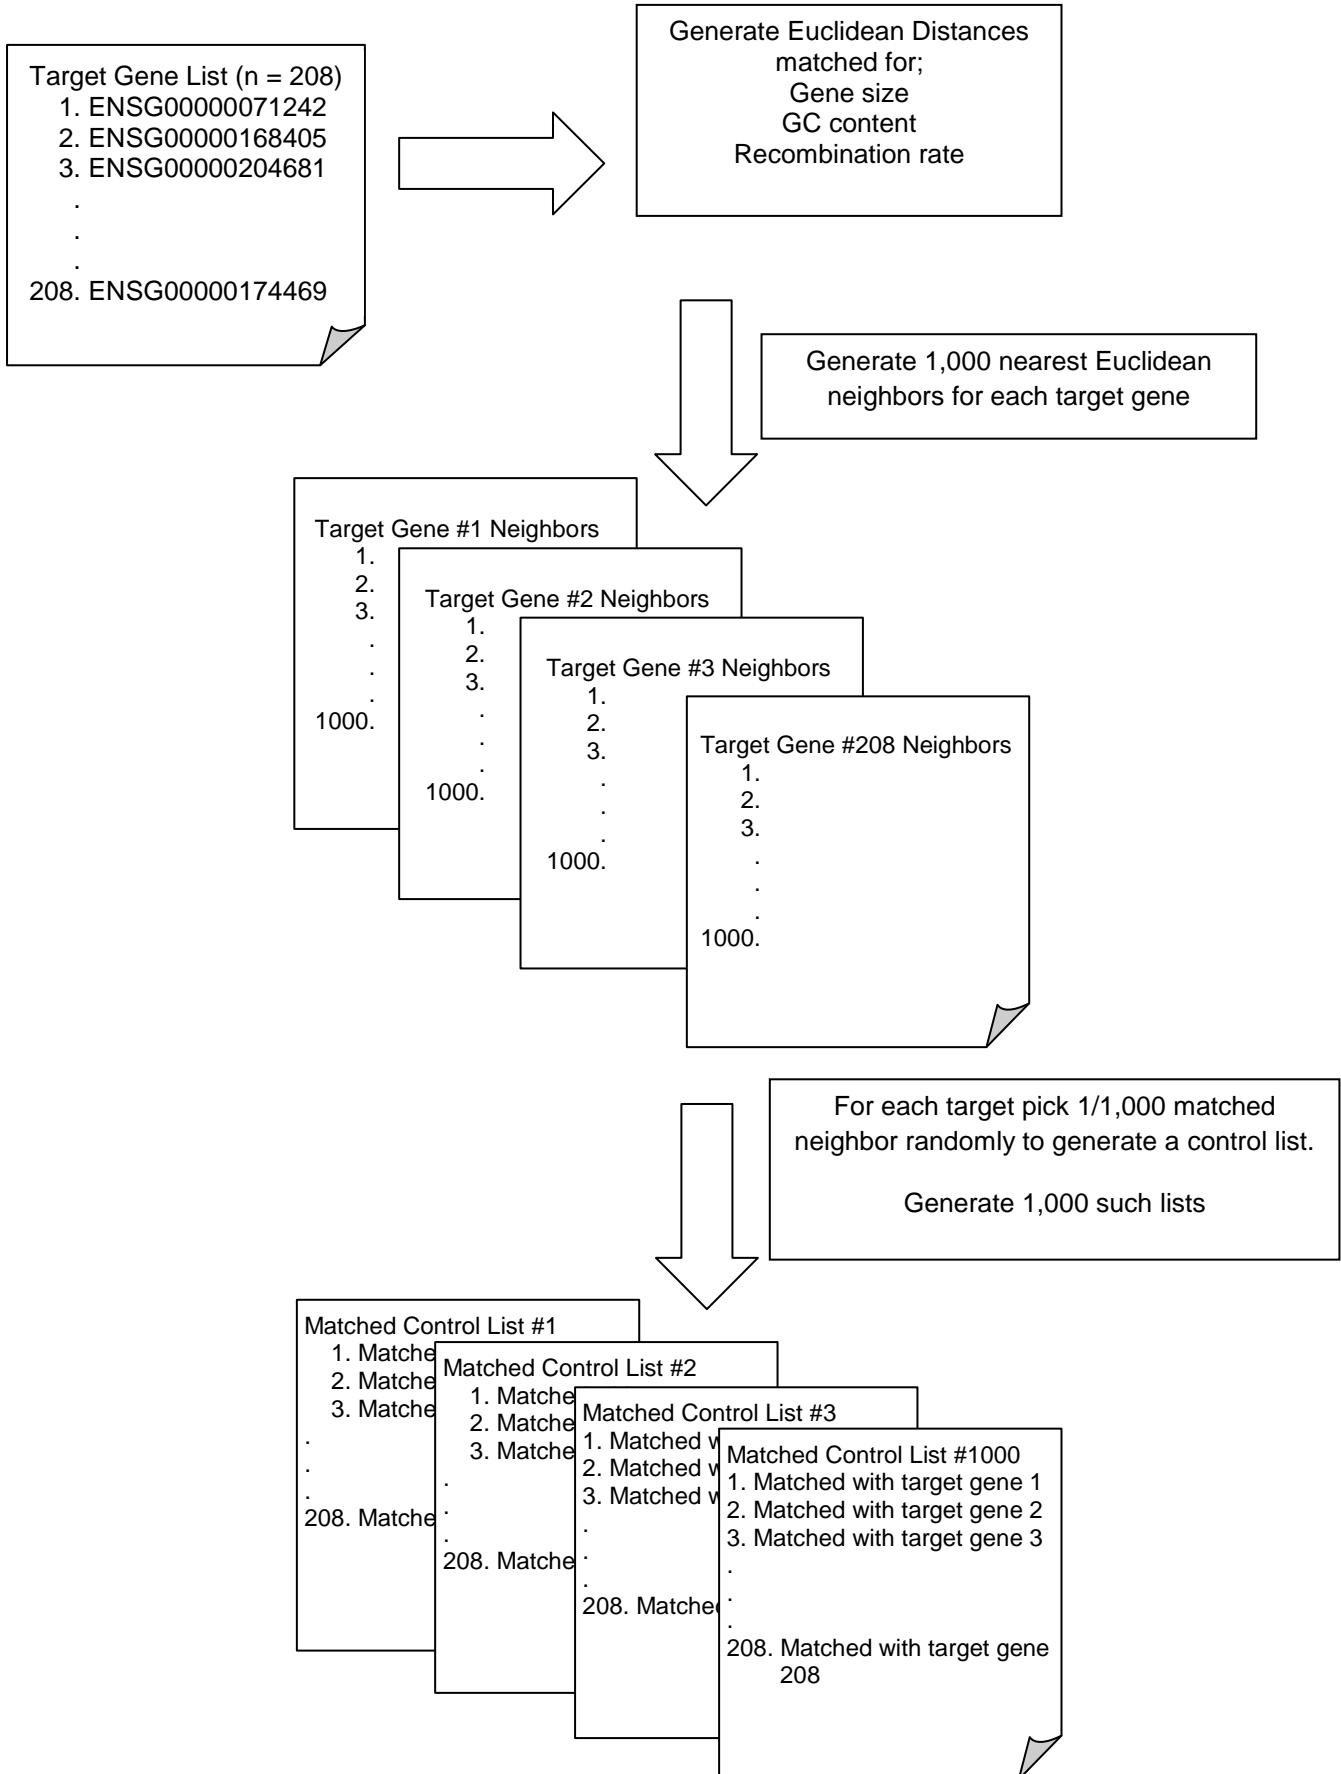

Qasim Ayub, Bryndis Yngvadottir, Yuan Chen, Yali Xue, Min Hu, Sonja C. Vernes, Simon E. Fisher, and Chris Tyler-Smith

