

Supplementary information, Figure S4

Figure S4 Ethanol increases the binding of PKC ϵ to ALDH2. Western blotting and immunoprecipitation (IP) showing: (A) The PKC ϵ phosphorylation (P-PKC ϵ) and the binding of PKC ϵ to ALDH2. (B) Phosphorylation of PKC α and the binding of PKC α to ALDH2. $n = 3$. Mean \pm SD. Data were analyzed by Student's t test. ** $P < 0.01$, n.s., not significant.
