Rosa26 LSL transcript

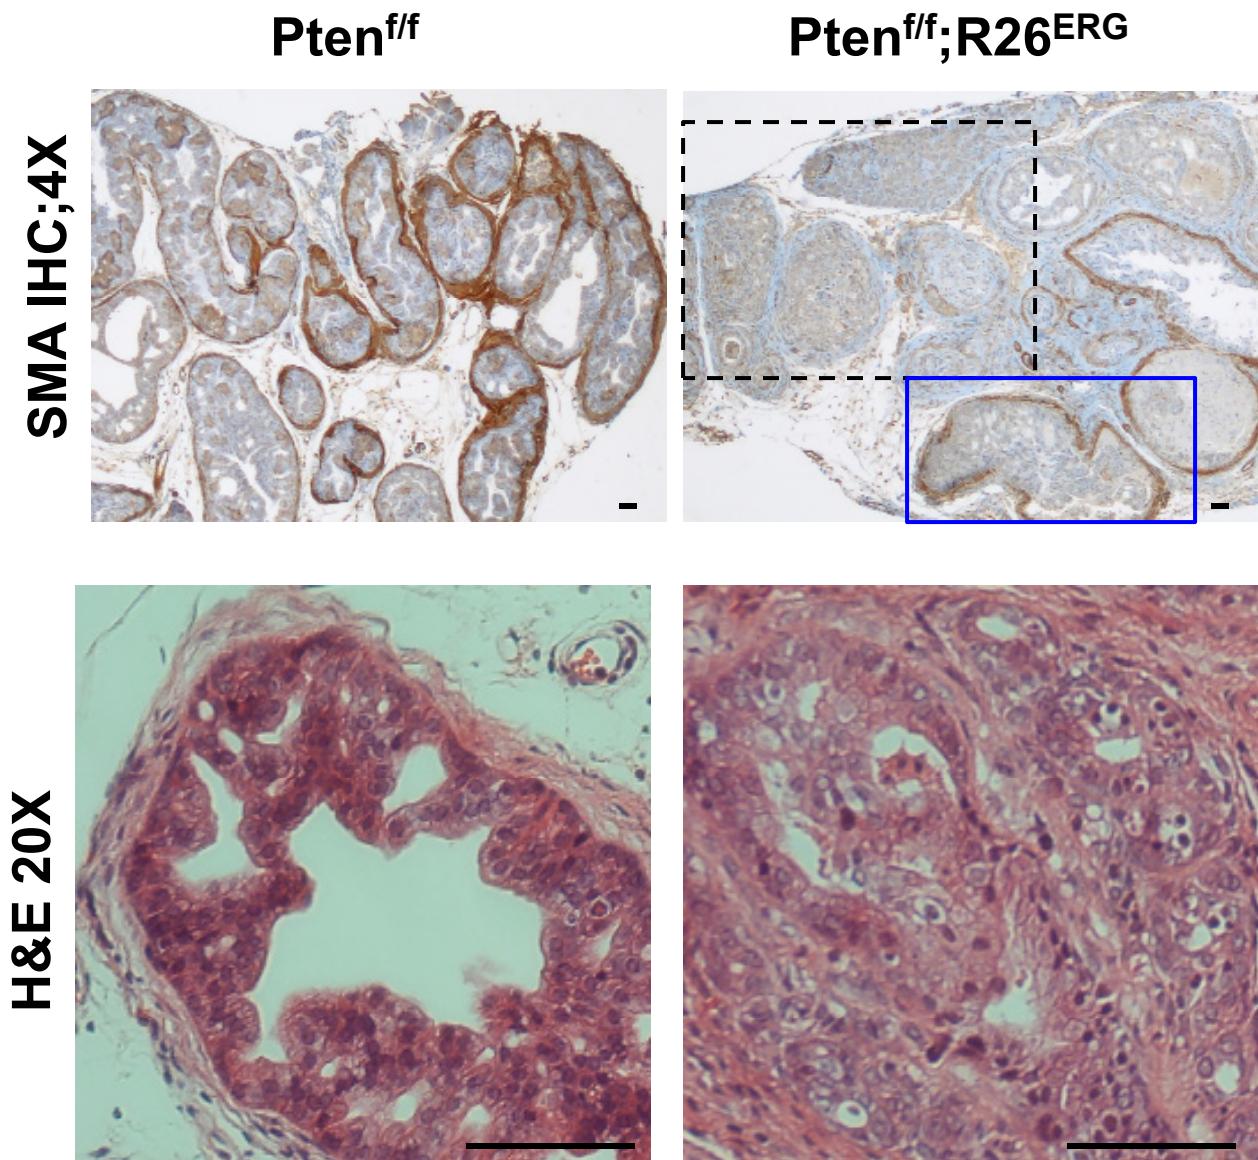

Rosa26 TMPRSS2-ERG transcript

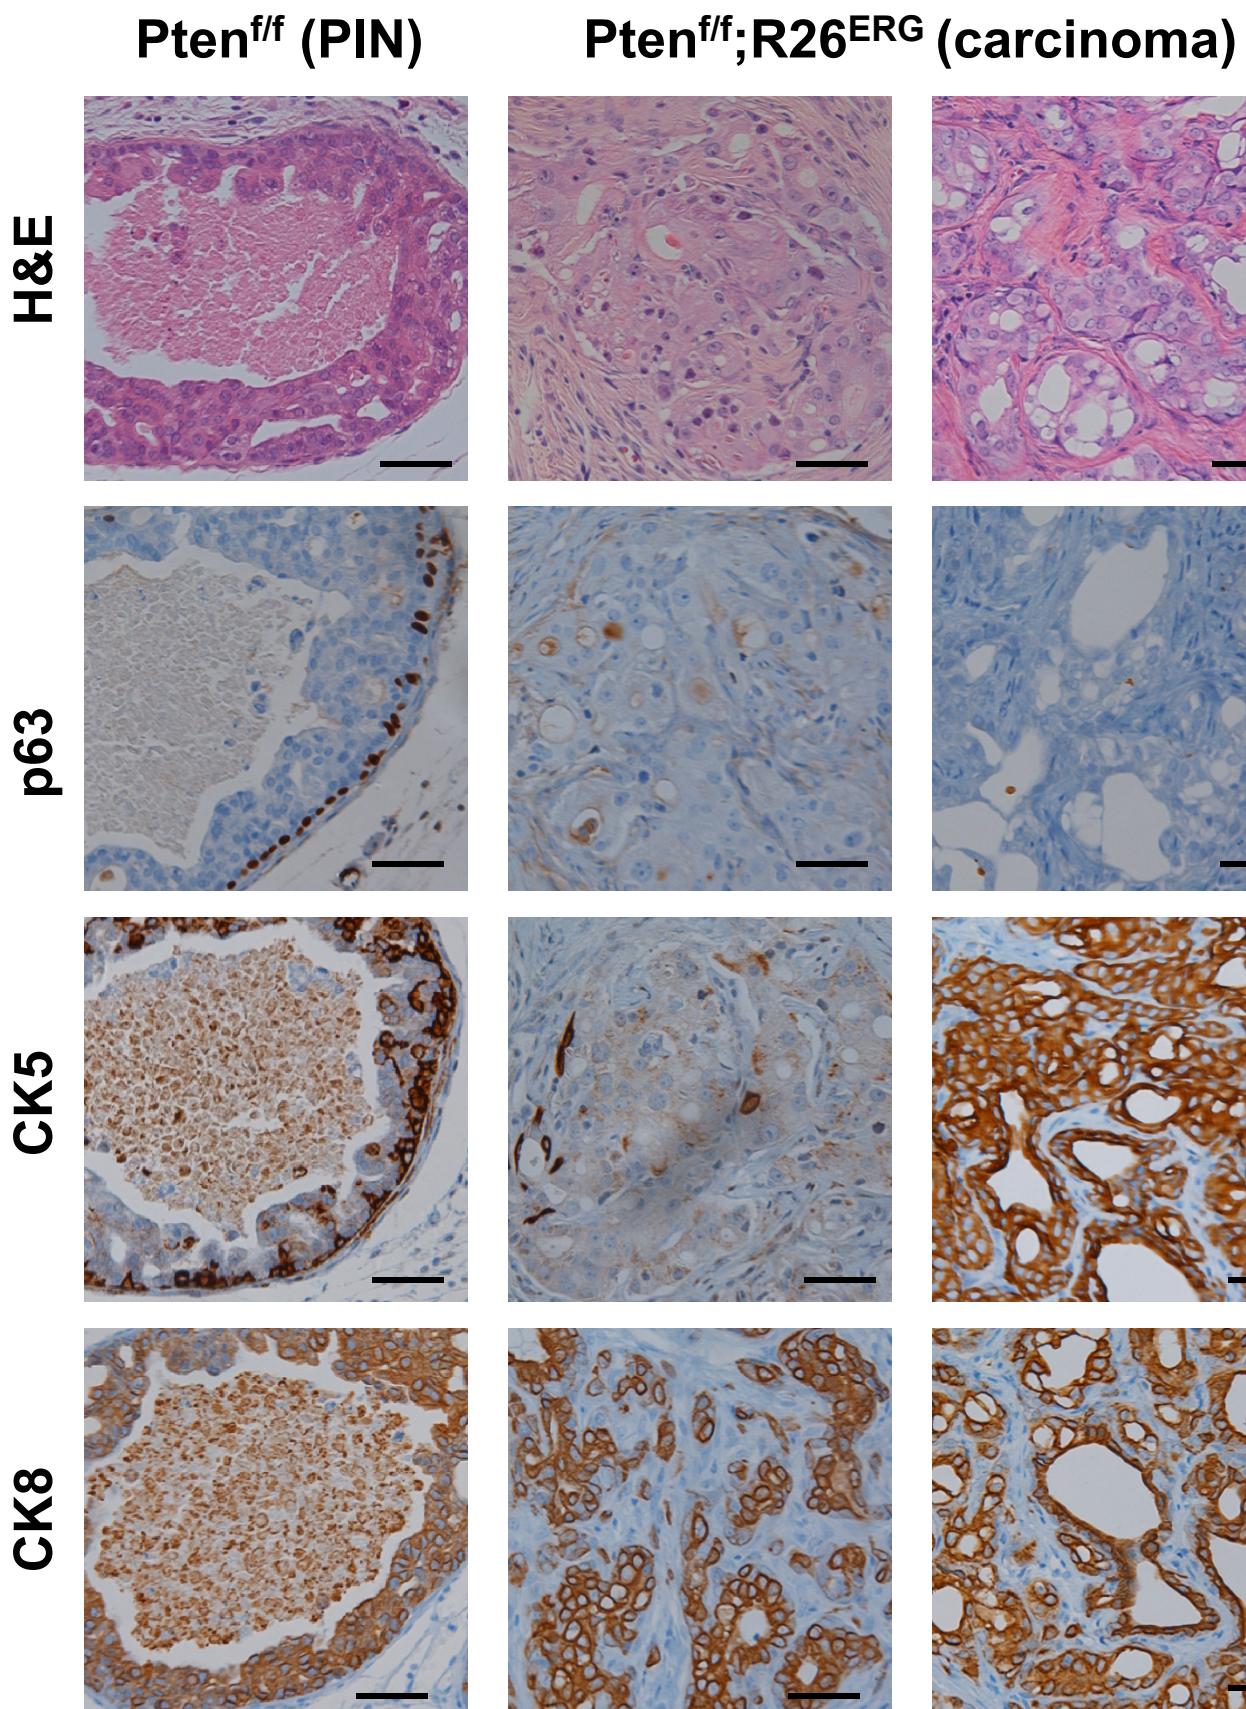

Supplementary Figure 1. Gene targeting strategy. (a) A sequence containing a splice acceptor (SA), followed by a transcriptional STOP (four consecutive poly A) between inverted LoxP sites, followed by the TMPRSS2-ERG cDNA, IRES, EGFP with 3 nuclear localization sequence was inserted in the intron between exon1 and exon2 of the non-coding Rosa26 gene. (b) Schematic of the endogenous Rosa26 transcript, targeted transcript prior to Cre mediated deletion of the STOP cassette, and targeted transcript expressing the transgene. (c) Southern blotting of ES cell genomic DNA digested with EcoRV showing correct targeting in two of three clones.

