

Down-regulation of Sox7 is associated with aberrant activation of Wnt/ β -catenin signaling in endometrial cancer - Chan et al

Supplementary Figure 1. Quantitative RT-PCR analysis showed that *Sox7* was significantly underexpressed in endometrial cancer ($P = 0.005$). Besides, the underexpressed was inversely correlated with two Wnt/ β -catenin signaling targets; *FGF9* ($P = 0.0048$) and *SFN* ($P = 0.008$)
