

Figure S1. Related to Figure 1. Overlay of gel filtration chromatograms of PR70 (108-519) (dashed blue curve), B'ε (dashed orange curve), and the holoenzymes containing PR70 (108-519) (blue curve) and B'ε (orange curve), respectively. Although PR70 (108-519) (14.8 ml) appears to be smaller than B'ε (14.5 ml), the holoenzyme containing PR70 (108-519) (13.0 ml) has a comparable or even a slightly larger size than the holoenzyme containing B'ε (13.1 ml).
