

Supplemental Figure Legend

Absolute number of peripheral blood CD8a/b⁺ T cells and its subsets in samples from the four anti- α 4 β 7 mAb treated and the four control animals. A) The data on the absolute number of CD8a/b⁺ T cells is shown as a line diagram with solid lines representing the animals that received the anti-a4b7 mAb and the broken lines represent the control animals. The arrows at the bottom indicate the times the anti-a4b7 mAb was administered. The rest of the data shown are displayed as bar graphs for ease of display. Data shown are for B) CCR5 expressing CD8⁺ T cells C) CD25 and FoxP3 expressing CD8⁺ T cells.
