B

Detailed description: This Western blot shows protein expression levels for eight genes. The lanes are labeled at the bottom: Mob1, CTMP, LDHA, CycA, Mad7, RGS1, Ube2Z, and p53. Each lane contains multiple protein bands. Arrows point to specific bands in several lanes: a prominent band in the Mob1 lane at the top of the gel; a band in the LDHA lane; a band in the CycA lane; a band in the Mad7 lane; a band in the RGS1 lane; a band in the Ube2Z lane; and a band in the p53 lane.