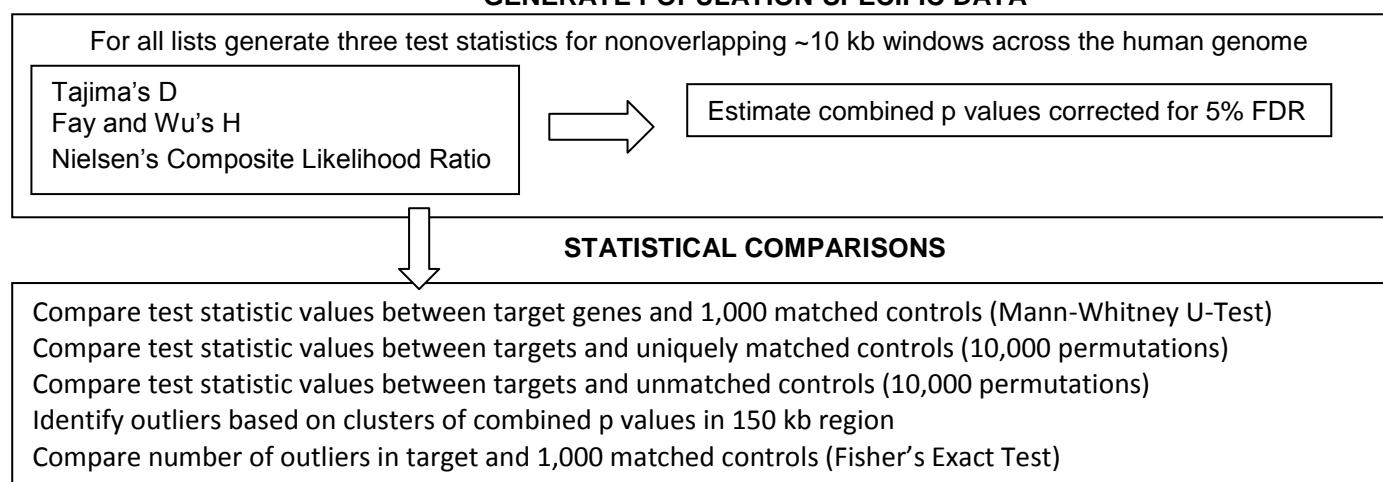

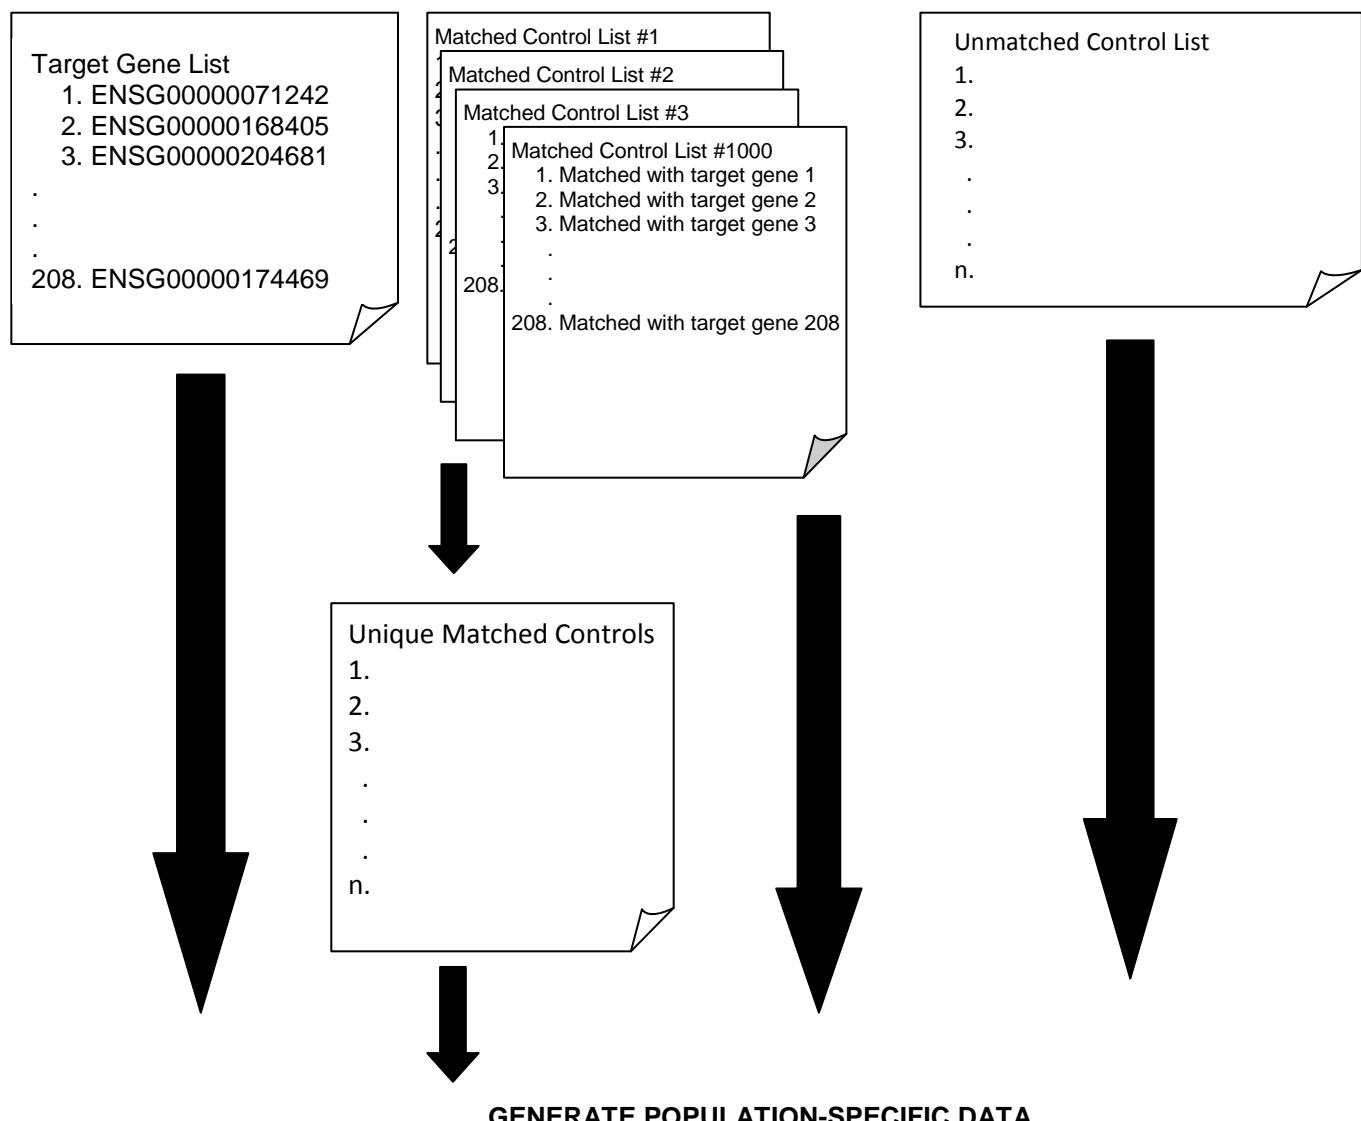

**Figure S1. Overlap of FOXP2 Targets**

FOXP2 targets were identified in three separate chromatin immunoprecipitation genomic screens.

