

Supplemental Figure 1. Directed Acyclic Graph Representing a Genotype-Based Analysis of the Effects of Circulating Levels of Nutritional Biomarkers on Cognitive Capability

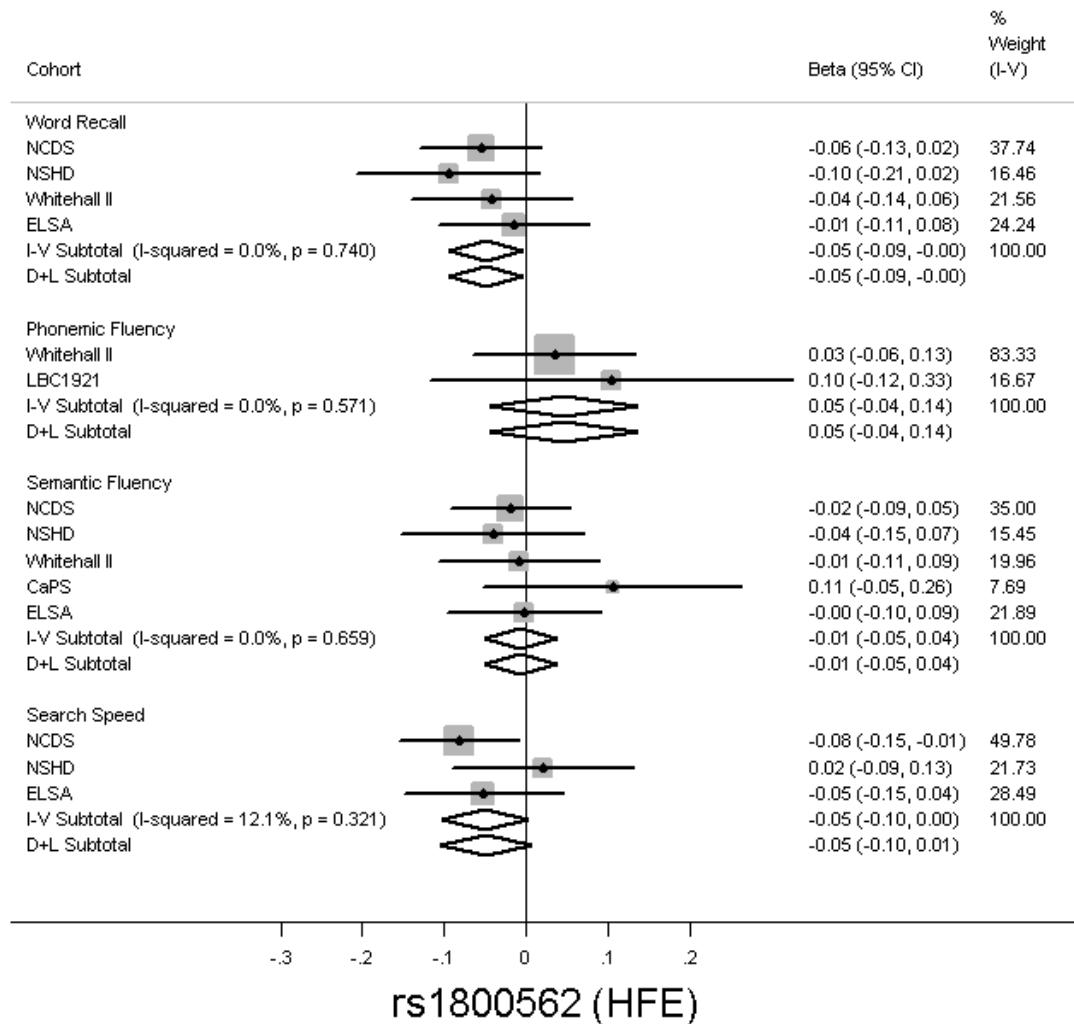

Genotypes, (e.g. SNP rs6564851) are strongly associated with a nutritional biomarker (e.g. β -carotene) but are not associated with confounders (e.g. levels of physical activity) and are not implicated in measures of cognitive capability except through their effects on the nutritional biomarker.

