

SUPPLEMENTARY DATA

Supplementary Figure 1. Bar graph showing Rac1-GTP binding in L6 myotubes in lysate (50 μ g protein loaded) incubated with either GDP (1 mM) or GTP- γ S (0.1 mM) for 20 min at 30°C on a shaker (400 rpm), and in response to insulin (100 nM, 20 min, n=6), measured by the commercially available Rac1 GLISA kit. Values are mean \pm S.E.M.