**A**

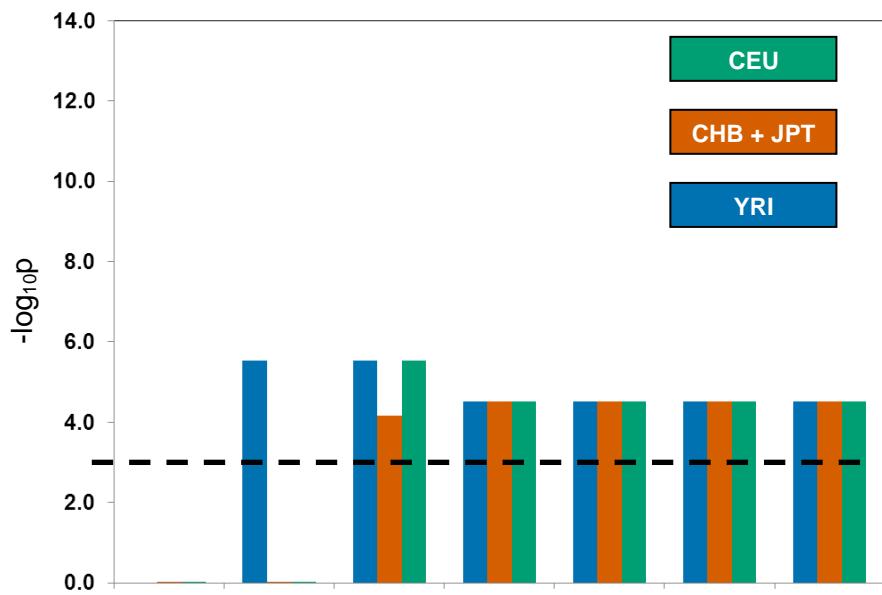

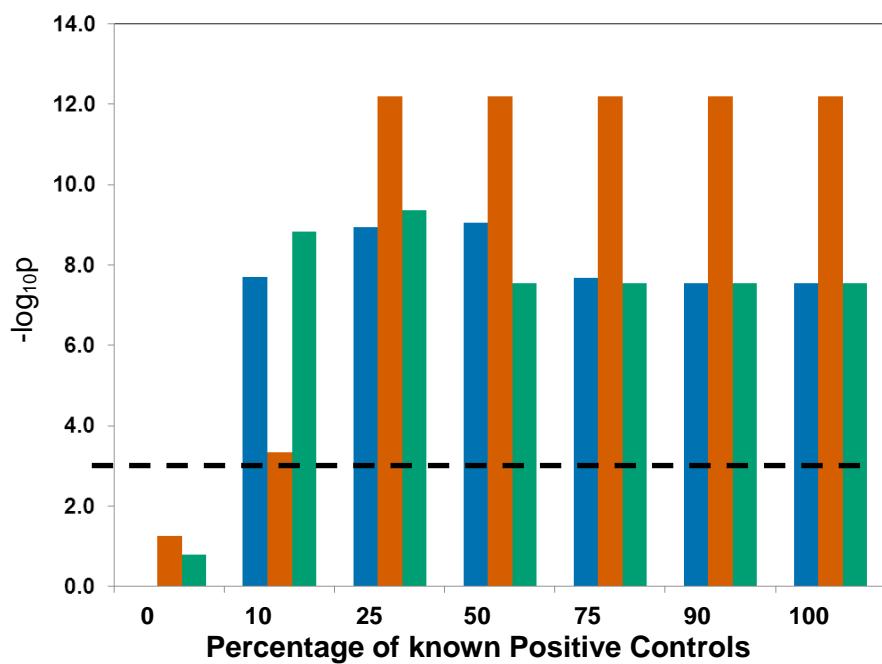

**B**

**Figure 2. Schema of the Analyses Pipeline**

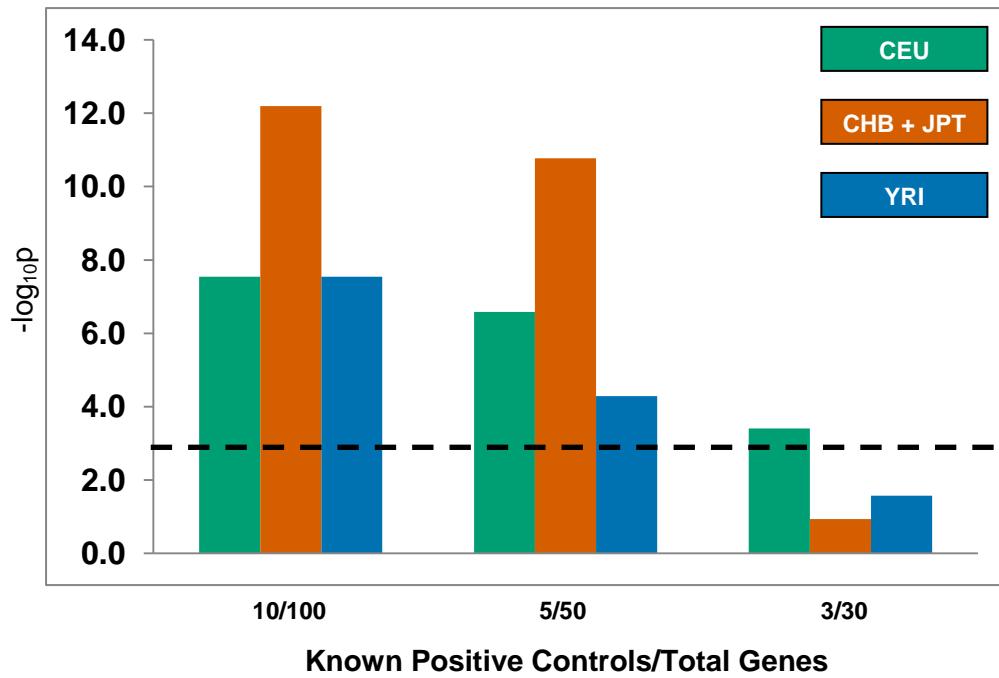

(A) Generation of control lists for putative target list of 208 genes.

(B) Data generation and statistical analyses.

**A****B**

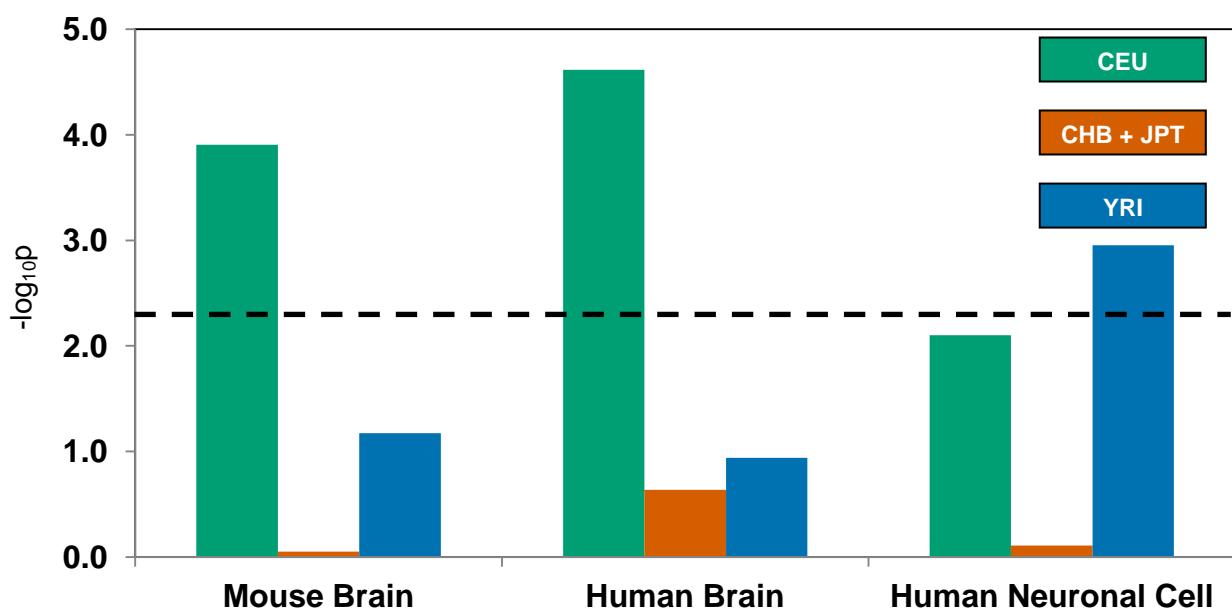

**Figure S3. Sensitivity of the Pipeline**

Sensitivity was tested by varying proportion of known positively selected genes identified by frequency spectrum based tests in 1000 Genomes Project (A) Mann Whitney U and (B) Permutation test comparisons. The dashed horizontal line depicts the threshold of the  $-\log_{10} p$  value for multiple comparisons.

