Mao et al. 10.1073/pnas.1300064110

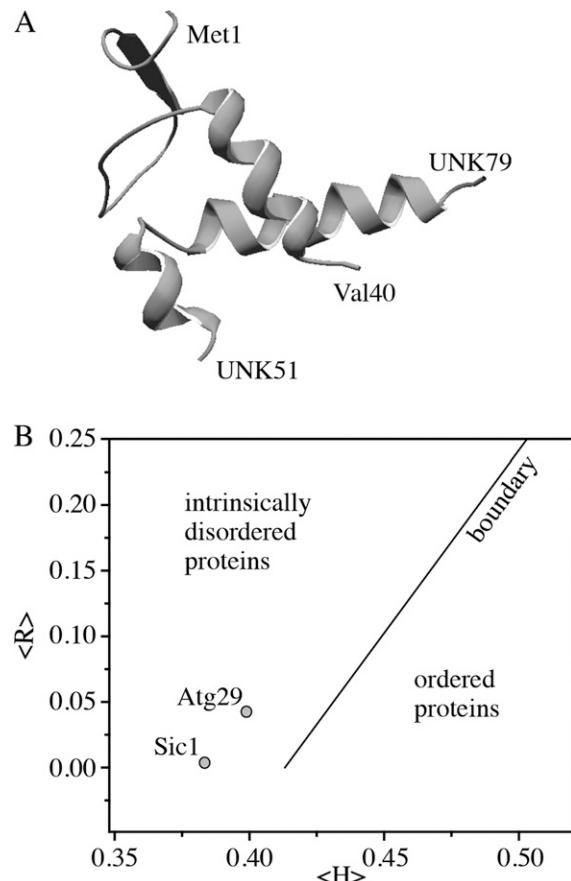

Fig. S1. AuTophaGy-related (Atg)29 is an intrinsically disordered protein (IDP). (A) Ribbon model of Atg29 [Protein Data Bank (PDB) ID code 4HPQ]. End residues on secondary structure elements are labeled. UNK, unknown. (B) Charge-hydrophobicity (CH) plot shows the mean net charge $\langle R \rangle$ as a function of the mean hydrophobicity $\langle H \rangle$. Solid line marks the boundary that separates ordered (globular) proteins from intrinsically disordered proteins. Plot shows the position of Atg29 relative to the boundary and the position of the recently characterized IDP Sic1 from *Saccharomyces cerevisiae* (1).
