

SUPPLEMENTARY FIG. S8. NaHS treatment does not induce Cbl and ERK phosphorylation in L6 myotubes and 3T3-L1 adipocytes in the presence of insulin (100 nM). Effects of a 60-min treatment with various concentrations of NaHS (10– $100 \mu M$) on Cbl and ERK phosphorylation. (A, B) Cbl phosphorylation in L6 and 3T3-L1 cells. (C, D) ERK phosphorylation in L6 and 3T3-L1 cells.