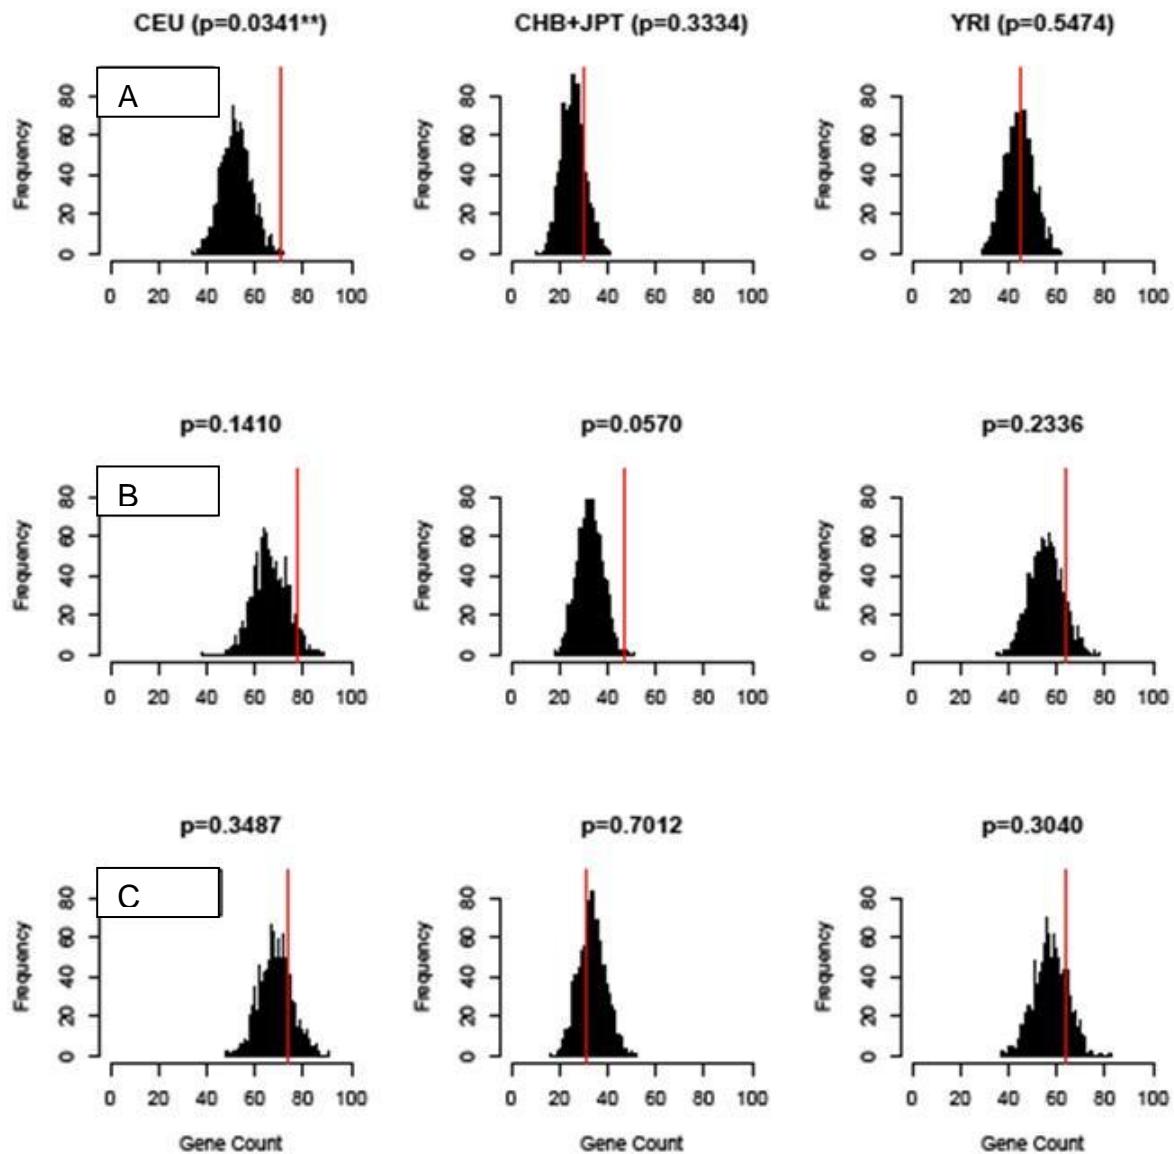

**Figure S4. Detection of Signals in Lists Containing 100, 50, and 30 Genes**

The method was able to detect a signal when at least 10% of the genes in a list under investigation are under selection. Gene lists containing 100, 50, and 30 genes with 10, 5, and 3 known positives were analysed. A selection signal was detected in all populations for the 100 and 50 gene sets but only in CEU for the 30 gene set. Permutation test comparisons are shown and the dashed horizontal line represents the  $-\log_{10} p$  value for multiple comparisons.

