

Supplemental Table 1. NTX effects on reward-seeking during brief extinction sessions. Ratios of lever presses after NTX administration to presses after saline were calculated for each rat. All values are mean \pm SE. A 3-way ANOVA of ratios by dose, reinforcer and schedule yielded no main effects or interactions (all F 's <1.4 , p 's >0.05), indicating that the effect of NTX was similar for each dose across all groups.