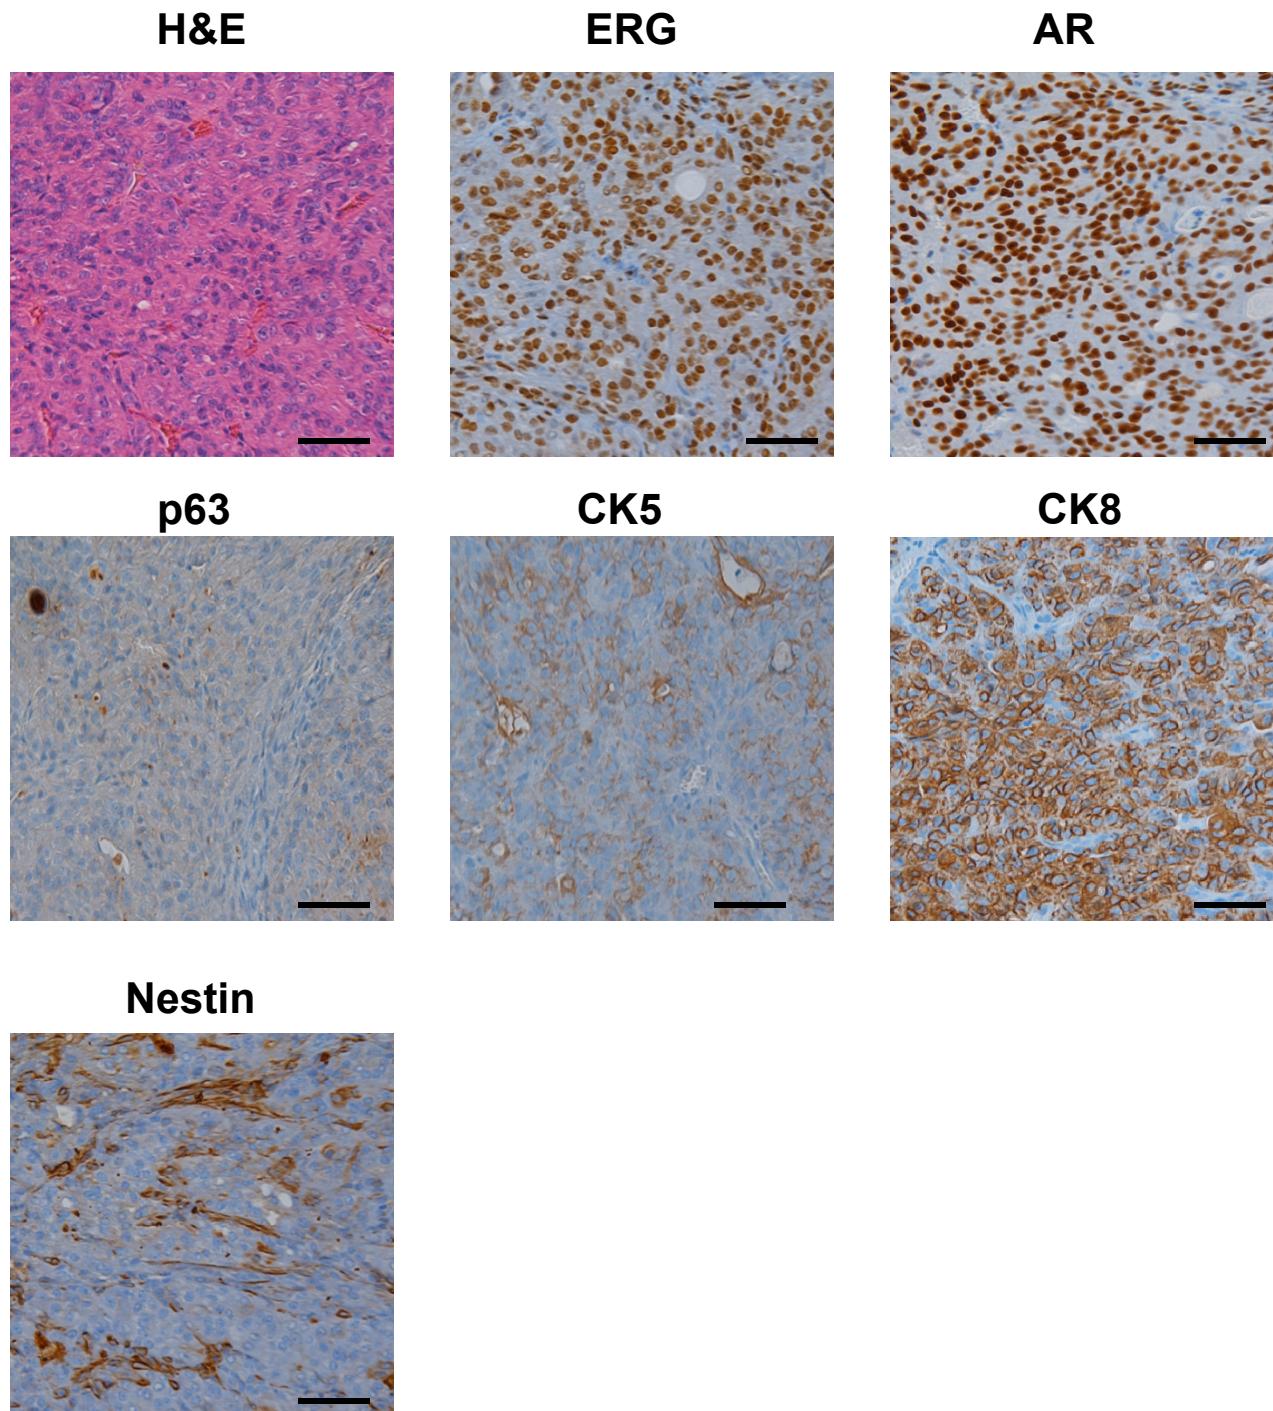

Supplementary Figure 2. EGFP IHC of 8-week old mice. Prostates of 8-week old *Pb-Cre4;R26^{ERG}* mice were examined by EGFP IHC to assess for ERG expression through Cre-mediated excision of the STOP cassette. At this time point, the anterior lobe (AP) demonstrated incomplete expression (Arrows point to EGFP negative nuclei) whereas the ventral (VP) and dorsolateral lobes (DLP) showed uniform expression. Scale bars: 50μm.

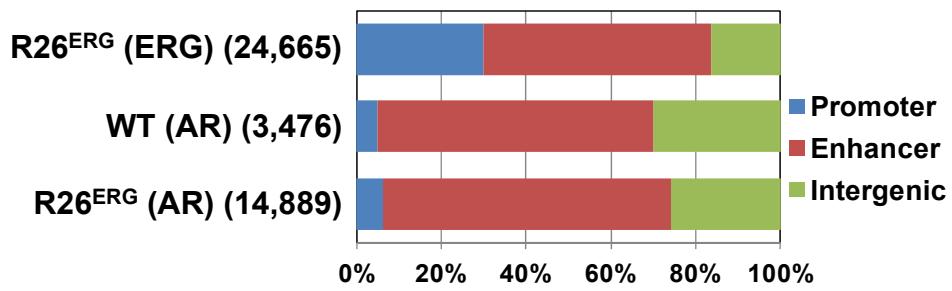

Supplementary Figure 3. Invasive prostate cancer in 8-week old mouse. H&E and SMA IHC of 8-week old *Pten^{f/f}* and *Pten^{f/f};R26^{ERG}* mice. This is an example of early invasive disease in *Pten^{f/f};R26^{ERG}*. Invasive adenocarcinoma is clearly appreciated at low power by loss of smooth muscle actin (SMA) that surrounds non-invasive glands (black dashed box outline invasive regions and blue solid box outlines a non-invasive gland). Higher power view shows that the cells of the invasive regions display increased nuclear pleiomorphism. Scale bars: 50μm.

Supplementary Figure 4. IHC of basal and luminal markers. Representative H&E and IHC of one 6-month old *Pten^{f/f}* prostate (PIN, column 1) and two *Pten^{f/f};R26^{ERG}* prostates (invasive cancer) showing loss of P63, differential CK5 and CK8 positive staining in *Pten^{f/f};R26^{ERG}* invasive cancer. Scale bars: 50μm.