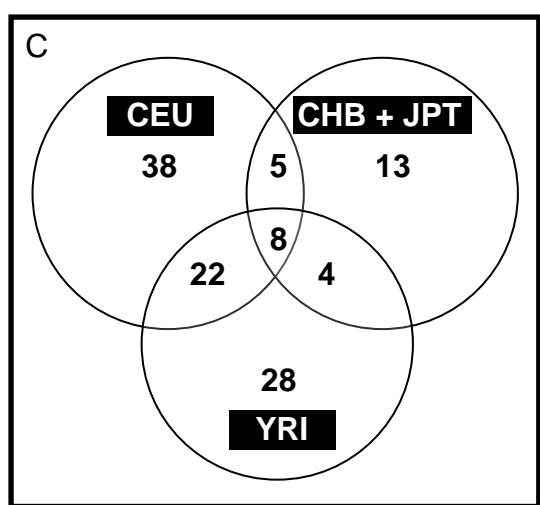

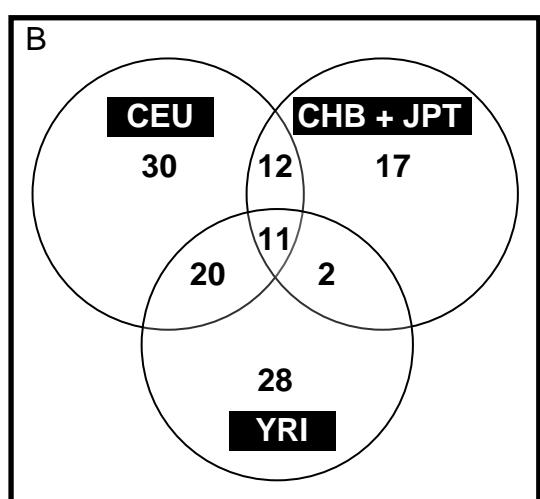

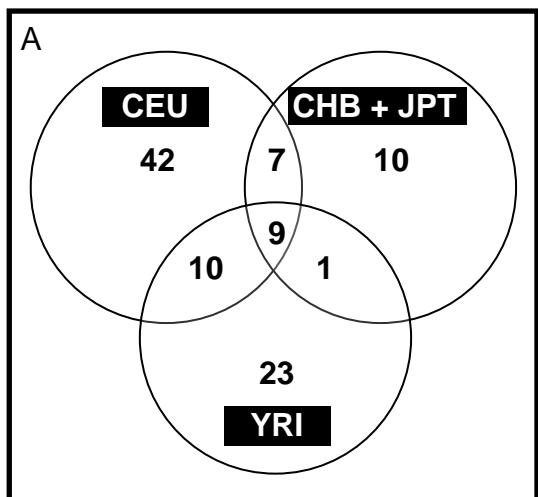

**Figure S5. Evidence of Positive Selection in FOXP2 Targets from Three Separate Chromatin Immunoprecipitation Genomic Screens Using a Ranking Strategy**

FOXP2 targets identified by ChIP in mouse and human brain are enriched with positive selection in CEU. The dashed horizontal line depicts the threshold of the  $-\log_{10}p$  value for multiple comparisons after applying the Bonferroni correction.