Supplemental Figure 2. Associations between Cognitive Capability Measures and rs4820268 (TMPRSS6) Genotype

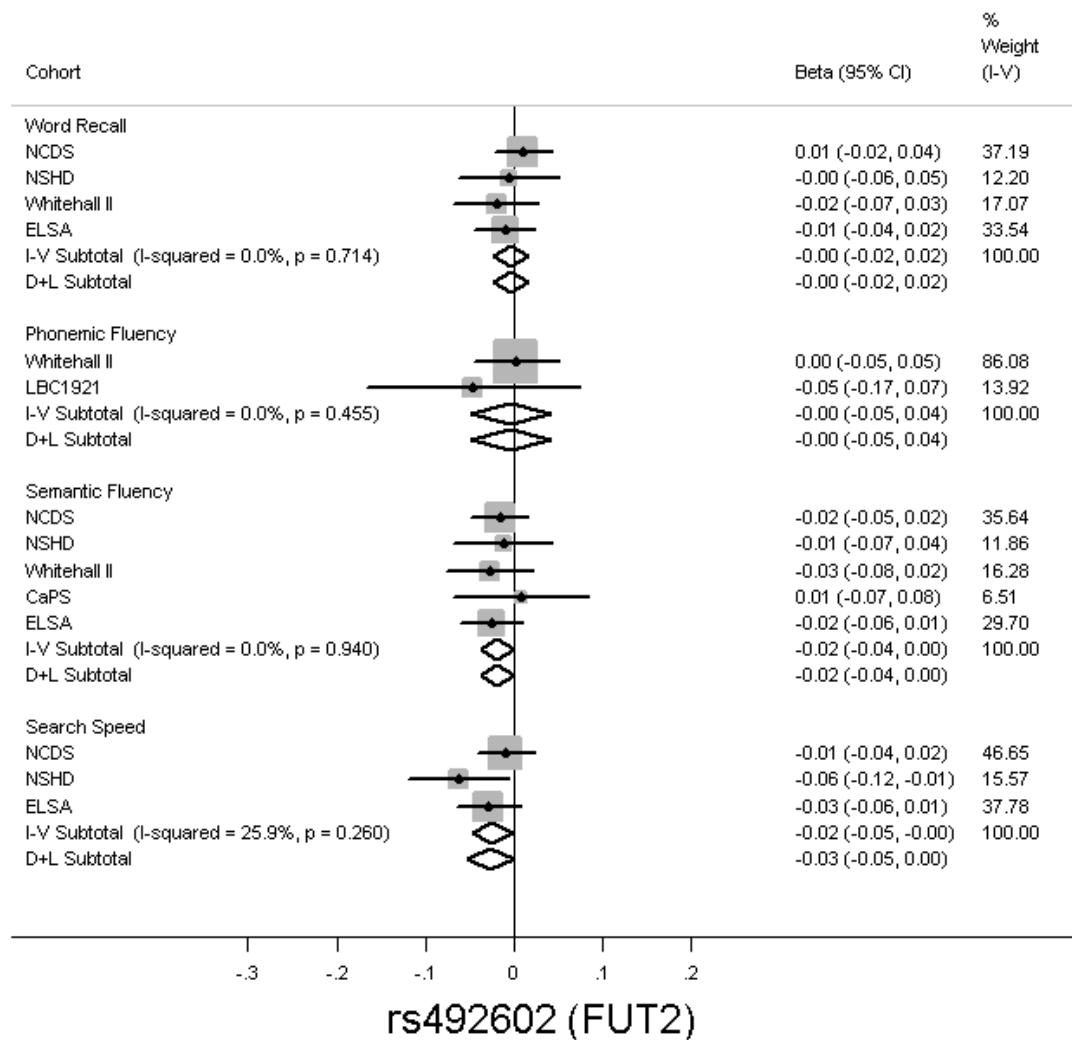

Beta coefficients based on z-scores per A allele adjusted for age, sex, height and weight.