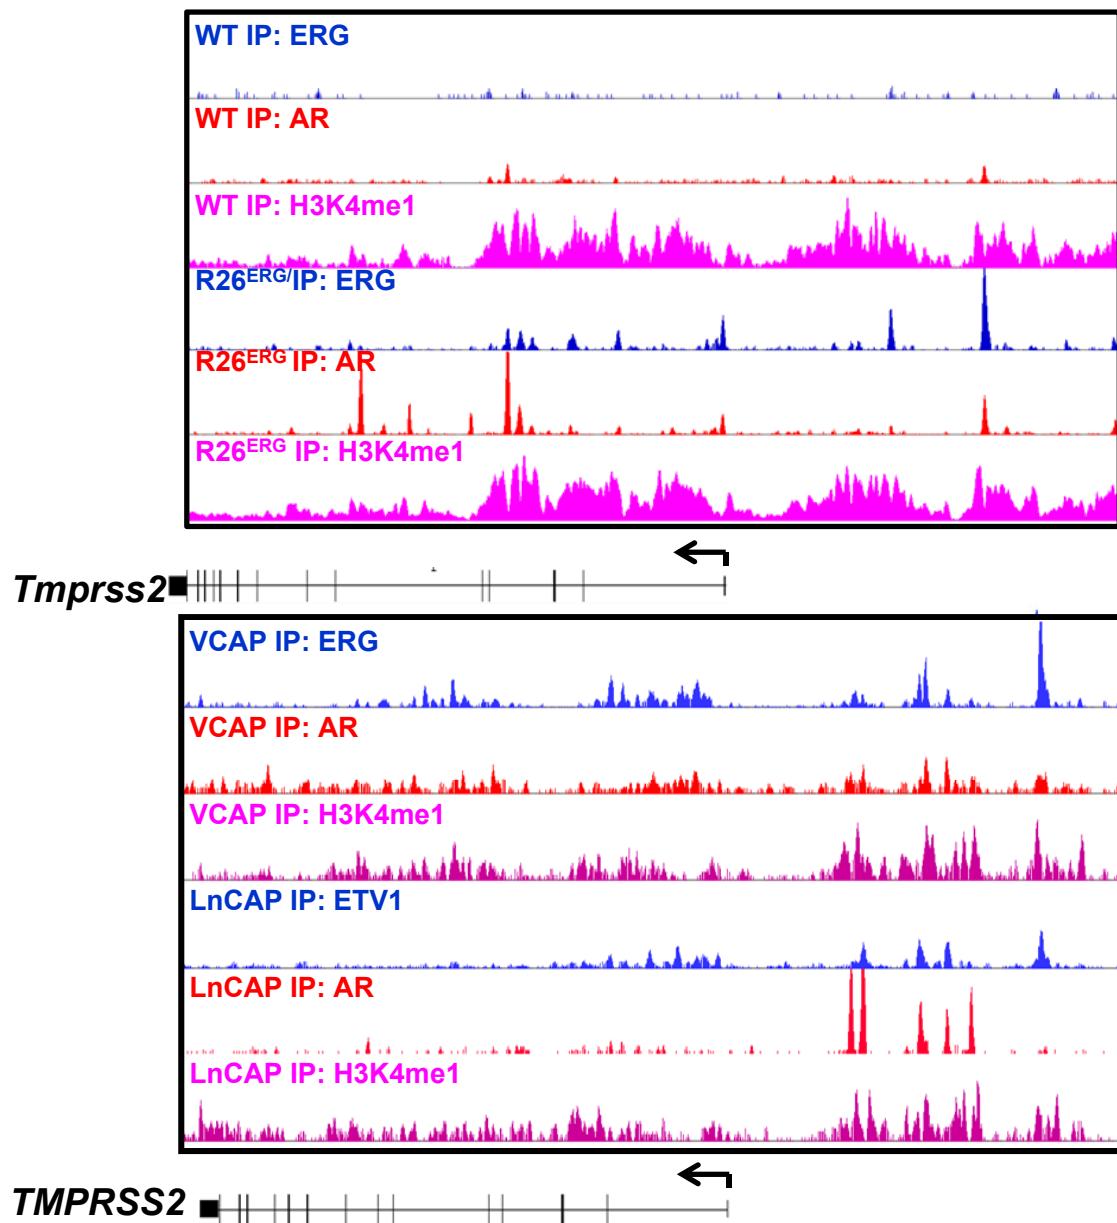

Supplementary Figure 5. IHC of poorly differentiated adenocarcinoma. H&E and IHC of 12-month old *Pten^{ff} R26^{ERG}* mice. IHC shows the tumor stains positive for ERG, AR, and CK8 while it stains negative for p63 and CK5. There is focal nestin staining indicative of focal neuroendocrine differentiation. Scale bars: 50μm.

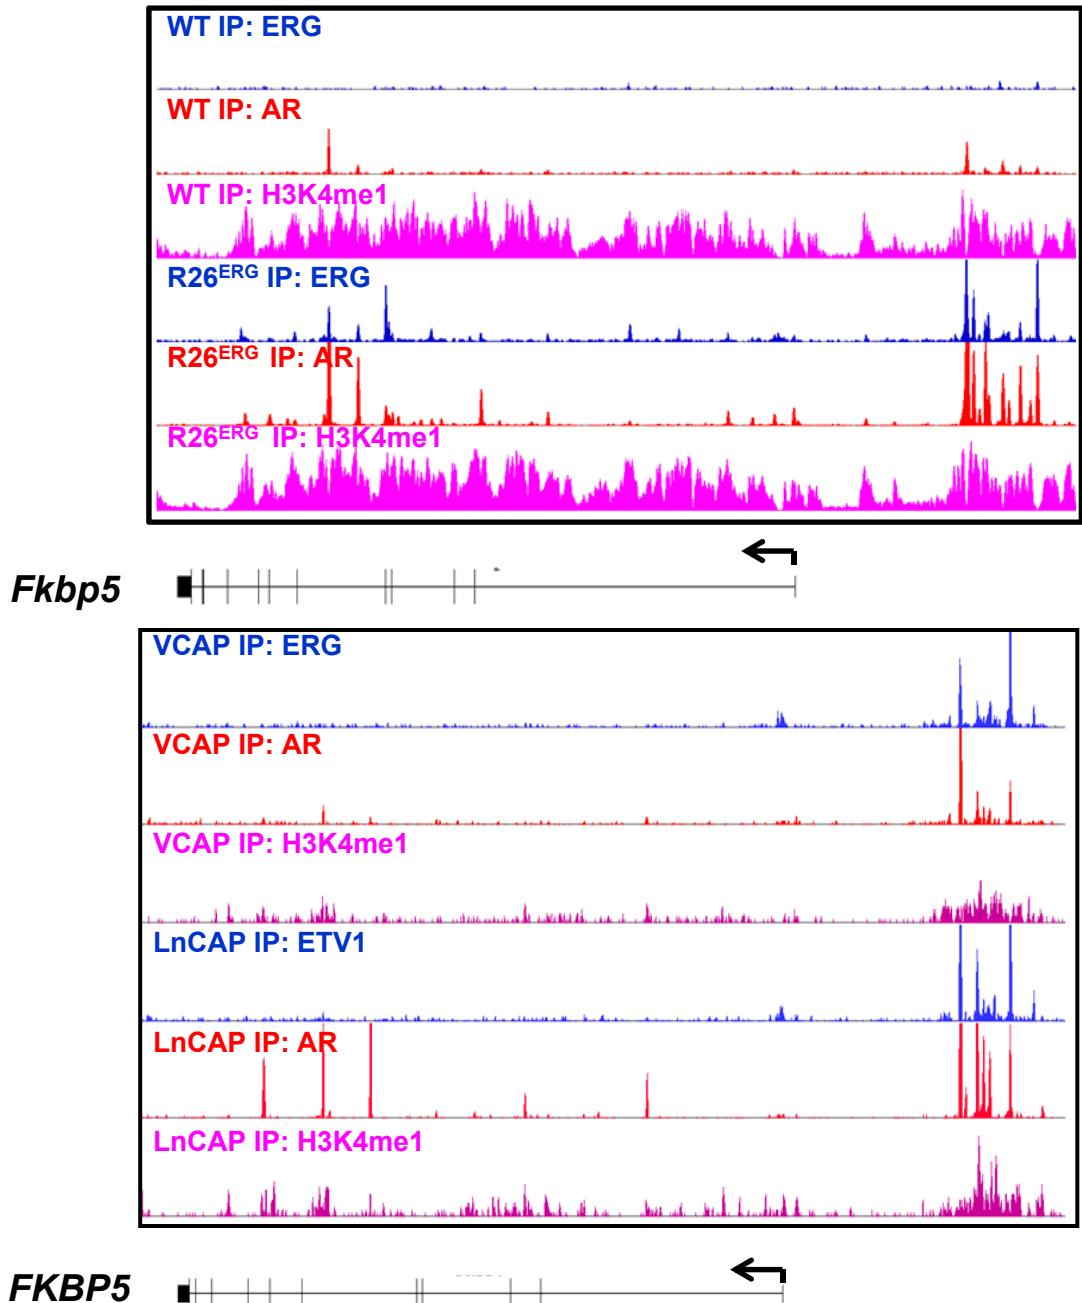

Supplementary Figure 6. Genomic distribution of ERG and AR ChIP-seq peaks.

Number of total peaks is indicated in parenthesis. Promoter: $\pm 2\text{kb}$ TSS (transcription start site); Enhancer: -50kb TSS to $+5\text{kb}$ TES (transcription end site).

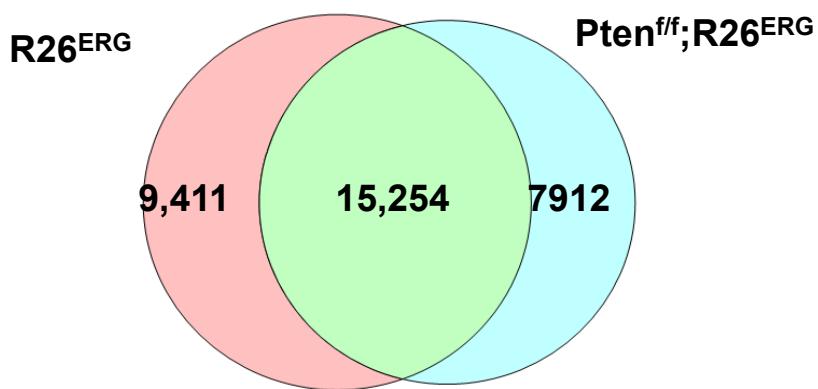

Supplementary Figure 7. Comparison of ChIP-seq peaks of wild-type (WT) and *R26^{ERG}* mouse prostates and homologous genes in VCAP and LnCAP human prostate cancer cell lines at the *Tmprss2* locus.

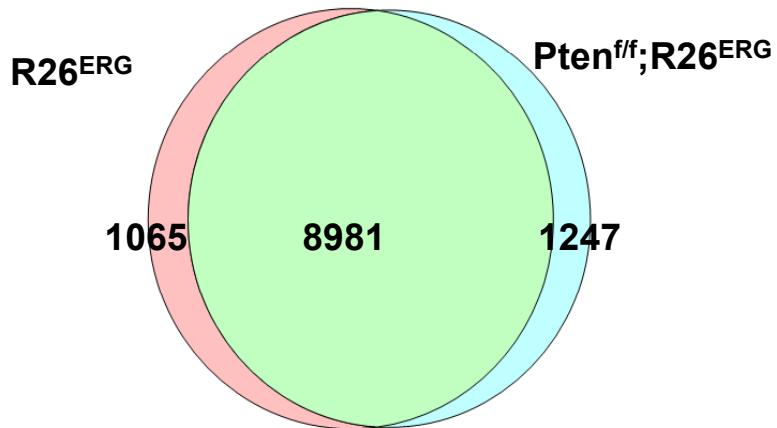

Supplementary Figure 8. Comparison of ChIP-seq peaks of wild-type (WT) and *R26^{ERG}* mouse prostates and homologous genes in VCAP and LnCAP human prostate cancer cell lines at the *Fkbp5* locus.