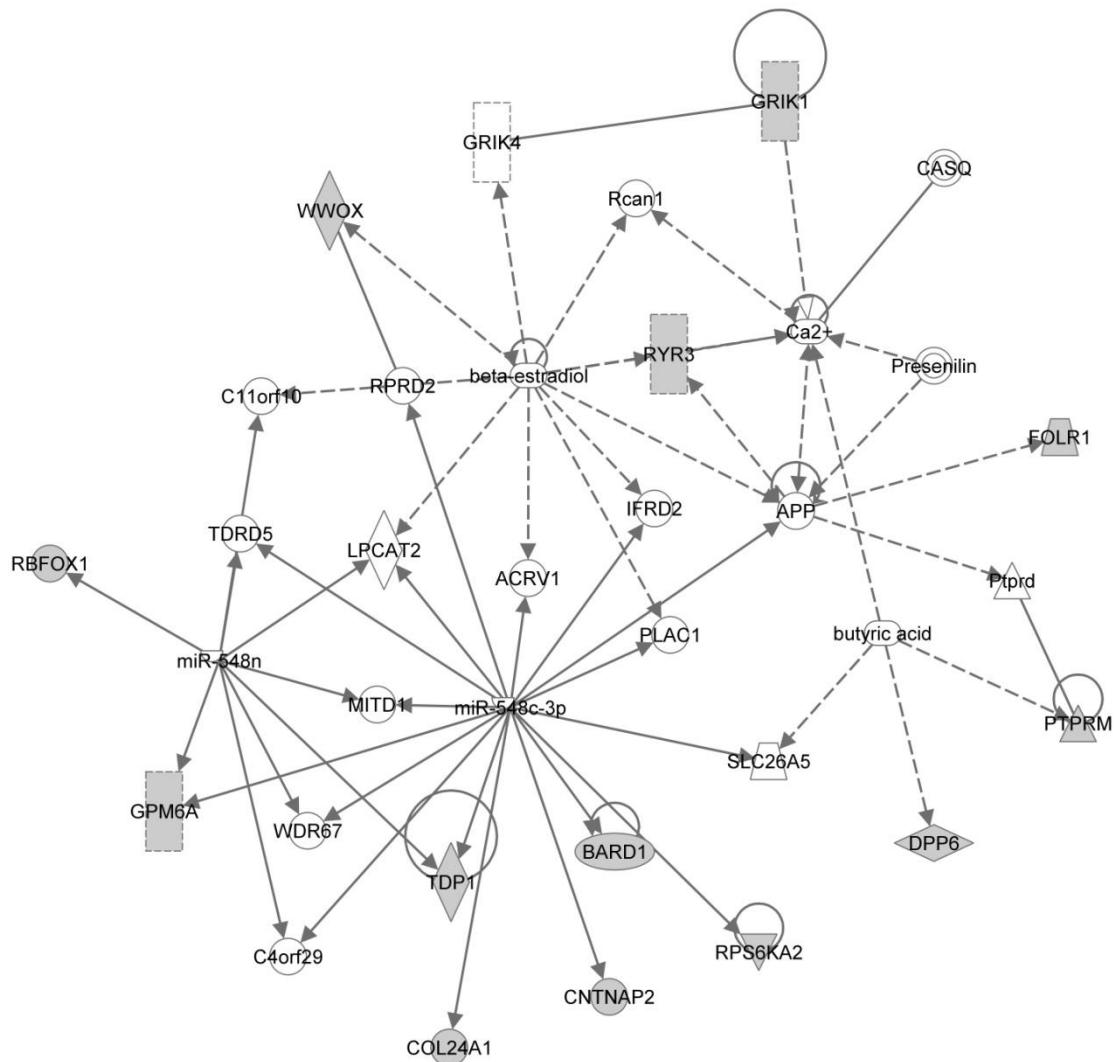

**Figure S6. Number of FOXP2 Targets that Are Significant Outliers in the CEU, CHB + JPT, and YRI Populations**

Mouse brain (A), human brain (B), and human neuronal cell (C). Comparison shows the number of 150 kb regions with at least two significant ~10 kb windows in FOXP2 targets (vertical