

Supplemental Figure 1. Na⁺-K⁺-ATPase mRNA expression in murine small intestine in response to EPEC infection. Real time QRT-PCR was performed in RNA extracted from control and infected mouse small intestine utilizing gene specific primers Na⁺-K⁺-ATPase (alpha subunit) and Histone as an internal control. Data are means ± SEM of values obtained from at least 4 different experiments. **P* < 0.001 vs control.