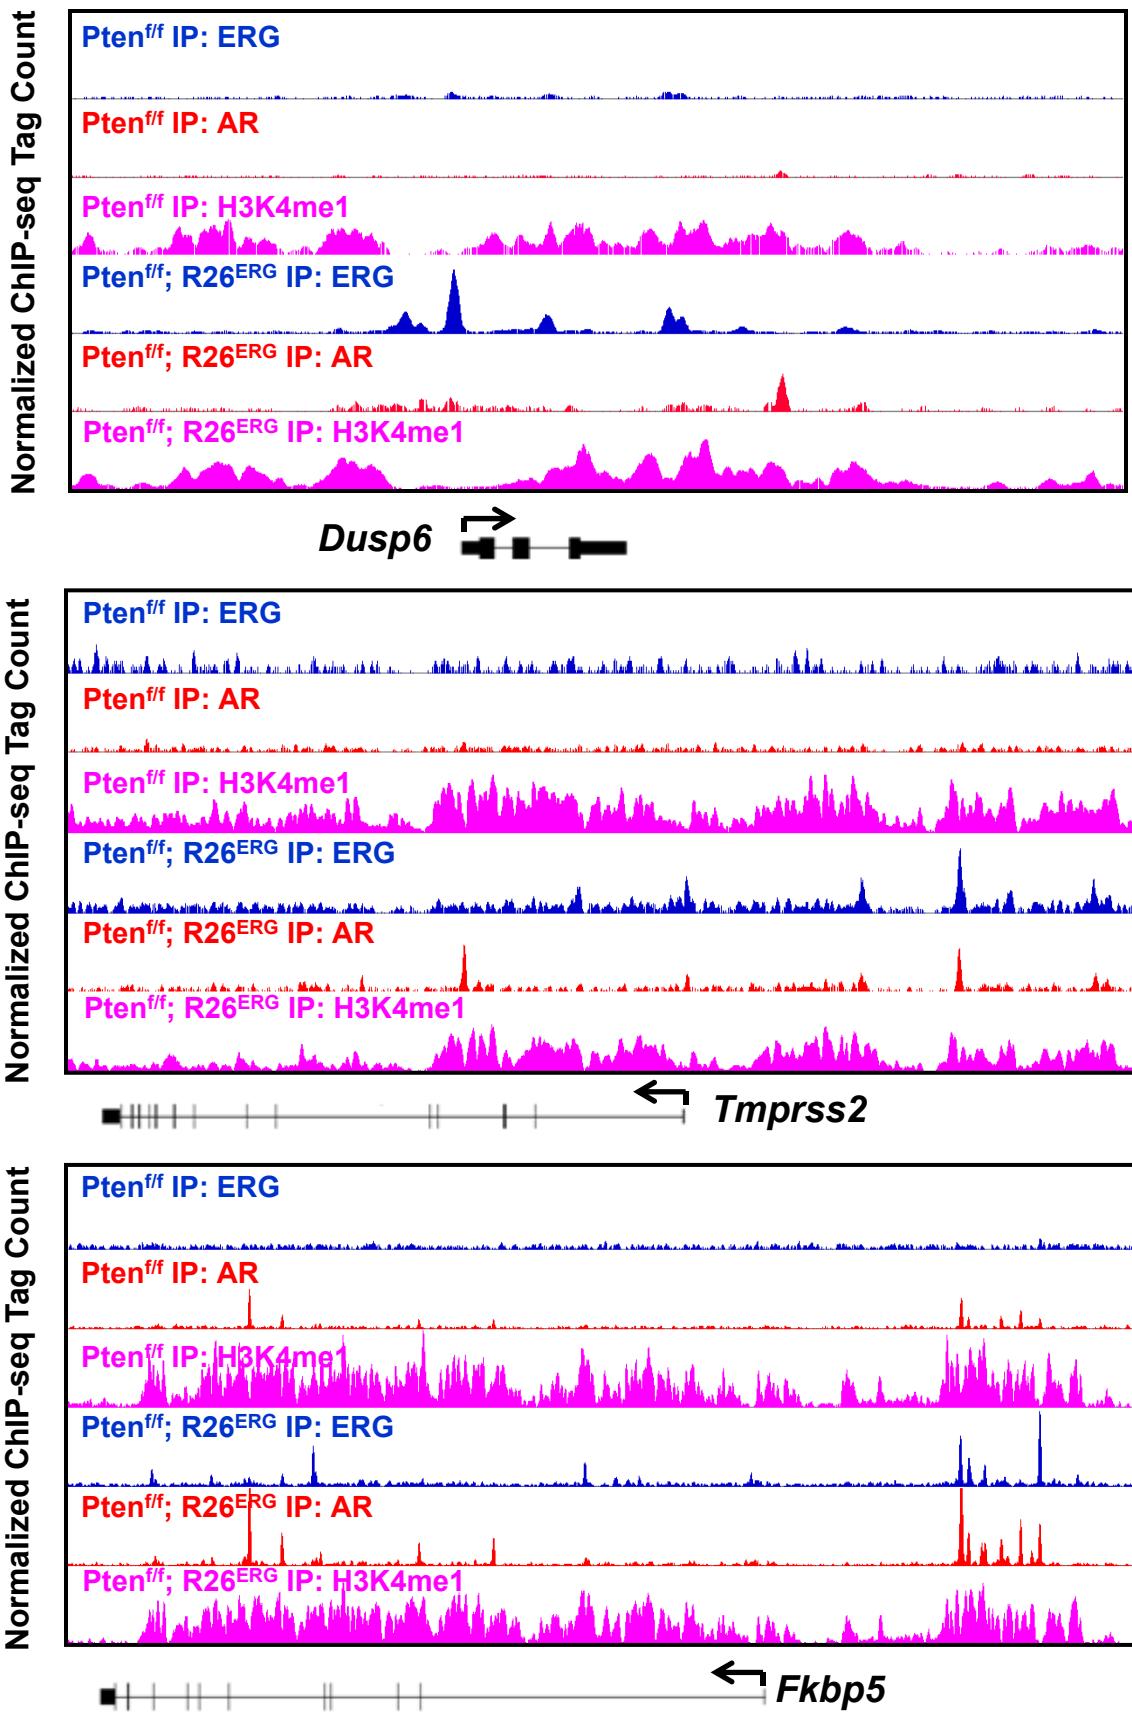

ERG Peaks Overlap

ERG Gene Overlap

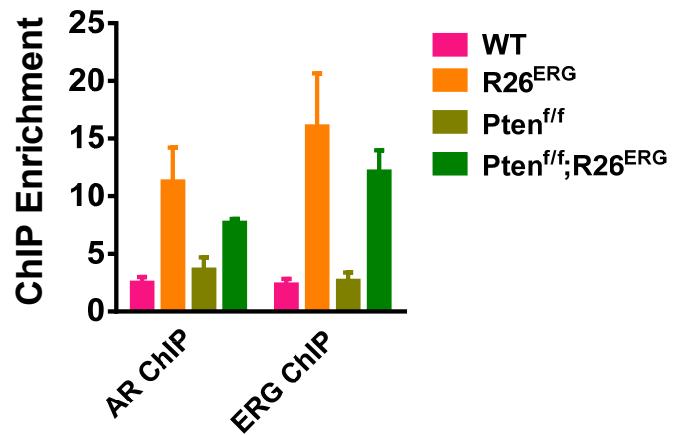

Supplementary Figure 9. Venn diagram of ERG ChIP-seq peak overlap and ERG-bound gene overlap in *Pten^{WT};R26^{ERG}* (*R26^{ERG}*) and *Pten^{f/f};R26^{ERG}* prostates.

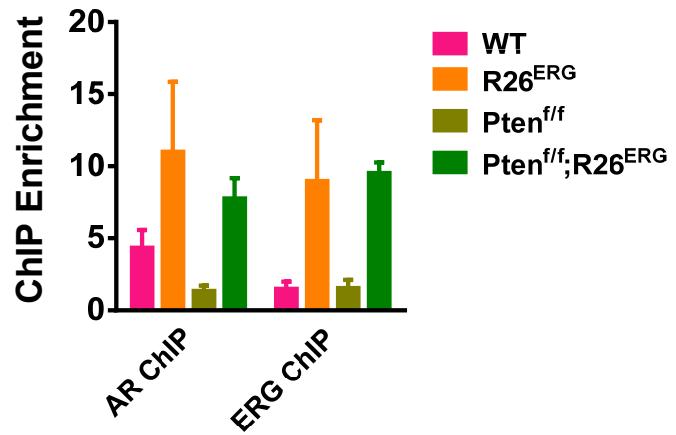

Supplementary Figure 10. ChIP-seq profile of ERG, AR, and H3K4me1 at the *Dusp6*, *Tmprss2*, and *Fkbp5* locus of *Pten^{ff}* and *Pten^{ff};R26^{ERG}* prostates.

