

**Supplementary figure 2.** Effect of miRNA-mediated eEF1A2 downregulation on MCF7 cell migration measured in the wound healing assay (54 hours after transfection). MCF7 cells were transfected with either mir-663, mir-744 precursor, or siRNA against eEF1A2. Scrambled miRNA precursor or no-target siRNA were used as controls. Error bars represent SDs. \* $P < 0.05$  vs. control.  $n = 3$ . Student's  $t$  test.
