All data shown as mean ± SD; P-value computed using general linear model (GLM) adjusted for age strata, sex and HbA1c if baseline and for baseline value, age strata, sex and HbA1c if 24 mo.; nerve conduction studies were also adjusted for temperature of the limb (see Methods). Anti-oxidant effect is the adjusted mean difference between the anti-oxidant group and the placebo group when the p-value is<0.05.
