

## Supplemental Material

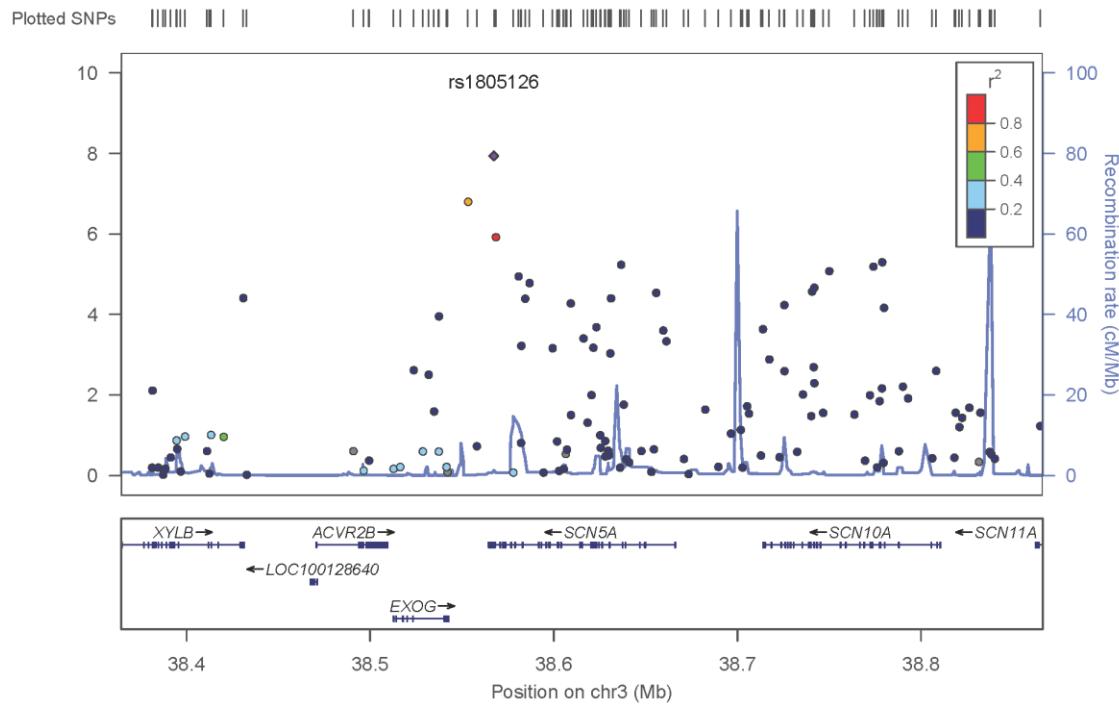

**Supplemental Table 1: Replicated SNPs in the QRS GWAS analysis.** Reported betas and p-values for eMERGE analysis are adjusted for sex, and all betas for CHARGE and eMERGE analyses are for the coded allele.

| CHR | SNP        | Location  | eMERGE QRS   |                        |             |          | CHARGE QRS   |                        |             |          |                   |
|-----|------------|-----------|--------------|------------------------|-------------|----------|--------------|------------------------|-------------|----------|-------------------|

\*The genome-wide association analysis results for these variants (best or near-best association at each locus/gene in replication analysis) are shown in Table 3.

\*\*This SNP was coded on the opposite strand from that in the CHARGE study. Therefore, while the allele is not identical, the direction of effect is the same.

**Supplemental Figure 1:** LocusZoom plot of the region in chromosome 3 in which most of the replicated associations (18/23) were identified. All variants with  $p < 10^{-4}$  in the eMERGE data set were replicated at  $p < 5 \times 10^{-8}$  in the CHARGE data set.

**Supplemental Table 2: PheWAS associations for replicated SNPs (N=23).** Data for all associations with P<0.01 are shown. ICD9 codes for given associations can be downloaded from <http://knowledgemap.mc.vanderbilt.edu/research/content/phewas>.
