

Table S2: Parameter values for the fixed effects in the linear mixed effects model for the first N400 time window (150-300 ms). The model was fit using a maximal random effects structure and a minimal adequate fixed effects structure (see the main text for details). For reasons of readability, only effects approaching significance ( $|t| > 1.9$ ) are reported. In addition, in view of the research questions pursued here, we only report effects of or interactions including TRUE-FALSE. Note that the reference levels for the fixed factors were as follows: TRUE-FALSE: false; SENTENCE-TYPE: general; SPEAKER: control; GROUP: Experiment 1; ROI: left-anterior.

<b>Effect</b>	<b>Estimate</b>	<b>Standard error</b>	<b>t-value</b>
Intercept	-1.27	0.31	-4.07