red lines) with the distribution of such regions in 1,000 matched control lists.

**Figure S7. Venn Diagram Showing Distribution of FOXP2 Targets that Are Significant Outliers in the CEU, CHB + JPT, and YRI Populations**

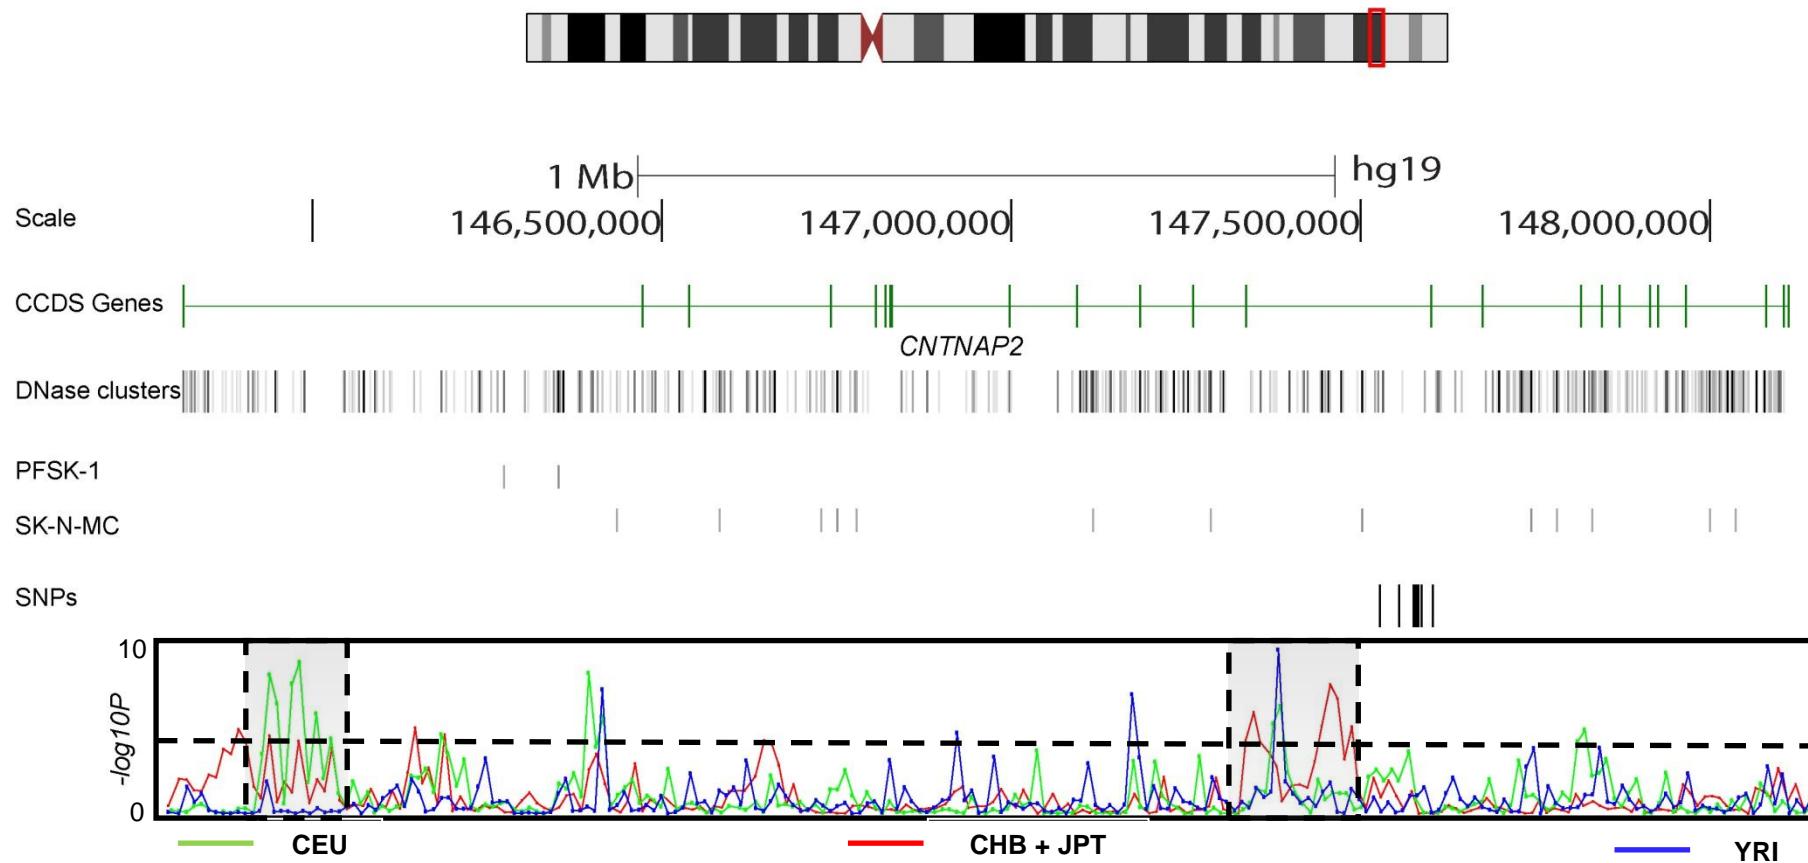

Mouse brain (A), human brain (B), and human neuronal cell (C).