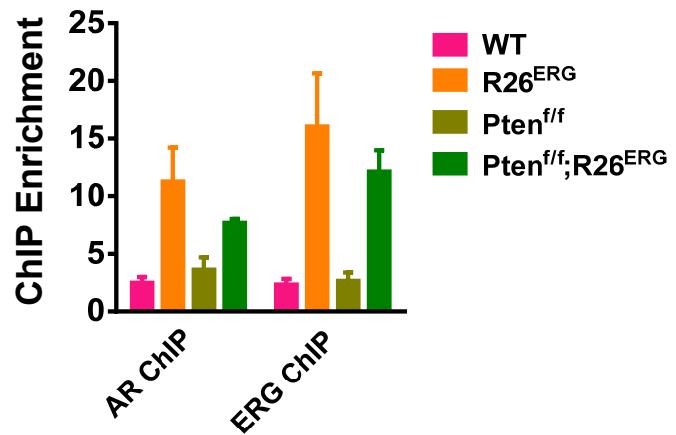

Fkbp5 Enhancer

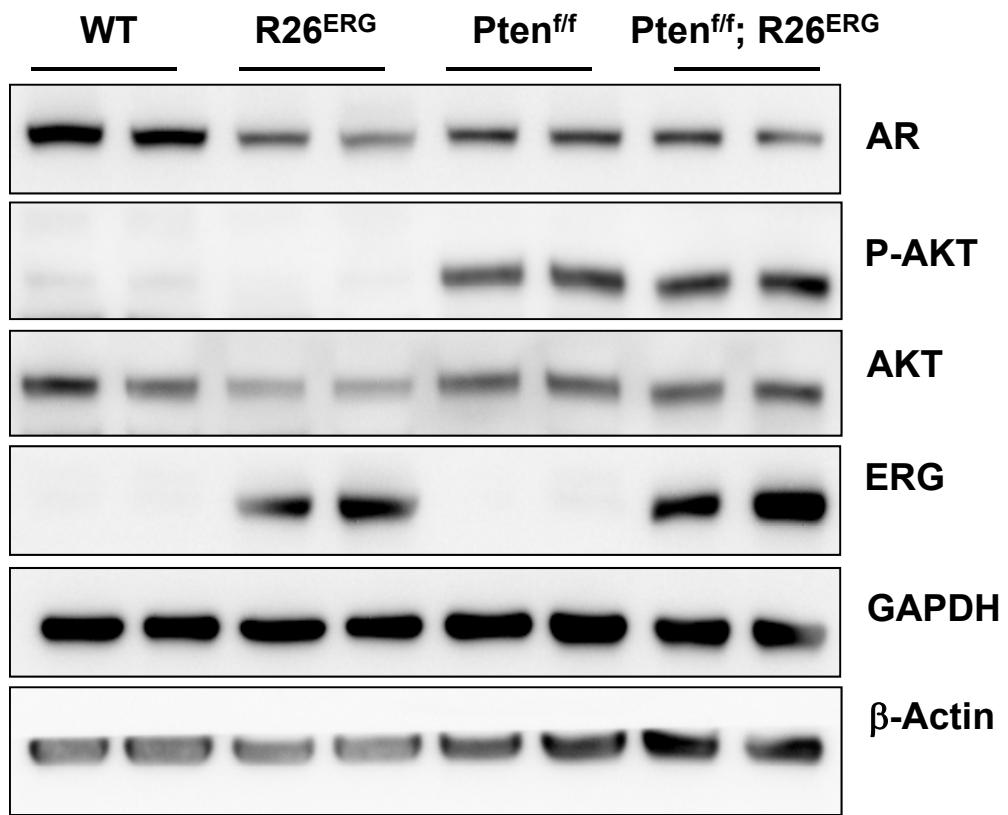

Nkx3-1 Enhancer

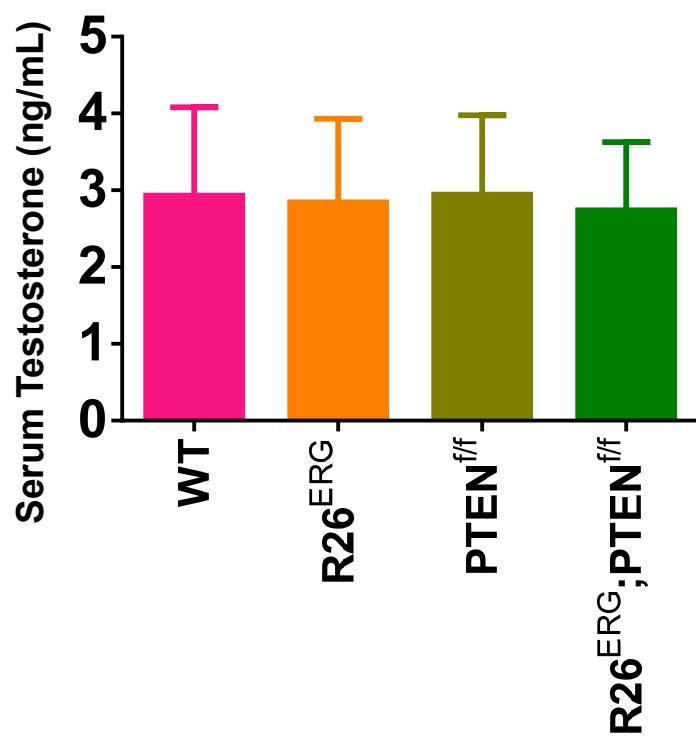

Tmprss2 Enhancer

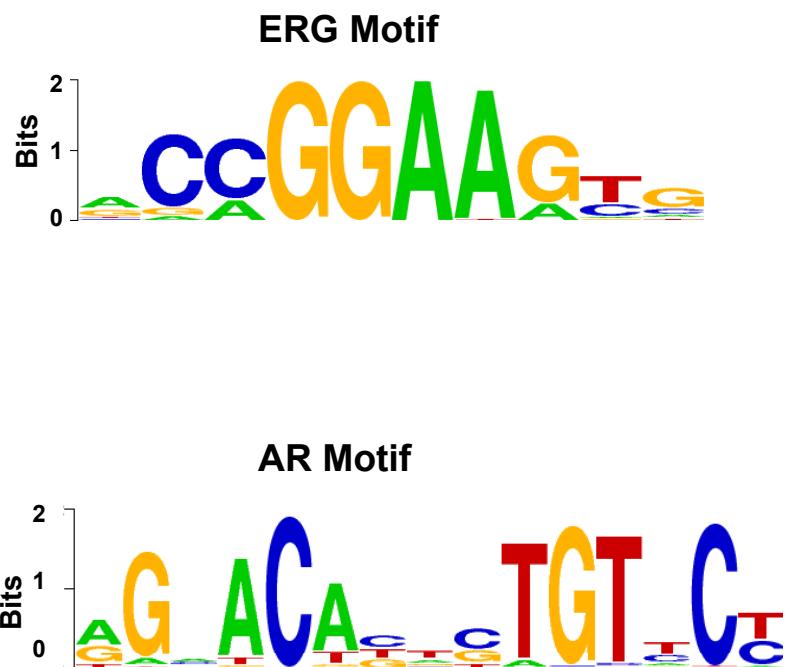

Supplementary Figure 11. ChIP-qPCR of AR and ERG. Chromatin from independent set of WT, R26^{ERG}, Pten^{ff} and Pten^{ff};R26^{ERG} prostates were immunoprecipitated with anti-AR, anti-ERG, and anti-rabbit IgG antibodies. qPCR was performed at the *Fkbp5*, *Nkx3-1*, and *Tmprss2* enhancers and relatively enrichment over IgG is shown (mean ± SD).

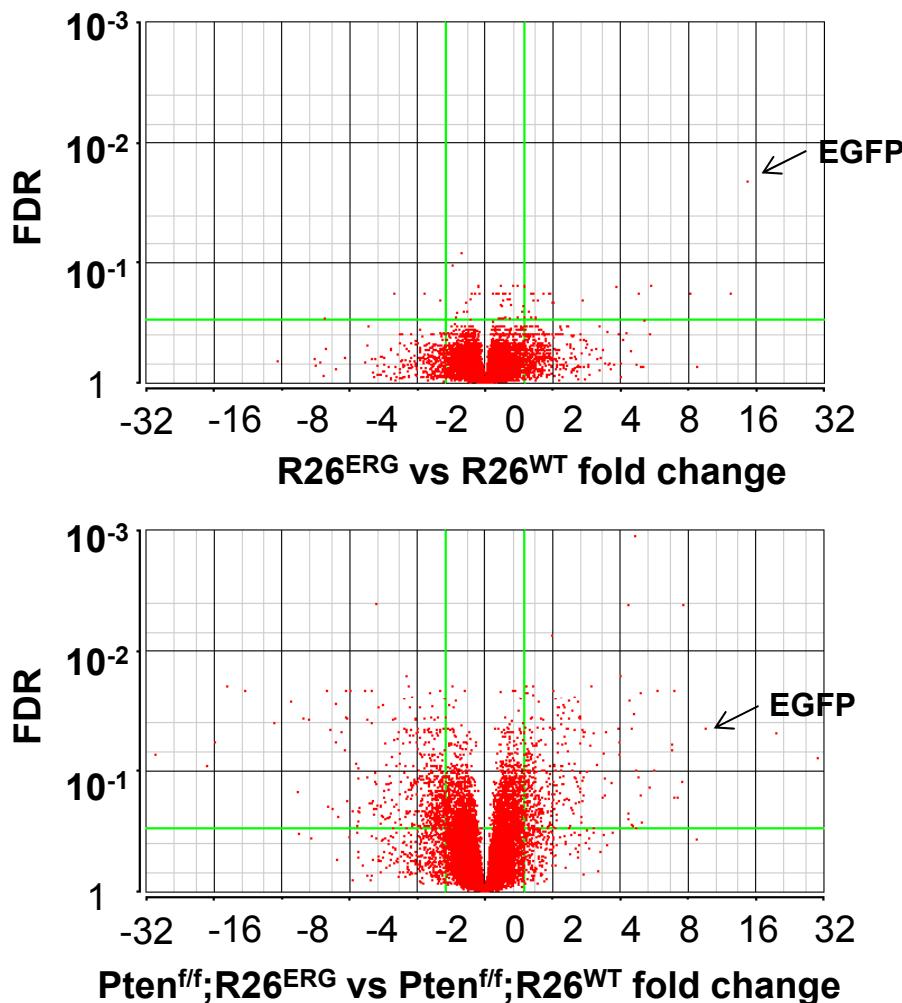

Supplementary Figure 12. ERG expression and AKT phosphorylation status in mouse prostates. Western blots of the 6-month old prostate lysates of WT, $R26^{ERG}$, $Pten^{ff}$ and $Pten^{ff};R26^{ERG}$ mice using the indicated antibody is shown.

