The candidate gene, the site of the mutation and its morphological effect are shown. ns: not significant. For body size related traits, ▼ and ▲ represent significant decrements and increments with respect to the control respectively ($p<0.05$). For wing shape, S represents significant differences with respect to the control ($p < P_{\text{Bonferroni}} = 0.0012$). * Significant at 25°C [12, 13].