## Figure S8. Ingenuity Pathway Analysis

Network shows FOXP2 targets (grey boxes) selected in CEU that are associated with cardiac arteriopathy.

**Figure S9. Selection Signals in a 2 Mb Region on Chromosome 7 that Harbors the *CNTNAP2* Gene**

The first track shows the *CNTNAP2* gene with its exonic and intronic boundaries (CCDS). The next three tracks show region of open chromatin and FOXP2 binding sites based on ChIP-Seq in two neural cell lines; PFSK-1 and SK-N-MC. FOXP2 binding sites are represented by vertical lines in these two tracks. The SNPs track displays variants that form a risk haplotype associated with language deficits in SLI4 (Specific Language Impairment 4; OMIM# 612514). The combined p value track was generated from the separate probabilities of Tajima's D, Fay and Wu's H and CLR and the threshold represented by the dashed line, incorporates the 5% FDR for each population. Peaks above the threshold in the graph represent regions (shaded areas) that are enriched with positive selection. The window on left shows a selected region in CEU. The one on the right is selected in all populations. Variants associated with the risk haplotype lie to the right of the second window.

**Table S1A. Comparison of Sequence Coverage (per Base/Gene/Individual) between FOXP2 Targets and Matched Controls in CEU, CHB + JPT, and YRI**

	CEU	CHB + JPT	YRI
Mouse brain	0.1078	0.1528	0.9397
Human brain	0.2724	0.3506	0.3046
Human neuronal cell	0.0925	0.2412	0.1209

Sequence coverage across three sets of FOXP2 target genes and controls in each population were compared using the two-sample Kolmogorov-Smirnov test. Test p values for each population comparisons are shown.

**Table S1B. Tajima's D and Y Estimates for Nonoverlapping 10 kb Windows on Chromosome 11 Are Positively Correlated**

	CEU	CHB + JPT	YRI
Windows	12446	12224	12601
Y estimate mean (range)	0.4563 (-2.61 – +4.01)	0.8430 (-2.58 – +3.96)	0.4563 (-2.25 – +3.15)
Tajima's D mean (range)	0.7041 (-2.32 – +4.62)	1.3123 (-2.17 – +4.73)	0.4563 (-2.05 – +4.00)
Spearman's correlation	0.957*	0.976*	0.971*

\*p value < 0.0001.

**Table S2. Summary Statistics of Frequency-Spectrum-Based Neutrality Tests in Control Gene Sets**

A

Number (n) of Genes	Pop	Permutation Test p Values (Unmatched Control List)			
		Combined p Value	CLR	Tajima's D	Fay and Wu's H
Positive controls 7 or more (n = 166)	CEU	$1.4 \times 10^{-10}$	0.0001	$< 3.2 \times 10^{-5}$	$< 3.2 \times 10^{-5}$

	YRI	<b>0.0018</b>	<b>0.0048</b>	0.9996	<b>0.0055</b>

Permutation test p values for the composite likelihood ratio (CLR), Tajima's D, and Fay and Wu's H test statistics and their combined p values. Significant differences below the threshold for multiple comparisons, using a Bonferroni correction, are highlighted in black.

(A) Positively selected genes lay in regions identified as being under selection in  $\geq 7$ ,  $\geq 8$ , or  $9$  genome-wide scans<sup>2</sup> or a smaller dataset of  $11$  genes that were shared between studies.<sup>2,15,26</sup>

(B) Negative control gene lists excluded  $2,601$  protein-coding genes reported to be under positive selection in the literature. Gene sets of equivalent size were compared with the remaining protein-coding genes using permutation tests.

**Table S3. Summary Statistics of Frequency-Spectrum-Based Neutrality Tests for FOXP2 Target Gene Sets**

Populations	Mouse Brain (Verne et al. 2011)											
	Mann-Whitney U-Test (Matched)				Permutation Test (Unique Matched)				Permutation Test (Unmatched)

Nonparametric comparisons of the composite likelihood ratio (CLR), Tajima's D (D), and Fay and Wu's H (H) values between FOXP2 targets identified in three different studies and matched and un-matched control gene sets. For the Mann-Whitney U Test the number of comparisons (out of 1,000) in which the ranked test statistics were significantly different from expectation ( $\alpha = 0.05$ ) were estimated by the Fisher's Exact Test. Significant p values below the cut-off for multiple comparisons are highlighted in black (i.e.  $< 0.0056$  with the Bonferroni correction).

**Table S4. FOXP2 Targets Enriched with Positive Selection**

Ensembl Gene ID	MIM Number	Gene	Description	Study	Populations
ENSG00000078328	605104	<i>RBFOX1</i>	RNA binding protein, fox-1 homolog ( <i>C. elegans</i> ) 1	Spiteri et al. 2007; Vernes et al. 2011	CEU, CHB+JPT, YRI
ENSG00000105854	602447	<i>PON2</i>	paraoxonase 2	Spiteri et al. 2007; Vernes et al. 2011	CEU
ENSG00000047617	610109	<i>ANO2</i>	anoctamin 2	Spiteri et al. 2007	CEU, CHB+JPT, YRI
ENSG00000071242	601685	<i>RPS6KA2</i>	ribosomal protein S6 kinase, 90kDa, polypeptide 2	Spiteri et al. 2007	CEU, CHB+JPT, YRI
ENSG00000078668	610029	<i>VDAC3</i>	voltage-dependent anion channel 3	Spiteri et al. 2007	CEU, CHB+JPT, YRI
