

Supplementary Figure 1.

Supplementary Figure 1.

Characterization of the B⁰AT3 antibody. The antibody specificity was investigated by immunohistochemistry on mouse CNS tissues. Double immunohistochemistry with the custom made polyclonal B⁰AT3 antibody made in rabbit (red) and the commercial available B⁰AT3 antibody made in mouse (green) on brain (row A) and spinal cord (row B) tissue. The cell nucleus marker DAPI was stained in blue. **(A)** Co-localization of B⁰AT3 antibodies in cells in cerebral cortex in brain (Bregma -1.06). **(B)** Co-localization of B⁰AT3 antibodies in motor neurons and other cells in spinal cord (L2). Scale bar: 10 μ m. The immunohistochemistry indicated that the custom made polyclonal B⁰AT3 antibody was epitope specific.

Supplementary Figure 2.

Protein localization of B^0AT3 to glutamatergic neurons and vesicles. Red staining is B^0AT3 , green staining is VGLUT1 and VGLUT2 respectively and blue is DAPI. **(A)** Overlapping expression between B^0AT3 and VGLUT1 in cerebral cortex in the brain. **(B)** Overlapping expression for the vesicular marker VGLUT2 and B^0AT3 in cerebral cortex in the brain.

Supplementary Table 1. CNS expression of *Slc6a17* mRNA in mouse brain. The scale of estimated *Slc6a17* mRNA expression in the table; (+++) high expression, (++) medium expression, (+) low expression, and (-) not detected.