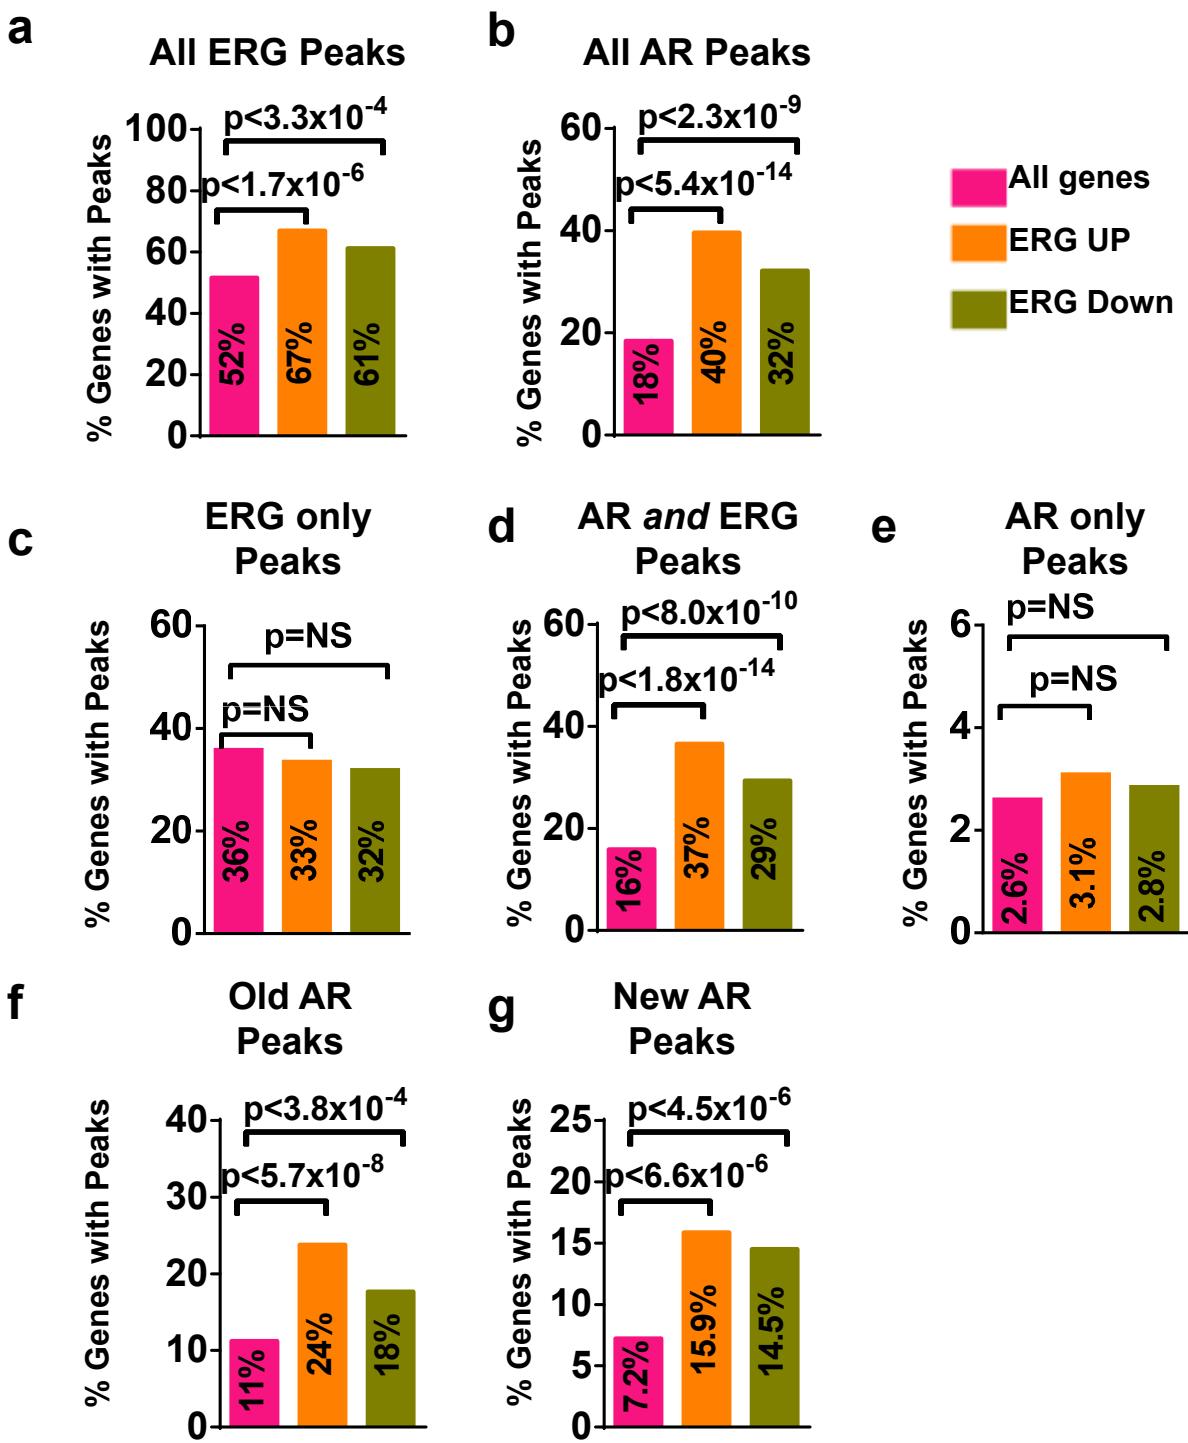

Supplementary Figure 13. Serum testosterone levels. Serum testosterone was assayed using ELISA in 6-month old mice ($n = 6$, mean \pm SD).

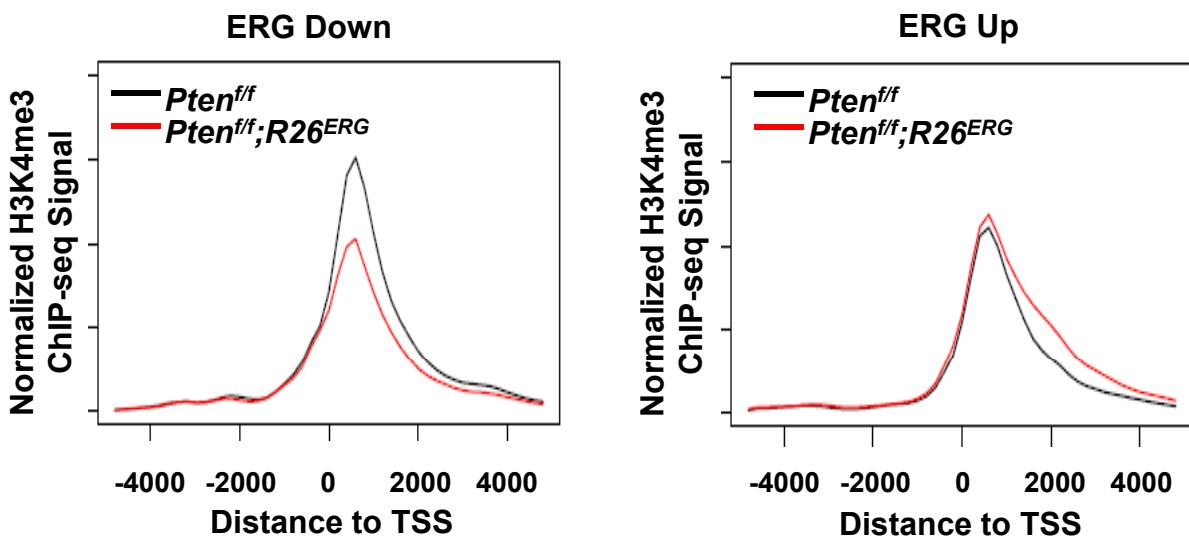

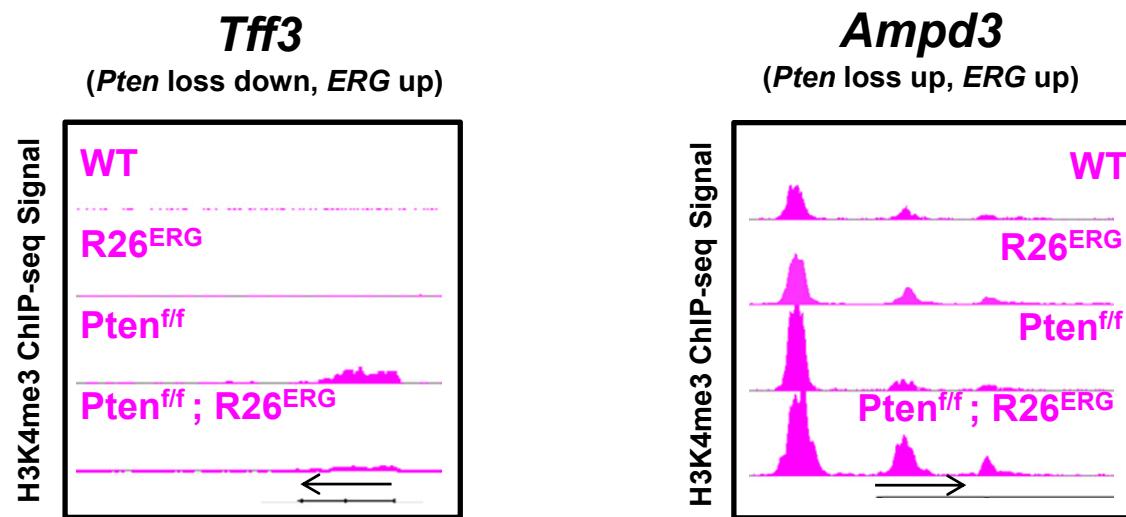

Supplementary Figure 14. MEME motif analysis of mouse prostate ChIP-Seq. The consensus sequence motif identified by MEME in the ERG peaks in $R26^{ERG}$ prostates and in AR peaks in both WT and $R26^{ERG}$ mouse prostates.

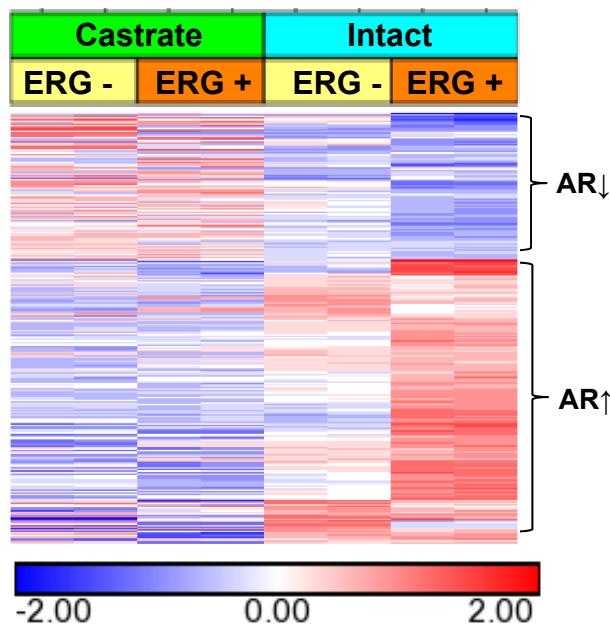

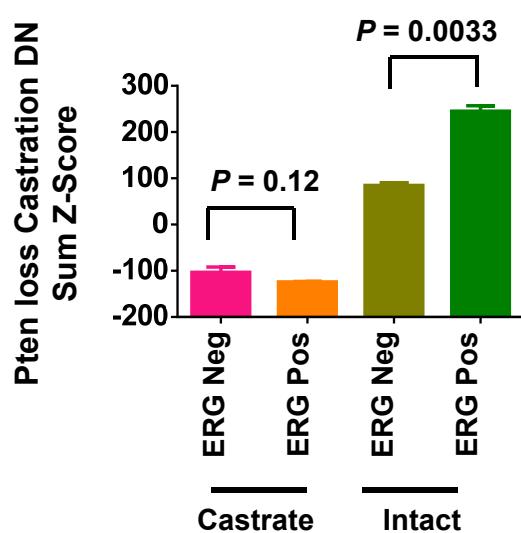

Supplementary Figure 15. Gene expression analysis of ERG expression in *Pten^{WT}* type and *Pten^{ff}* prostate. Volcano plots of fold change (x-axis) and FDR (y-axis) showing that only 20 genes are affected by ERG expression in Pten wild-type but many more are affected by ERG expression in Pten loss. Green lines are FDR=0.3 and fold-change=1.5. The microarray contained a probe for EGFP, which is highly and significantly overexpressed.

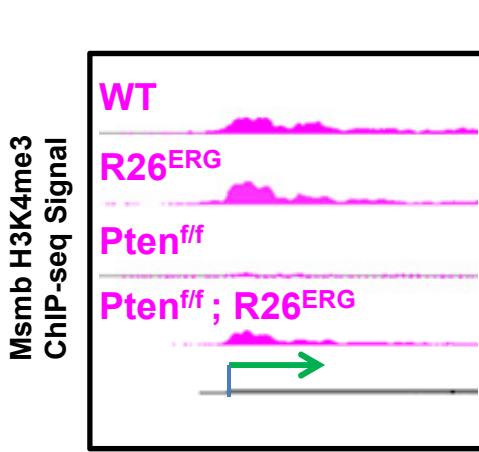

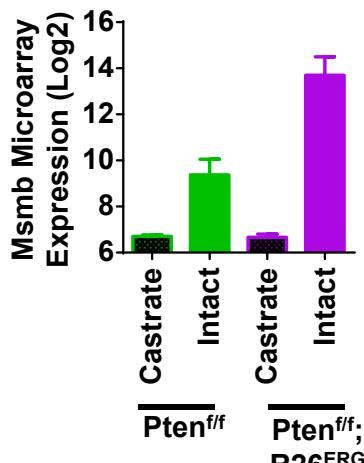

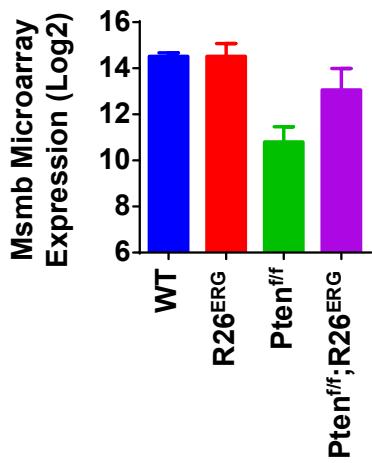

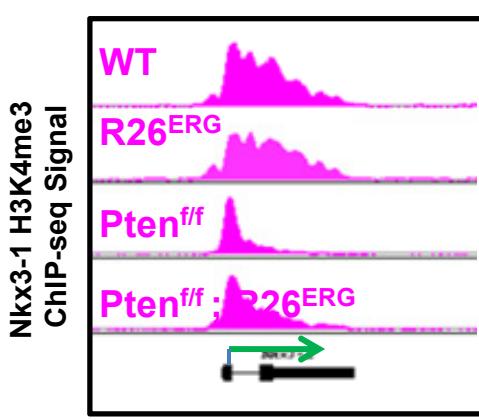

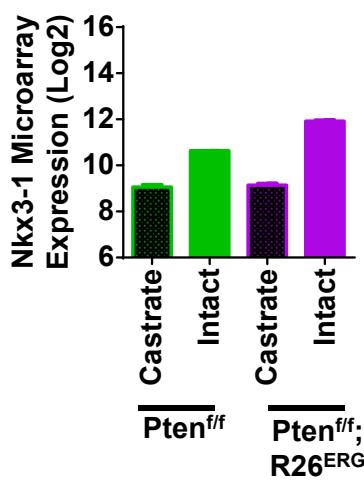

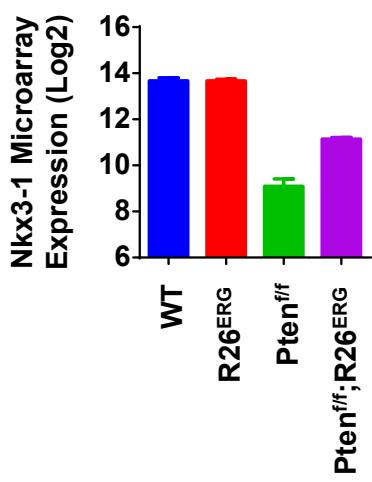

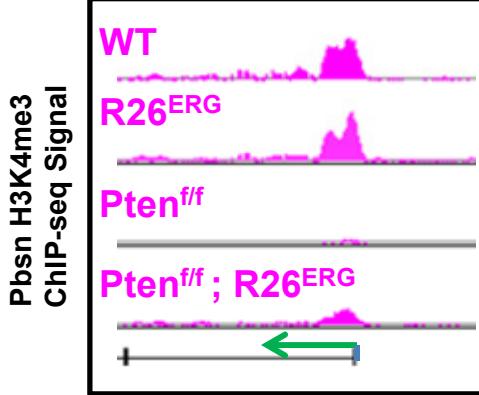

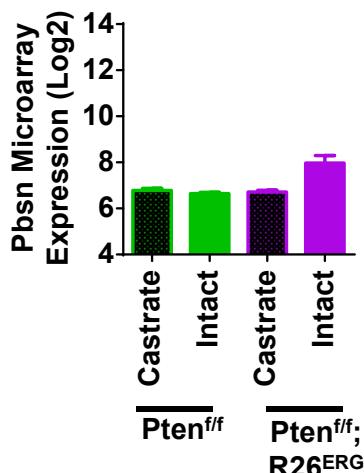

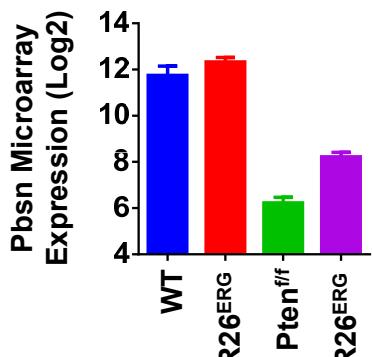

Supplementary Figure 16. Cistrome and transcriptome integration of mouse prostates. Plot of percentage of *ERG*-upregulated and down-regulated genes in the *Pten* loss background (*Pten*^{fl/fl};R26^{ERG} vs *Pten*^{fl/fl}) with ChIP-seq peaks. (a) All ERG peaks are defined by the peaks found in *Pten*^{fl/fl};R26^{ERG} mice shows ERG regulated genes are enriched for ERG binding. (b) All AR peaks defined by peaks found in *Pten*^{fl/fl};R26^{ERG} mice shows ERG regulated genes are enriched for AR binding. (c-e) ERG only peaks are genes with only ERG peaks, AR and ERG peaks as genes with both, and AR only peaks as genes with only AR peaks. This shows ERG regulated genes are enriched for those with both ERG and AR peaks. (f, g). Old AR peaks as genes in *Pten*^{fl/fl} with AR peaks and new AR peaks as genes with AR peaks only in *Pten*^{fl/fl};R26^{ERG} mice.

a**b**

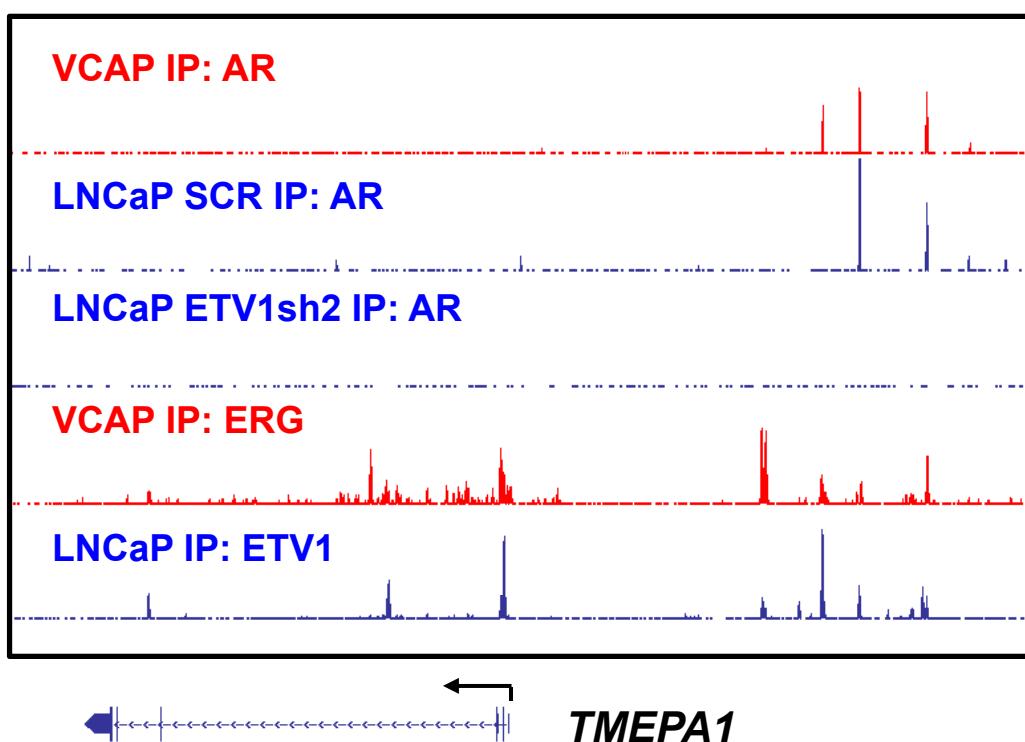

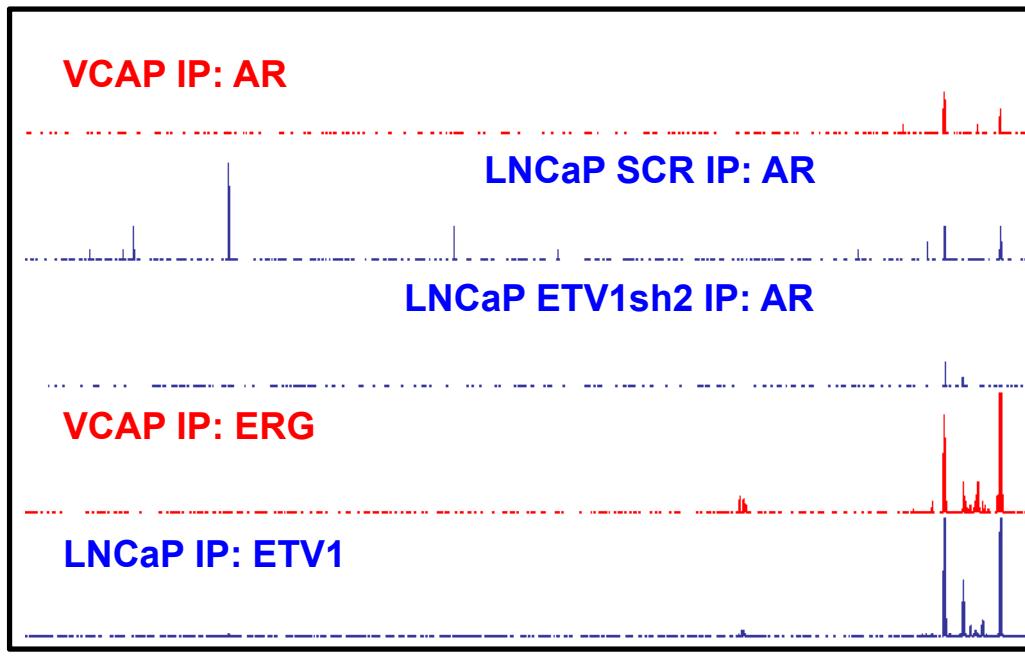

Supplementary Figure 17. Integration of H3K4me3 peaks with gene expression. (a) Normalized average H3K4me3 ChIP-seq profile of ERG positive and ERG negative prostates of ERG upregulated and ERG downregulated genes in the setting of $Pten$ loss. (b) H3K4me3 ChIP-seq profile around the *Tff3* and *Ampd3* genes.

a**b**

Supplementary Figure 18. Expression profile of castrate and intact Pten loss mouse prostates. (a) Intact and two-day castrate six month old *Pten^{ff}* and *Pten^{ff} R26^{ERG}* prostates ($n = 2$ each) were profiled. Hierarchical clustering of genes differentially expressed by castration ($P < 0.05$, FC > 2.0) is shown suggesting that AR-downregulated genes (castration up) are further downregulated by ERG expression and AR-upregulated genes are further upregulated. (b) Sum expression score (sum of the positive of Z-score of AR-upregulated and negative of Z-score of AR-downregulated genes) shows statistically significant increase of AR-regulated gene expression in ERG-positive prostates (mean \pm SD).

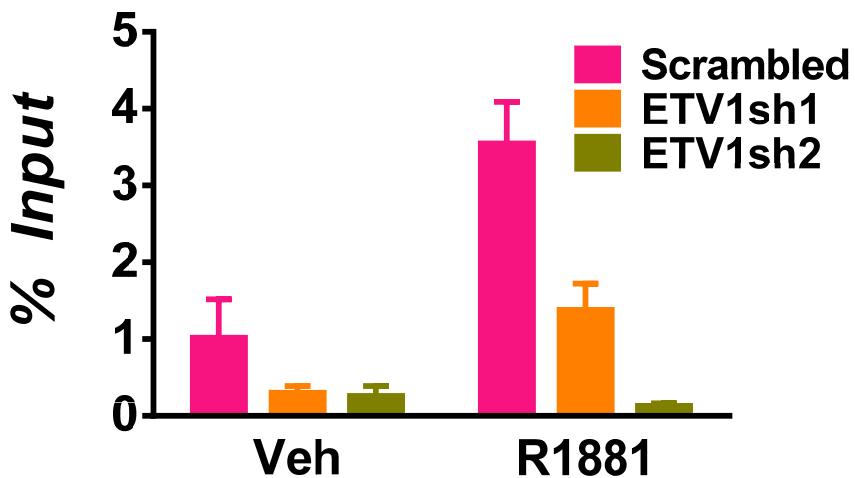

Supplementary Figure 19. Examples of gene expression of AR regulated genes *Pbsn*, *Nkx3-1*, and *Msmb* and H3K4me3 ChIP-seq profile. Plots of microarray gene expression from profiling of 4-month old WT, *R26^{ERG}*, *Pten^{ff}* and *Pten^{ff}*; *R26^{ERG}* mice (left column), H3K4me4 profile of an independent set of mice (right column), and gene expression from profiling of 6-month old castrated and intact *Pten^{ff}* and *Pten^{ff}*; *R26^{ERG}* mice (middle column). Plots are mean \pm SD.

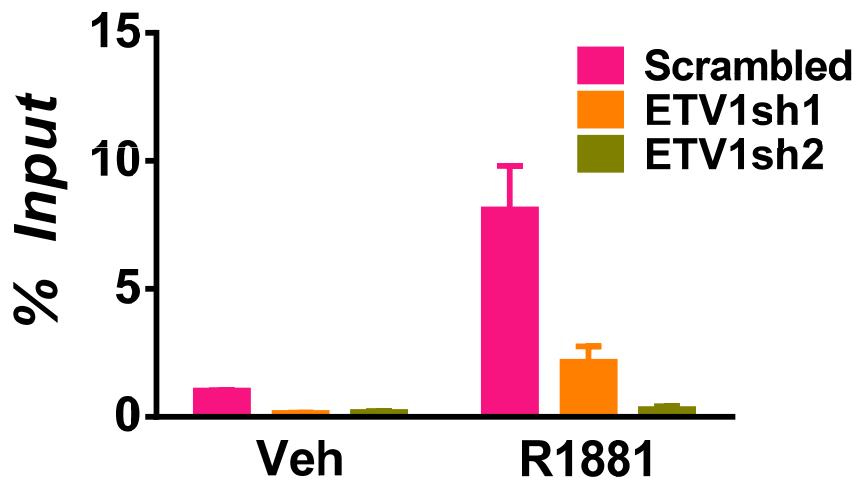

Supplementary Figure 20. ChIP-seq profiles at *FKBP5* and *TMEPA1* locus. Shown are ERG and AR ChIP-seq profiles in VCAP cells and ETV1 ChIP-Seq profile of unperturbed LNCaP cells and AR ChIP-seq of LNCaP cells infected with scrambled and *ETV1sh2* shRNA.

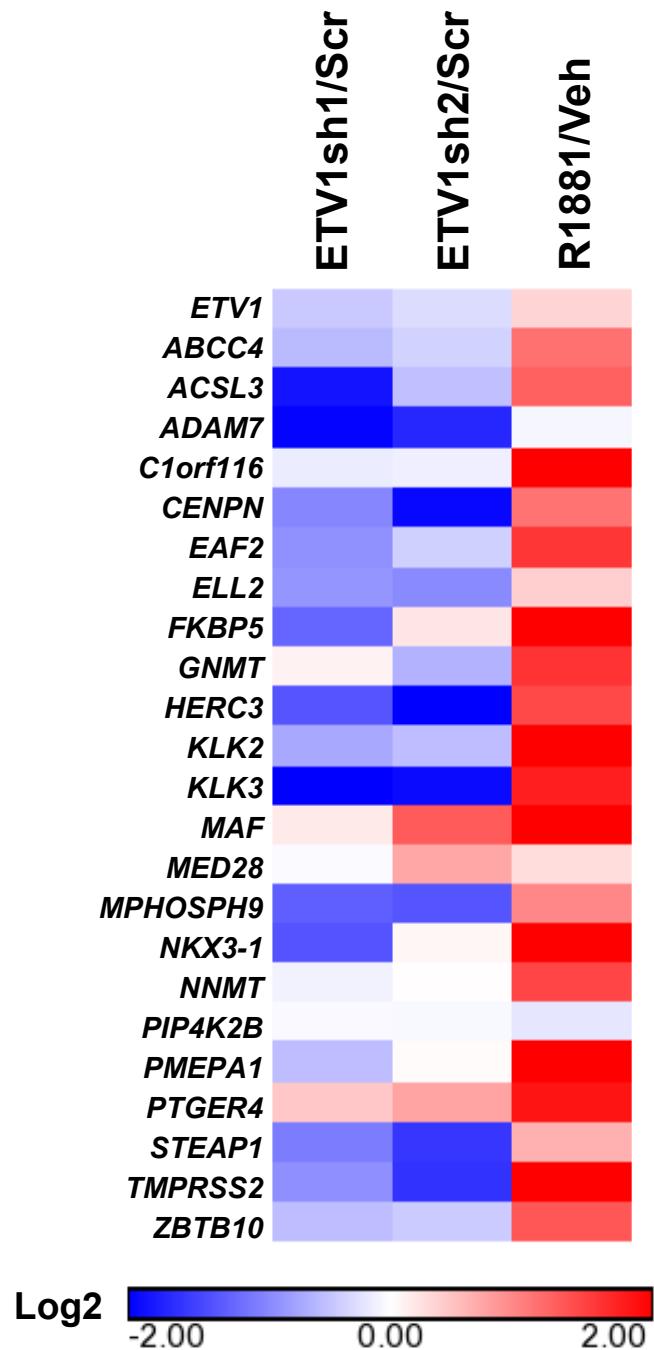

KLK3 Enhancer

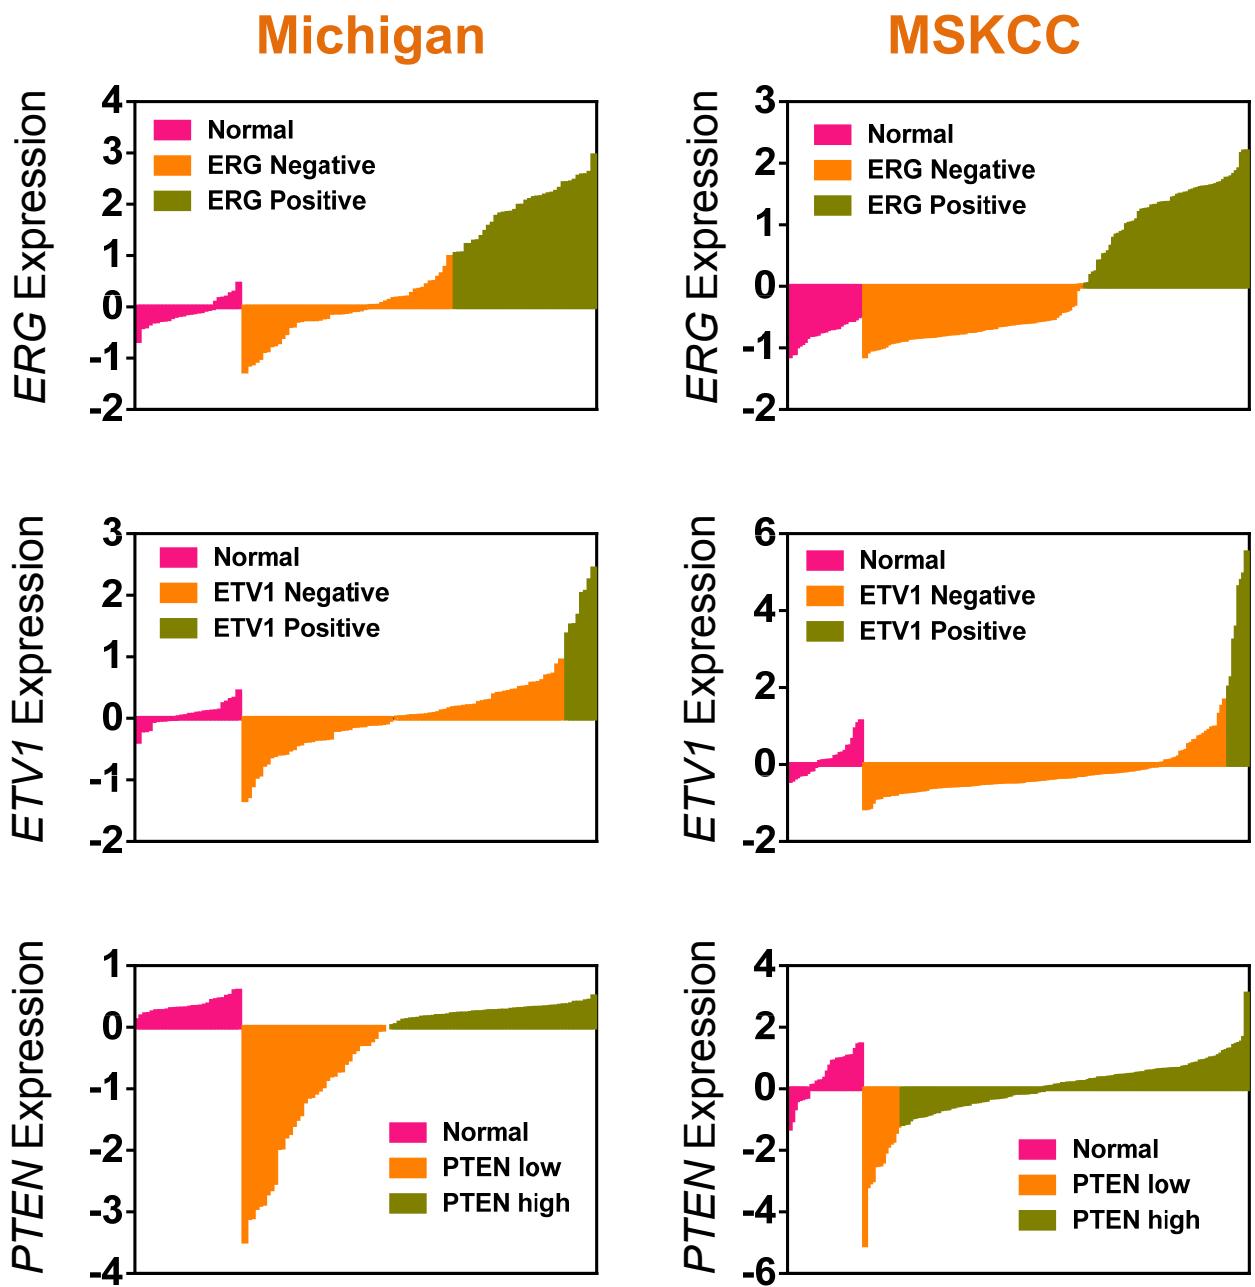

TMPRSS2 Enhancer

Supplementary Figure 21. ChIP-qPCR of AR IP in LNCaP cells. LNCaP cells were infected with scrambled or two different *ETV1* hairpins for 72-hours and subsequently treated with vehicle or R1881 for 8 hours prior to chromatin harvest and qPCR.

Supplementary Figure 22. Heatmap of change in expression of AR signature genes induced by two *ETV1* hairpins and by R1881 in LNCaP cells.

Supplementary Figure 23. Expression of *ERG*, *ETV1*, and *PTEN* in University of Michigan and MSKCC datasets. Cutoffs used for analysis is shown. Of note is the increased number of PTEN low samples in the Michigan autopsy dataset enriched for castration-resistant disease compared to the MSKCC prostatectomy dataset.
